

THE CITY OF PROVIDENCE
STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS

RESOLUTION OF THE CITY COUNCIL

No. 269

Approved May 13, 1978

WHEREAS, Home Rule Government affords local Government greater power in managing its own affairs, and

WHEREAS, A group of Providence Citizens known as the Committee for Home Rule Charter in Providence, are seeking to educate the Providence Electorate of the advantages of adopting a Home Rule Government in our City, and

WHEREAS, The Committee for a Home Rule Charter in Providence has launched a Campaign to gather signatures on Petitions in support of Home Rule Government for our City,

NOW, THEREFORE, BE IT RESOLVED, That the City Council and the Mayor hereby proclaim the Month of May, 1978 as "Home Rule Month" and urge all the Citizens of Providence to support the Home Rule Alternative for Providence.

IN CITY COUNCIL
MAY 4 1978
READ AND PASSED

Ralph Liguori PRES.
Rose M. Mendonca CLERK

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand what consumers want and what problems they are facing. Once a need is identified, the next step is to develop a concept that addresses this need. This often involves brainstorming and prototyping to refine the idea.

2. After a concept is developed, the next step is to create a business plan. This document outlines the financial aspects of the product, including the costs of production, distribution, and marketing. It also includes a sales forecast and a timeline for when the product will be launched. A business plan is essential for securing funding from investors or lenders.

3. Once the business plan is complete, the next step is to secure funding. This can be done through a variety of methods, including crowdfunding, venture capital, or bank loans. Each method has its own requirements and risks, so it's important to choose the one that best fits the product and the entrepreneur's goals.

4. After funding is secured, the next step is to develop a prototype. This is a physical model of the product that can be used to test the concept and gather feedback from potential customers. Prototyping is a crucial step in the product development process, as it allows entrepreneurs to identify and address any issues before full-scale production.

5. The final step in the process is to launch the product. This involves creating a marketing campaign to promote the product and generate sales. A successful launch requires a combination of effective marketing, good timing, and a strong understanding of the target market. Once the product is launched, entrepreneurs should continue to monitor sales and customer feedback to make any necessary adjustments.
