*Vincent Vasquez, CLERK*

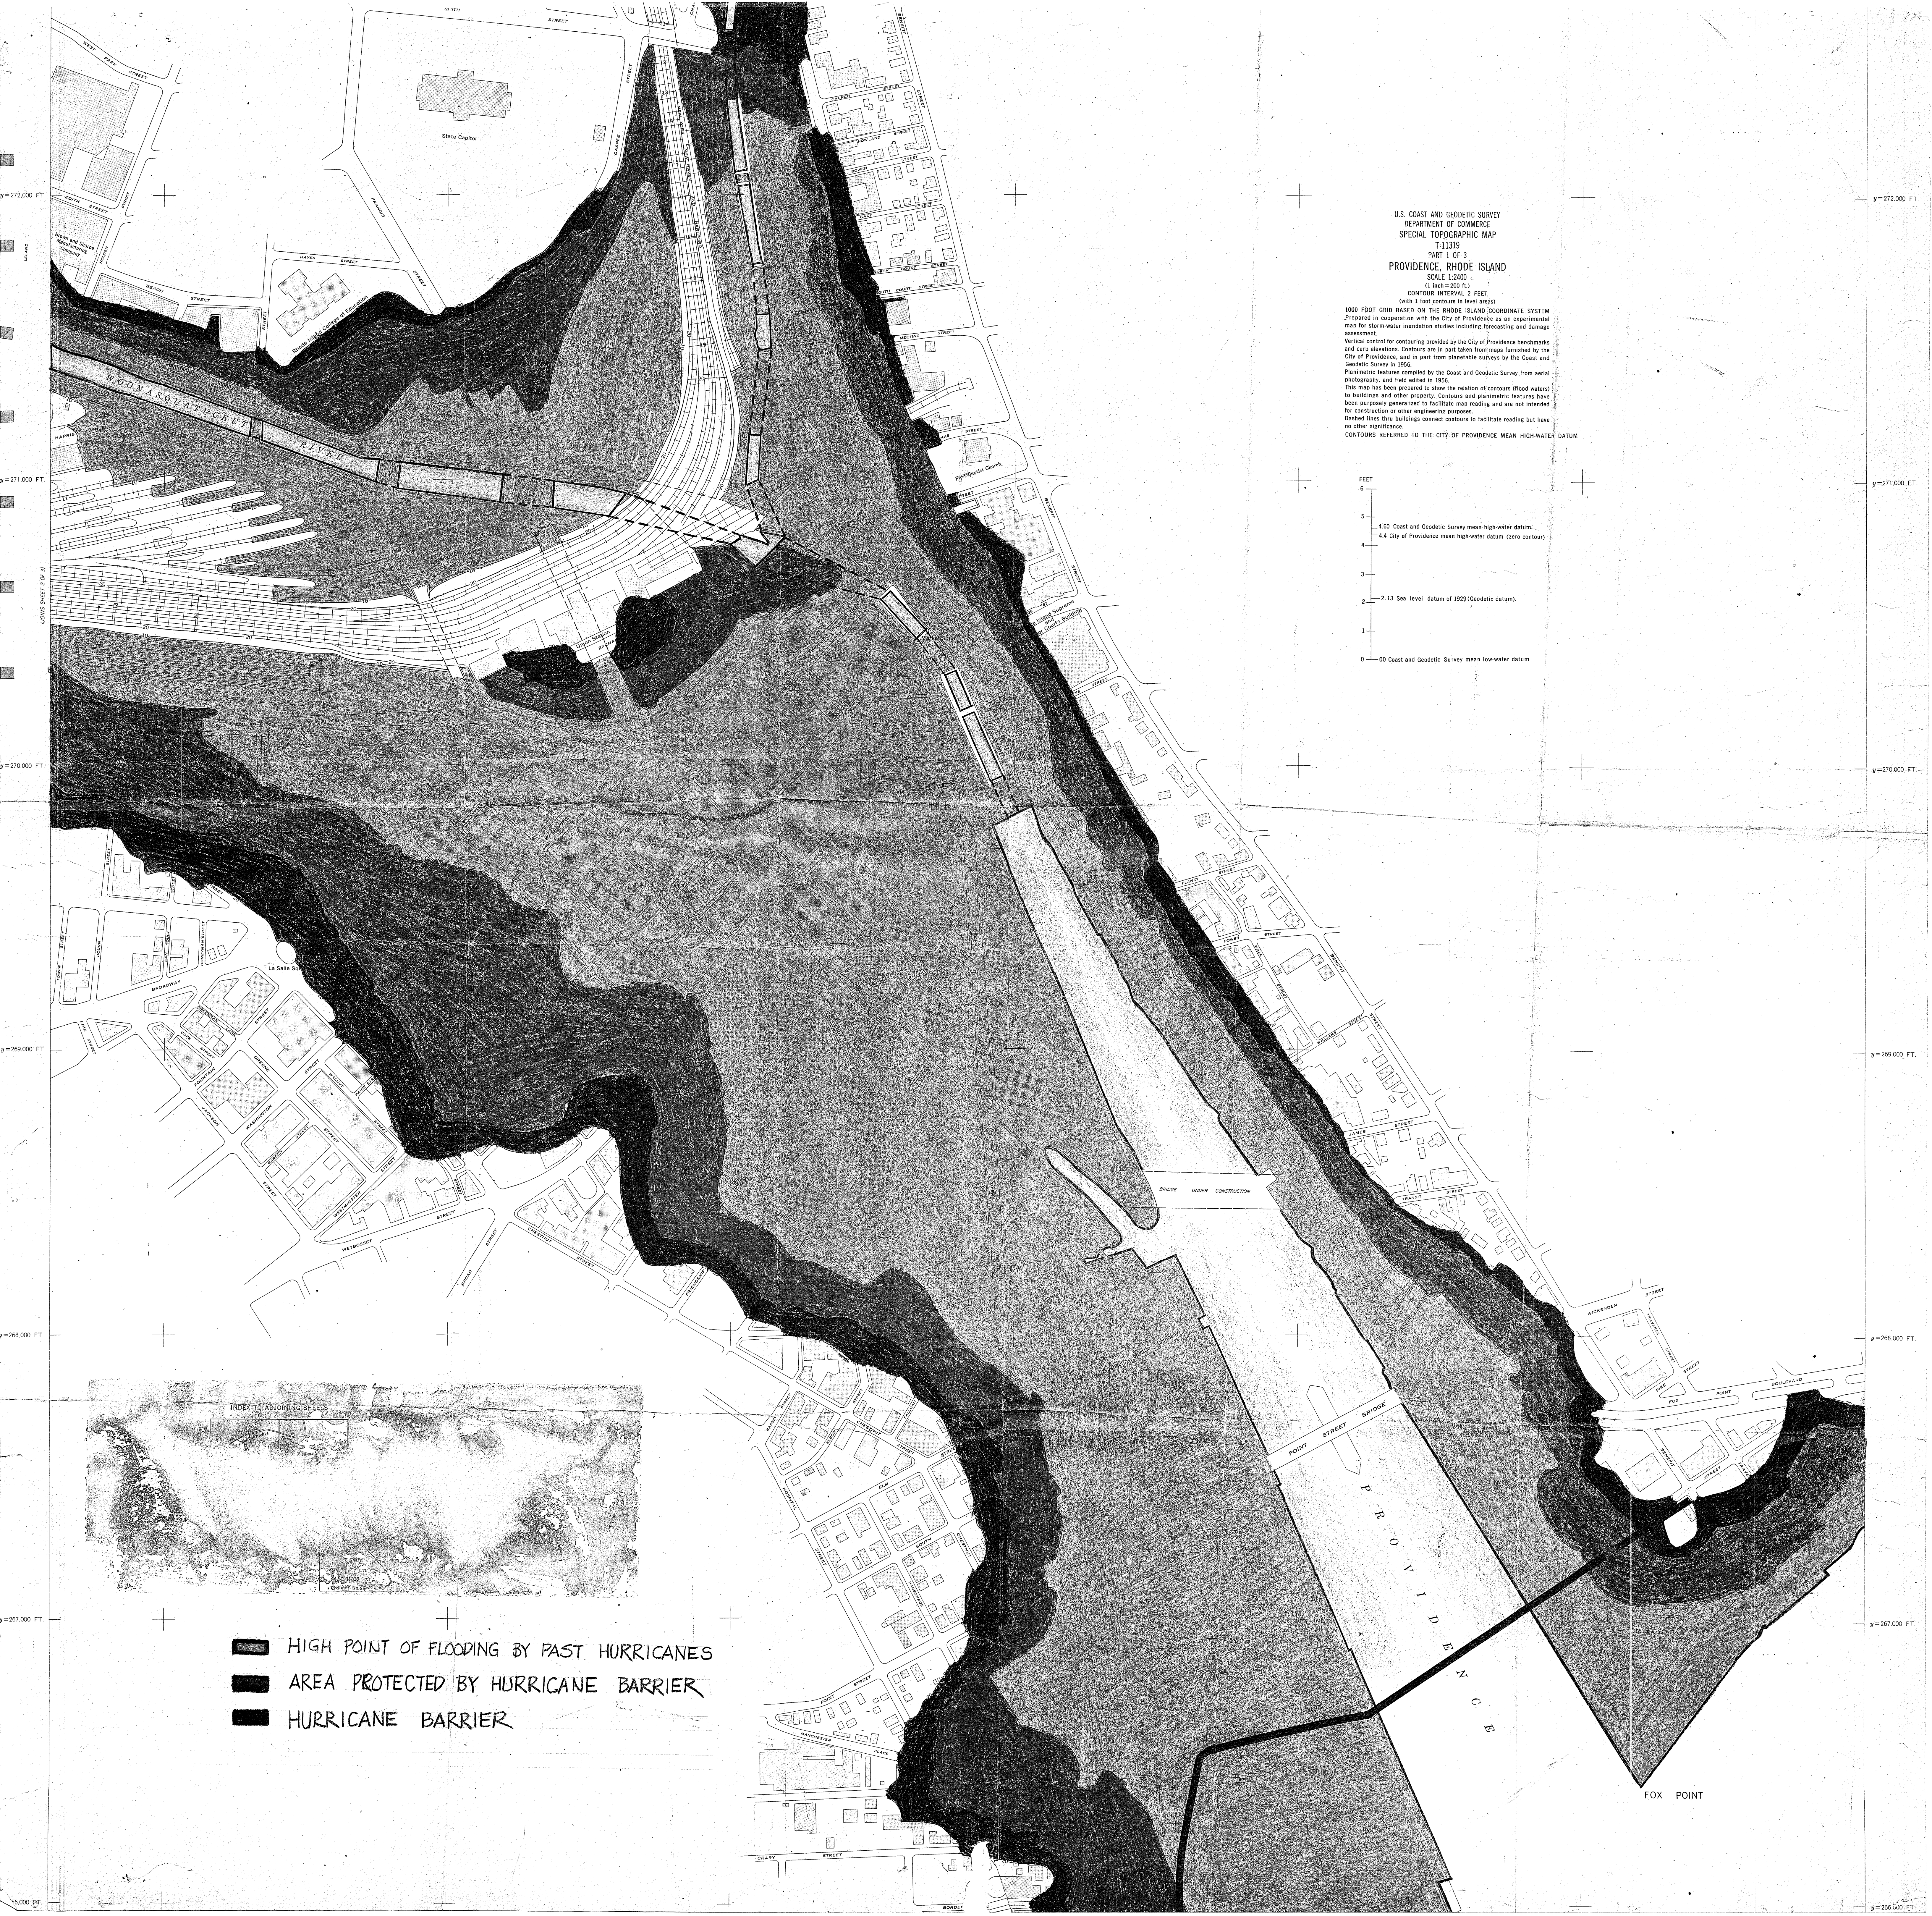

CITY PLAN COMMISSION  
PROVIDENCE, RHODE ISLAND

U.S. COAST AND GEODETIC SURVEY  
DEPARTMENT OF COMMERCE  
SPECIAL TOPOGRAPHIC MAP  
T-1319

PART 1 OF 3  
PROVIDENCE, RHODE ISLAND  
SCALE 1:2400  
(1 inch=200 ft.)

CONTOUR INTERVAL 2 FEET  
(with 1 foot contours in level areas)

1000 FOOT GRID BASED ON THE RHODE ISLAND COORDINATE SYSTEM  
Prepared in cooperation with the City of Providence as an experimental  
map for storm-water inundation studies including forecasting and damage  
assessment.

Vertical control for contouring provided by the City of Providence benchmarks  
and curb elevations. Contours are in part taken from maps furnished by the  
City of Providence, and in part from planetable surveys by the Coast and  
Geodetic Survey in 1956.

Planimetric features compiled by the Coast and Geodetic Survey from aerial  
photography, and field edited in 1956.  
This map has been prepared to show the relation of contours (flood waters)  
to buildings and other property. Contours and planimetric features have  
been purposely generalized to facilitate map reading and are not intended  
for construction or other engineering purposes.

Dashed lines thru buildings connect contours to facilitate reading but have  
no other significance.

CONTOURS REFERRED TO THE CITY OF PROVIDENCE MEAN HIGH-WATER DATUM
