TRAFFIC ENGINEERING DEPARTMENT

ANNUAL REPORT

1967

CITY OF PROVIDENCE, RHODE ISLAND

Frank A. Tibaldi
~~CONSULTANT~~
Traffic Engineer

JOSEPH A. DOORLEY, JR.
MAYOR

TRAFFIC ENGINEERING DEPARTMENT
147 FOUNTAIN ST., PROVIDENCE, R. I. 02903 Telephone 331-7510

February 1, 1968

The Honorable Joseph A. Doorley, Jr.
Mayor of Providence
The Honorable City Council
Providence, Rhode Island

Gentlemen:

We are hereby submitting for your consideration the Annual Report of your Traffic Engineering Department for 1967. This department was established by the adoption of Ordinance No. 592, approved October 21, 1948; and the department has been in active operation since March 1, 1949.

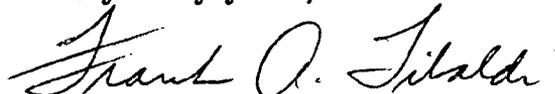

This report is compiled to review the activities of the department, including physical changes that have been made in the street system, changes in traffic regulations, and a breakdown of annual expenditures necessary to continue this effort.

The problem of better use of existing streets will continue to be one of the department's major functions. The modernization program of updating traffic signs, signals and markings will also be continued to bring all traffic devices into national conformity.

The shortage of engineers and technical personnel has slowed the operations of this department. We hope to be able to remedy this situation by reorganizing the department, and requesting new positions for technical employees.

Through your continued support we hope that a safe, efficient transportation system can be assured for Providence.

Very truly yours,

Frank A. Tibaldi
Traffic Engineer

CLERK

INTRODUCTION

It is the policy of this department to provide the City of Providence with the best possible use of our existing street system.

Processing of the continuous stream of traffic requests and complaints constitutes a large part of the department work. From the time the request is made until the time our crews install the traffic controls on the street, appropriate surveys must be made, and pertinent information compiled to assure a proper evaluation. The principle behind gathering this information is to place any decisions regarding changes in control or regulation on a factual basis, rather than on a basis which relies strictly on personal opinion.

When the decision is made, and the traffic regulation written, notification is sent to the shop superintendent to implement the traffic orders, and copies of the traffic regulation are sent to the Commissioner of Public Safety, various Police divisions, the City Solicitor, the Chamber of Commerce, the appropriate councilmen, and the Press.

All traffic regulation changes are advertised once a month in one issue of the Providence newspaper, in accordance with the provisions of Ordinance No. 592. When the necessary signs, signals, painting, etc., are completed, the regulation becomes effective.

TRAFFIC ENGINEERING DEPARTMENT ORGANIZATION

Traffic Engineering Advisory Committee

Mayor Joseph A. Doorley, Jr., Chairman

DEPARTMENT OF FINANCE
CITY HALL, PROVIDENCE, RHODE ISLAND 02903

January 31, 1968

To the Honorable Joseph A. Doorley, Jr., Mayor
and the Honorable, The City Council

As directed by ordinance, I am submitting this, the annual report of the Personnel Department for the year beginning October 1, 1966 and ending September 30, 1967.

The Personnel Department of the City of Providence, lacking neither experience nor effort continues to strive for maximum efficiency.

Now in its sixteenth year, the Personnel Department again wishes to thank the various department heads for their co-operation and assistance in fulfilling the requirements of this office and its obligations to the citizens of Providence.

My sincere thanks are extended to His Honor, the Mayor and the City Council, the City Solicitor, the Finance Director and the Budget Officer for their co-operation during the past year.

I look forward to their ever-increasing support.

Respectfully submitted,

John V. Romano

CLERK

DEPARTMENT FUNCTIONS

The Providence City Charter provides that the Personnel Director is responsible for the administration and control of personnel policies for \$14,911,621.35 in pay and benefits during the 1966-67 fiscal year.

Included in the administration of personnel policies are the constant maintenance of record keeping, such as sick pay credits, accrued and used, absenteeism, vacation periods and claims for injured pay.

The Director of Personnel attends Retirement Board meetings in an advisory capacity whenever necessary.

JOB REFERRALS

The Personnel Office continues to assist private industry throughout Metropolitan Providence by obtaining willing applicants for existing vacancies in various enterprises.

This is accomplished by a joint effort of the Personnel Executives' Club, a division of the Greater Providence Chamber of Commerce of which the Personnel Director is a member.

There exists several positions within the City of Providence which are of a professional nature and remain vacant. This is perhaps due to salaries that are non-competitive with those offered in private industry.

Measures presently under study by the administration however, may eventually eliminate this particular handicap.

INJURY PAY

By ordinance, city employees are insured against accidental injuries-sustained while in the regular performance of their duties.

Injured pay claims are received by the Personnel Office, thoroughly investigated and subsequently referred to the Commission for the Relief of Injured Employees for disposition.

In such event, a maximum of \$1200.00 in wages becomes available to the employee through regular weekly pay checks.

During the year 1966-67 many petitions for injury pay were presented to the Commission out of which one-hundred and three (103) were approved at regularly scheduled meetings.

Authorized payments totaled \$142,586.02.

EMPLOYEE IDENTIFICATION

Employee records include individual identification badges (I.D. Cards) which are laminated and indexed. As a departmental regulation, employees are photographed and issued I.D. badges upon entering city service.

In addition, periodic investigations of employees are made by the Personnel Director, together with representatives of the City Controller's Department. Employees' pay checks are hand delivered on-the-job where individual badges are examined for accuracy and signatures obtained for certification.

In the absence of advance notice-of-inspection to departments, (which is necessary to achieve the desired result) supervisors and employees occasionally resent the element of surprise used, in that their integrity may be questioned.

However, full co-operation is received and always appreciated by the Personnel Office.

PERSONNEL CHANGES

On February 27, 1967 a major accomplishment occurred when various departments were consolidated and incorporated into the Department of Planning and Urban Development.

These included the Division of Minimum Housing, the City's Planning Department, the Family and Business Relocation Service and the former Redevelopment Agency.

The advantages of this consolidation are many.

A brief analysis immediately obviates the merits of the consolidation, as evidenced by the elimination of duplicitous duties, responsibility in its proper perspective and additional financial augmentation through available federal programs.

Various other minor personnel changes were requested and approved by the Personnel Office and the City Council during the year 1966-67.

DIRECTIVE

On August 11, 1967 an administrative directive was received by the Personnel Office.

As issued - Executive Order No. 5 gave notice that discriminatory practices of any kind would not be tolerated and called for implementation of safeguards.

The Personnel Office and the Providence Human Relations Commission are jointly preparing regulations which are soon to be presented for acceptance and probable adoption.

BREAKDOWN OF PERSONAL SERVICES EXPENDITURES

001	Salaries and Wages Permanent Positions	\$11,933,824.10

Main entrance to multi-million dollar Water Purification Works with south coagulation basin in the foreground.

October 1, 1967

The Honorable Joseph A. Doorley, Jr., Mayor
The Honorable Members of the City Council
City of Providence, Rhode Island

Gentlemen:

We are submitting the 27th Annual Report of the Water Supply Board that highlights, in abbreviated text and pictorial form, the important operations and activities of the department during the fiscal year ended September 30, 1967.

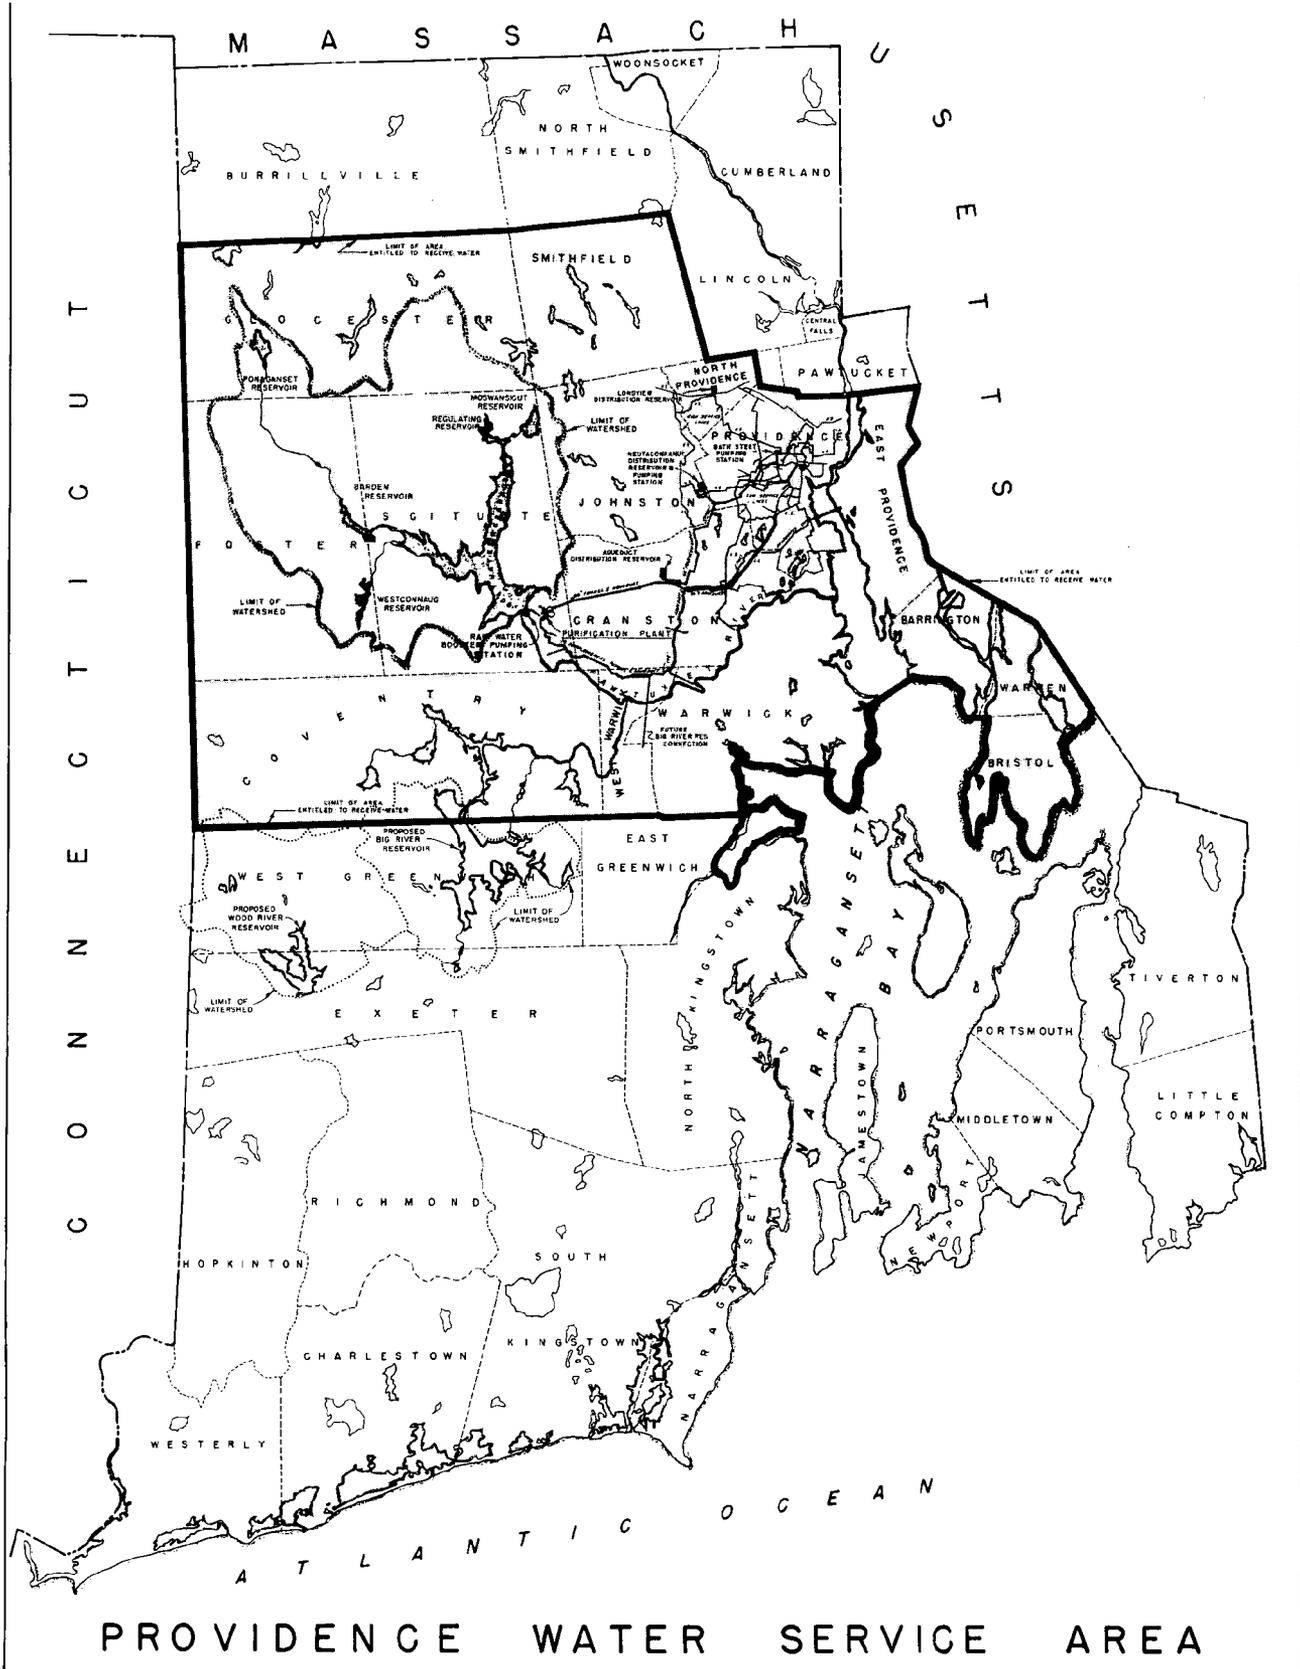

The ability to meet all demands on our system is due to the long-range plans of the Original Water Supply Board appointed in 1915 and the continuation of this policy by the present Board. Our Capital Improvement Program, based on the department's projective studies, will provide sufficient capacity to meet the system's requirements up to the year 2015. The Board is proud of the numerous improvements made to our system and its continued national reputation of producing an excellent quality of water.

The department realizes, Mr. Mayor, that we would not be able to accomplish our Capital Improvement Program without your leadership and guidance and the assistance of the members of the City Council. We are grateful for the cooperation of the U. S. Department of Commerce, particularly the officials of the Regional Office of the Economic Development Administration and the help received from other governmental agencies, industrial organizations and the public. The Board wants to publicly thank the 179 employees of the department for the dedicated manner in which they performed their duties throughout the year.

Respectfully submitted,

John A. Doorley, Jr.
Chairman
WATER SUPPLY BOARD
PROVIDENCE, R.I.

FILED

PROVIDENCE REGIONAL WATER SERVICE AREA

The map of the State of Rhode Island, shown on the opposite page, outlines the fifteen cities and towns that are entitled by law to receive water from the Scituate drainage basin. The Providence service area totals 415.71 square miles which is 22 times the area of the City of Providence. The land area of the entire State is only 1,058 square miles so our service territory represents 39.3% of Rhode Island.

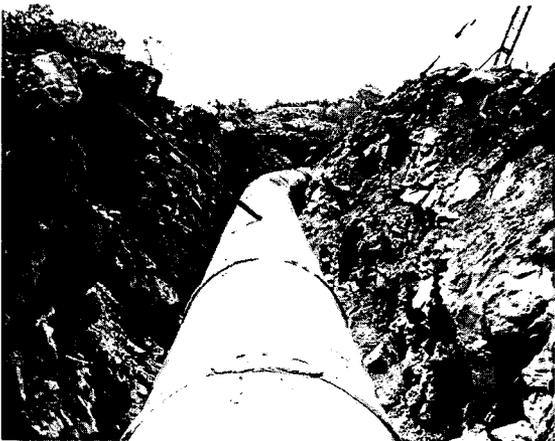

Although municipally owned, the Providence Water Works has operated as a regional or metropolitan district from its very inception over 100 years ago. At the present time, in addition to the City of Providence, the City of Cranston and the Towns of Johnston and North Providence are supplied from a distribution system owned and maintained by Providence. The City of Warwick, the Kent County Water Authority supplying parts of Scituate, West Warwick and Coventry, the East Smithfield Water District and the Town of Smithfield are supplied by Providence but own and maintain their own distribution systems. Water to these latter communities is supplied through master meters. The population served in these areas during 1967 was estimated to be 388,420 against an estimated population for the State of Rhode Island of 912,195 or 42.6%.

As early as 1949, the City of Providence offered to supply East Providence and the three communities served by the Bristol County Water Company with water from our Scituate supply. No action was taken until 1963 when the City of East Providence introduced legislation in the General Assembly that would amend the 1915 Water Act and permit them to obtain water from our system. In 1966 legislation was enacted and the Act amended to allow the Towns of Barrington, Warren and Bristol, which are served from the investor-owned Bristol County Water Company, to obtain a supply from Providence. The City of East Providence should be connected to the Providence system by 1970 and the other three communities shortly thereafter. Based on 1967 estimated population figures, the cities and towns presently served plus the four additional communities authorized to obtain their supply from Providence will represent a total population of 477,900 or 52.4% of the estimated population of the State. Two other towns are entitled to water under the early Act. They are Foster and Coventry but up to the present time, there is no public water supply in either of these communities.

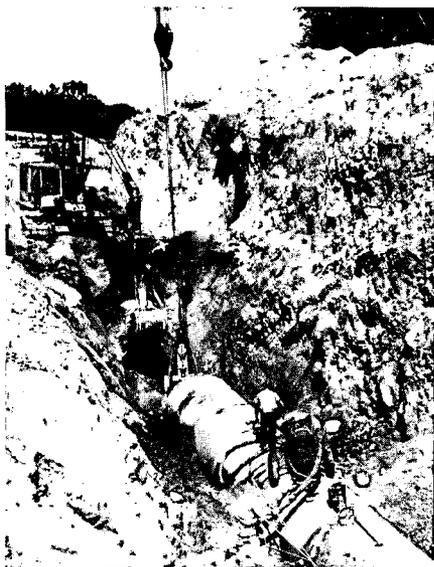

MAJOR CONSTRUCTION PROJECTS

Work progressing on the installation of the 78" prestressed reinforced concrete steel cylinder pipe section of the Supplemental Tunnel and Aqueduct.

Completing the installation of the 78" pipe after ledge had been removed.

Trench had to be excavated for a depth of 35 ft. in this section of the new work.

It has always been the aim of the department to conduct long-range projective studies to assure that Providence and all the other cities and towns dependent upon our supply, now and in the future, receive water of outstanding quality and in sufficient quantity to meet the requirements of residential, commercial and industrial use as well as adequate public and private fire protection. In order to fulfill our obligations to all these cities and towns, the department is engaged in a large capital improvement program that will cost approximately \$16,200,000.

TUNNEL AND AQUEDUCT—At present, we have a single tunnel and aqueduct that extends from the plant in Scituate to the siphon chamber in the City of Cranston. It was designed over 50 years ago and is capable of delivering 100 million gallons per day into our system. Our maximum daily demand is around 90 million gallons and if East Providence, Barrington, Warren and Bristol were connected to our supply lines, our transmission facilities would not be adequate. The maximum daily potential from our present source of supply in Scituate is 144 million gallons which is twice the dependable safe yield that is available for water supply purposes.

To provide the necessary transmission capacity to convey the full output from Scituate, we are constructing another tunnel and aqueduct that will be capable of delivering an additional 44 million gallons daily from the plant. This section is 78 inches in diameter and is approximately 23,000 feet in length. It will terminate at tunnel portal No. 4 located at the easterly end of the West Warwick Country Club. There is a 30-inch connection in the 78-inch aqueduct section near Clinton Street in

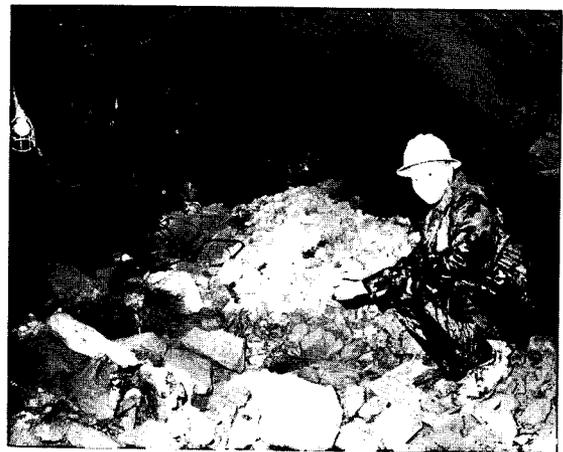

the Town of Scituate that will reinforce the rapidly growing Kent County Water Authority system in West Warwick, Coventry and parts of Scituate.

Portal No. 4 is designed to eventually receive a supplementary supply of 56 million gallons daily from the proposed Big and Wood River Reservoir development. The combination of both will provide an additional 100 million gallons for our system. The section of the aqueduct from portal No. 4 to its termination in Budlong Road, Cranston, a distance of 27,200 feet, will be 102 inches in diameter. There will be two 42-inch connections off the 102-inch aqueduct. One will reinforce areas supplied by the Kent County Water Authority and the City of Warwick system and the other will furnish water to the western areas of the City of Cranston and the Town of Johnston. There will be a 24-inch connection in the vicinity of Wilbur Avenue that will reinforce our own distribution system in the Oakland Avenue area of Cranston. Where the aqueduct ends at Budlong Road, Cranston, there will be a 42-inch connection for East Providence and a 24-inch for the Bristol County Water Company. When the work is completed, Providence will have transmission capacity of 200 million gallons daily which will be capable of meeting our estimated load demand of the maximum day to the year 2015.

The project is divided into eight contracts, four each for the 78-inch and the 102-inch sections. The first contract was for a portion of the 78-inch aqueduct and was awarded in March of 1966 and completed during the fiscal year. All remaining contracts on the 78-inch tunnel and aqueduct were under construction during the year and should be completed by the summer of 1968. Two contracts have been let for the 102-inch diameter aqueduct section and the remaining two contracts should be awarded in the early part of the next fiscal year. The entire project should be finished

Pointing of interior joints of the installed pipe aqueduct section.

Rock spoil in tunnel immediately following blasting operations.

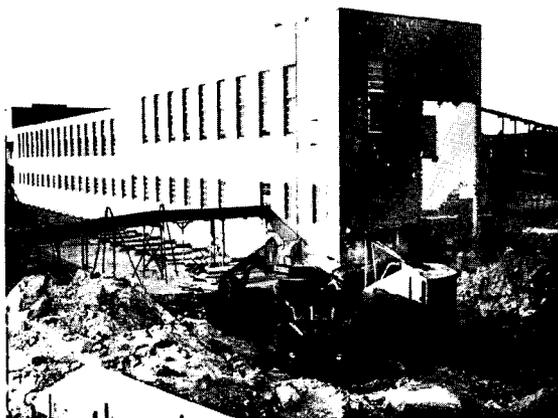

Forms in place ready to receive concrete lining in tunnel.

Contractor installing section of the 102" pre-stressed reinforced concrete steel cylinder pipe that has a capacity of 100 million gallons daily.

General excavation for filter plant extension that will increase capacity to 144 million gallons daily.

Construction operation that will extend the clear well to receive effluent from four additional filters.

and in operation by May of 1969.

The bids submitted on the first six contracts, including the cost of the 102-inch aqueduct under the P-37 Interchange, amounts to \$8,611,047. The cost of the two remaining contracts, plus the expense of land acquisition, engineering, field supervision and interest during construction is estimated to be \$4,600,000. The final project cost may run to \$13,200,000 or \$2,700,000 in excess of the estimate prepared in 1964.

ADDITIONS and IMPROVEMENTS at the WATER PURIFICATION WORKS

ADDITIONAL FILTERS—Providence has always provided ample storage throughout its distribution system in order to avoid excessive loads on the filtration plant. Under this arrangement, the plant is designed to meet the demands of the maximum day and the increased volume required for peak hourly loads is obtained from our distribution reservoirs.

The original plant in Scituate started operation in 1926 and consisted of ten rapid sand filters with a capacity of 44 million gallons daily. It has been necessary to expand the size of the filtration plant periodically so that ample production capacity would be available to meet customer's requirements. In 1939, four additional filters were added to the plant bringing the capacity up to 61.6 million gallons daily. As the load on the treatment plant continued to increase around 1950, it was necessary to construct additional filters or determine a method for producing greater volume from the existing fourteen filters. After a few years of research on a laboratory and plant scale basis, some of the filters were rebuilt in 1954. The effective size of the sand in the beds was increased and the rate of filtration was advanced to three gallons per square foot per minute. This change jumped the plant capacity

with all fourteen filters in service from 61.6 to 105 million gallons daily.

In 1964, our studies showed that the maximum daily demand was rapidly approaching the full plant capacity and work was started on the preparation of plans and specifications for the construction of four additional filter beds. Included in this program were provisions for replacing the sand in five existing filters that was not changed in 1954. The rate of filtration will be jumped to 3.25 gallons per square foot per minute so that the plant will be able to process 144 million gallons daily. This is the full potential that may be withdrawn from Scituate based on maximum daily demands.

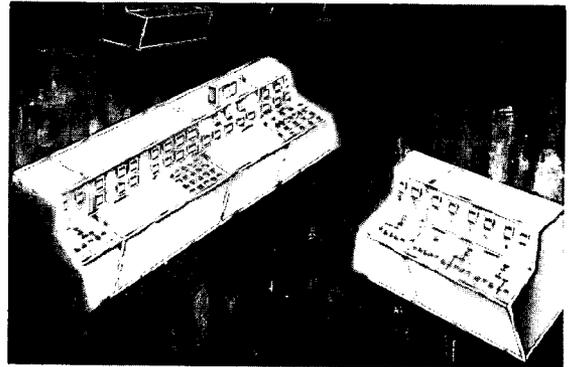

The contract was awarded on May 8, 1967 and the work is scheduled for completion in September, 1968 which is well ahead of the date that transmission lines will be completed by East Providence and the Bristol County Water Company.

CENTRALIZED CONTROL SYSTEM—A contract for the new centralized control system was awarded during the year. It will replace the present control board installed in 1939. The new system will monitor and control the performance of the filter plant, pumping stations, distribution reservoirs, flow measuring stations and other related functions such as the emergency diesel-driven generator located in the new Raw Water Booster Pumping Station. All pumping stations, including the Raw Water Booster Station at the base of Gainer Memorial Dam in the Town of Scituate as well as the three pumping stations in the distribution system, will be unattended and their operation will be regulated by a single operator stationed at the control board.

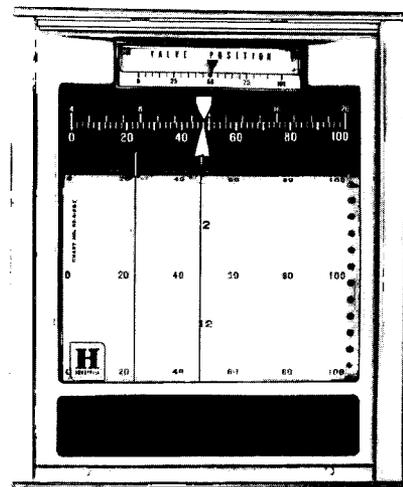

The board will consist of nine panels upon which will be mounted the instruments and controls for the eighteen filters.

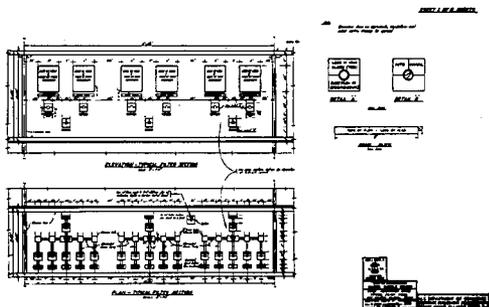

Ledge being removed from under 48" wash water main that must continue in service until lowered to connect with additional filters.

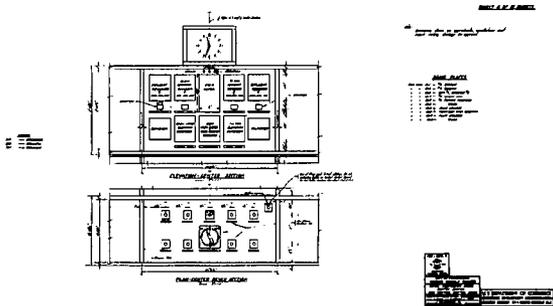

Artist's rendering of centralized control system that will monitor operation and control of filtration plant, pumping stations and distribution reservoirs.

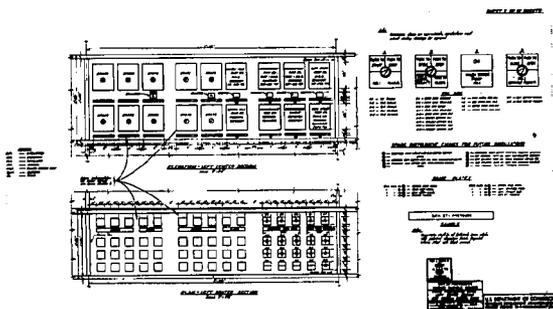

Dual pen instrument to record loss-of-head and rate-of-flow on each half filter.

Typical filter section showing recording instruments, control stations and mimic piping diagram.

Instrumentation on the incline vertical section along with miscellaneous controls on the bench board.

Miscellaneous controls and instrumentation for the remote operation of the pumping stations and reservoirs.

The inclined vertical section of the filter panels will have a single graphic recorder showing the loss-of-head and rate-of-flow for each half filter. There will be a modern dual pen miniature-type instrument with a thirty day continuous chart compared to separate loss-of-head and rate-of-flow circular instruments on the present board. Instead of the present time impulse transmitters, the new installation will have the continuous signal type with all transmitters located in the effluent pipe gallery. When the loss-of-head reaches a certain predetermined point, a relay will function closing the effluent valve and the filter will be removed from service. Directly below the miniature recorders will be an indicating light to show the filter requires backwashing. When both half filters reach this stage, there is a selector switch for either automatic or manual operation.

On the bench board section of each filter is an illuminated mimic piping arrangement that shows the normal flow when the water is being filtered and also the flow when the filter is being backwashed. There are pushbutton controls in the mimic piping diagram that allow manual operation whenever it is desired.

The three central panels will contain instrumentation and controls for the pumping stations, distribution reservoir elevations, flow measuring stations, emergency generator and other related functions.

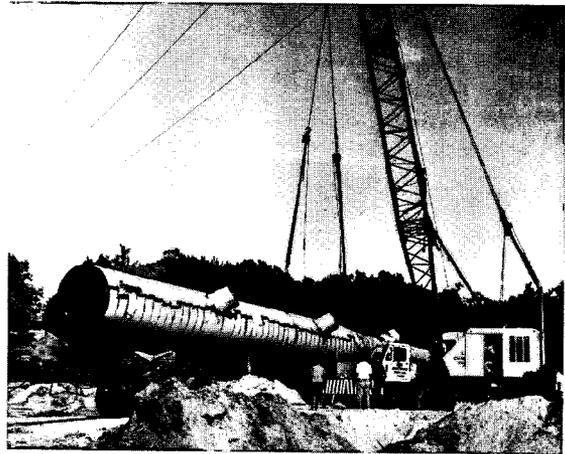

Space has been provided in these panels for the installation of additional instruments and controls for the eventual operation of a pumping station that must be built to obtain water from Wood River Reservoir and additional stations that will be required to serve the western sections of Cranston and Johnston.

The additions and improvements to the Water Purification Works were estimated to

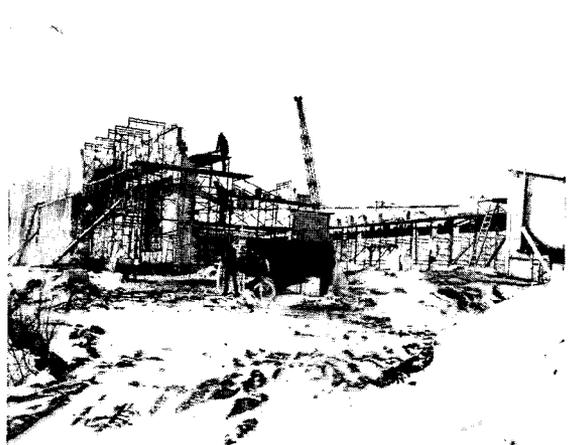

cost \$2,500,000 and present indications are that the cost of all contracts will not exceed \$1,800,000.

RAW WATER BOOSTER PUMPING STATION—The first contract on the new Raw Water Booster Pumping Station includes the pump, motors, switchgear, etc. and was awarded on April 25, 1966. Another contract for the building and site improvements was let the following month. This station will perform a dual role in transporting water from the reservoir intake structures to the Water Purification Works. The pumps will operate during periods of extended drought when the water in the reservoir recedes to a level that prevents gravity flow to the plant. It will also be necessary to use the pumps during the dry summer months when the reservoir elevation would drop to a point that would not be sufficient to provide the proper head characteristics to supply the plant with a sufficient quantity of water to meet the requirements of the maximum day.

As the station will be called upon to operate under a wide demand range, we selected two pumps rated at thirty million gallons daily and two larger pumps of fifty million-gallons daily capacity. This arrangement will provide eight different rate combinations varying from thirty million gallons for a single pump to 160 million gallons for all the pumps. Each pump will be driven by one of two synchronous motors mounted on a single shaft. The thirty million gallon pumps will be driven by either a 150 horsepower or 400 horsepower motor, the fifty million gallon pumps by a 300 horsepower or 600 horsepower motor. The low horsepower motors on each pump will operate when the reservoir elevation does not drop more than 26 feet. The large horsepower motors will be placed into service for reservoir elevations that drop to 60 feet below the spillway.

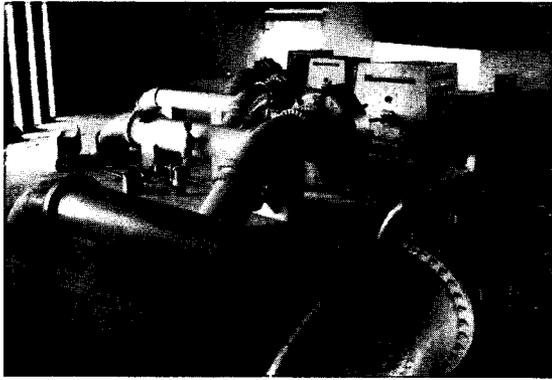

109 ft. section of 72" diameter steel pipe suction header section showing connections for individual pumps.

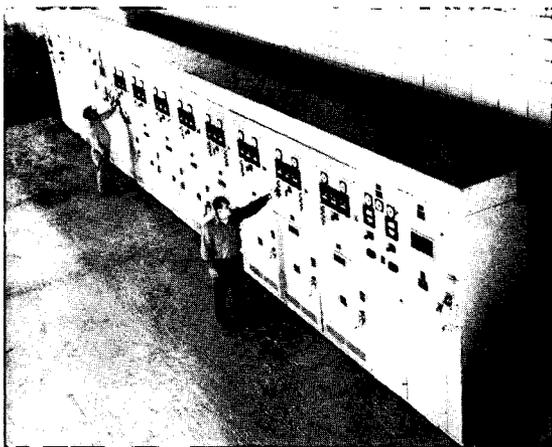

Raw Water Booster Pumping Station under construction that will contain two 50 and two 30 million gallons daily pumps along with a 2300 horsepower diesel driven generator.

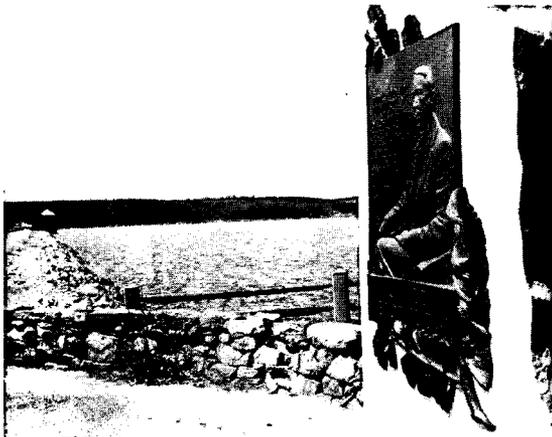

Manifold suction connection to the existing twin 60" steel pipe aqueducts showing the motor-operated valves that will be controlled from the centralized system at the Purification Works.

50 and 30 million gallons daily pumps with dual synchronous motor drives.

High voltage switchgear for eight pump motors ranging from 150 to 600 horsepower remotely controlled from the Purification Works.

View of main dam named after Joseph H. Gainer, Mayor of Providence from 1913 to 1927.

The switchgear for the pump motors and valve operators will be remotely controlled over our own signal lines that run underground from the station to the Water Purification Works. The 2300 horsepower emergency diesel-driven generator that will furnish power in case of failure to the local power system will be similarly operated. There are 53 command and reportback signals for general start and stop operations, indication of generator fault, overheating of motor windings and bearings and the changeover from public power to our own.

The station should be ready for acceptance tests in the early part of the next fiscal year. Although the cost was estimated to be \$1,500,000, it appears that the final cost will not exceed \$1,200,000.

SOURCE OF SUPPLY

Providence was fortunate in having a dynamic and farsighted administration back in 1915 that succeeded in having legislation passed establishing a Water Supply Board with authority to build our present supply on the north branch of the Pawtuxet River. Water is impounded in Scituate Reservoir from a drainage basin that contains 92.8 square miles and the City owns in fee 23.93 square miles or about 25% of the catchment area. The major portion of the watershed is located within three towns that are sparsely populated with only 80 persons per square mile. There are practically no industries operating on the watershed. It has been highly productive over the years with a daily yield for the past 52 years of 107.87 million gallons compared to an estimated safe yield of 84 million gallons.

FIVE-YEAR DROUGHT—Since the start of the supply in 1926, we have experienced several periods of drought but they have been of relatively short duration with rapid recovery in our impounding reservoirs. For five consecutive years, from October 1, 1961 to September 30, 1966, the eyes of the public were focused on a serious drought that prevailed throughout the northeastern section of the country. During this period, many communities were compelled to curtail the use of water which was due to the failure of some public officials to plan for adequate water supplies.

The accumulated deficiency in rainfall on the Scituate watershed during the drought amounted to 32.07 inches and the deficiency in runoff, the amount of precipitation collected, was 38.42 inches. This latter figure represented a loss in production on the drainage basin of about 62 billion gallons. The lowest water level during the five-year drought occurred on February 11, 1966 when Scituate Reservoir reached 266.28 or 17.73 feet below the spillway. In June of that year, all five small reservoirs were drained into the main body to reduce evaporative losses and increase the elevation in Scituate Reservoir. The lowest yield ever recorded on the Scituate basin took place that year with a daily yield of only 47.84 million gallons compared to the long-term average of 107.56 million gallons. Our total storage on February 11, 1966 was 24,193 million gallons equivalent to 58.66% of capacity, representing a reserve supply of 372 days based on the requirements of the basic draft.

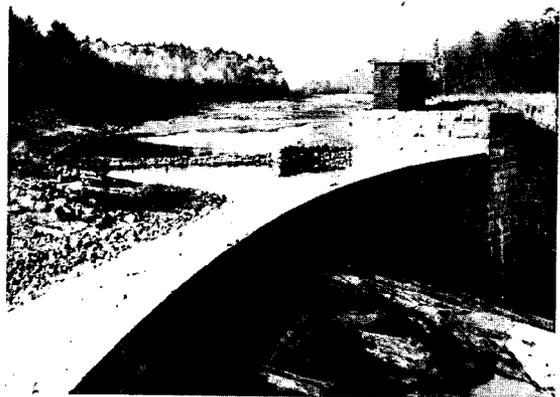

Recovery from the drought was rapid during the past year. Rainfall on the watershed amounted to 56.41 inches which was considerably in excess of the 52-year average of 48.09 inches. Runoff was 27.44 inches against an average of 24.43 inches. This runoff produced 44,277.11 million gallons equal to 121.31 million gallons daily compared to an average of

Receding shoreline of main Scituate Reservoir as a result of the extended drought.

Severe loss in storage in main reservoir resulting from the five-year dry spell.

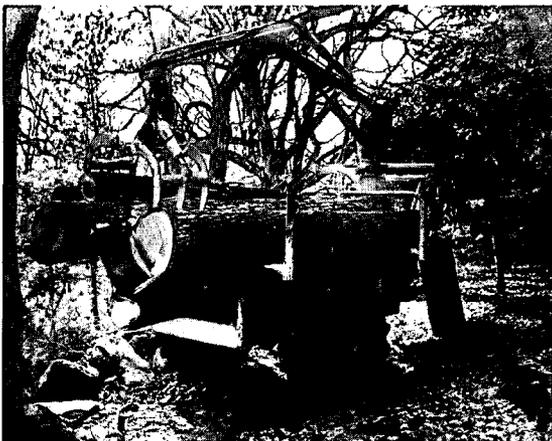

Barden Reservoir, one of the five small reservoirs that were drained to reduce evaporative losses and concentrate the storage in the main reservoir.

Rapid recovery of main reservoir occurred in 1967 resulting in large quantities of water discharging over the spillway.

Barden Reservoir recovered full storage in 1967 with excess storage discharging over the spillway.

Modern logging equipment harvests logs from mature stands of timber on the watershed forests.

107.87 million gallons. The water level in Scituate Reservoir reached elevation 285.85 on May 27, 1967 which was 1.84 feet above the spillway and 0.18 feet above the two rows of 8-inch flashboards. Recovery in the five small reservoirs started when the gates were closed around the first of April. Storage in all reservoirs on May 27, 1967 was 42,945 million gallons, equal to 105% of capacity with sufficient reserve storage of 613 days.

For the first time in 3 years, regulatory control returned to normal with surplus water available to operate the water wheel at rates that would produce excess power that was sold to the Narragansett Electric Company.

FORESTRY OPERATIONS—The City of Providence owns more land on the watershed of our Scituate supply than the entire area of the City. The property has been under the management of professional foresters for over 20 years. The importance of proper management of the forest cover is plainly demonstrated in the improved quality of the raw water impounded in our storage reservoirs. Forest soils provide favorable conditions for increased infiltration and absorption of precipitation thereby preventing rapid runoff and subsequent erosion and silting. The porous, organic soil of the forest filters the water as it moves to lower soil levels and into the streams and reservoirs on the watershed.

Almost 7,000,000 coniferous transplants and seedlings have been planted on arable areas, reservoir margins and upland sites. The management of these plantations and existing forestland has required an intensive maintenance program for many years. Timber culture opera-

tions such as thinning of crowded plantations, the release of suppressed conifers from low-quality trees and brush and the preparation of sites for reforestation are carried out annually.

Timber removed in thinnings, improvement operations and the harvest of matured stands is selectively marked by foresters who must consider important factors as far as site, timber quality, terrain, market conditions and aesthetics. During the fiscal year, nearly 1,000,000 board feet of timber products consisting of sawlogs, pulpwood and cordwood were removed from the watershed forests. Stumpage is contractually sold to woods operators who are carefully supervised by the foresters in the field.

Protection of the forest resources is most essential in the proper operation of the watershed. Forest roads and fire lanes are developed and maintained to insure quick access if required for forest fire suppression. The City's 100 ft. fire tower on Tunk Hill is regularly manned to provide fast detection of fires on high-hazard days.

The forestry staff is continually on the alert for forest insect and disease infestations that may reach serious epidemic proportions. Problem areas are quickly identified and frequently brought under the scrutiny of research and field personnel of the U. S. Forest Service. An example of such a cooperative venture is a coordinated program with research teams of the Forest Service in the study of destructive root and butt disease of conifers caused by *Fomes Annosus*. Infra-red aerial photographs of diseased plantations have been taken and analyzed. While new control techniques are being tested, problems encountered with treatment materials now used in the control of the disease are under close surveillance.

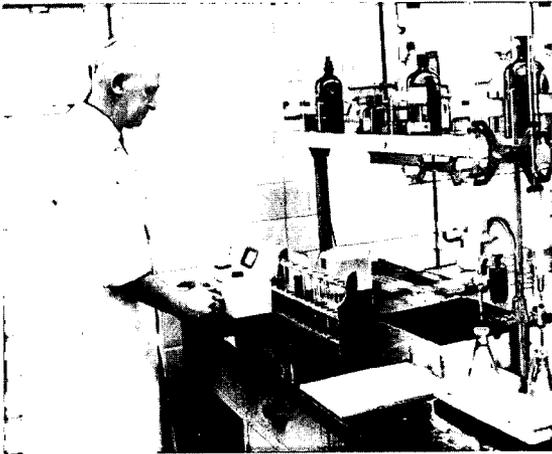

Pulpwood is removed in thinning and improvement operations in the management of the forest.

Forest-access roads are developed and maintained to provide accessibility for fire protection and future management operations.

Experienced woods operators harvest selectively marked trees in the cultural development of forest stands. Immediate treatment of stumps after cutting prevents spread of damaging root disease.

Chemists conduct numerous tests in the department's laboratories checking the characteristics of the water throughout the entire treatment process.

Laboratory technicians conduct student tours explaining the various processes employed in the treatment of our water supply.

Bacteriologist making frequent examinations to safeguard the quality of the water being delivered into the distribution system.

Turf management at the dams, distribution reservoirs and Purification Works were carried out during the year. Herbicidal spray treatment was applied to 29 miles of access roads and fire lanes. Thirteen miles of roadside fence-line and a substantial shoreline area was sprayed to eliminate hardwood sprout growth. Over 3,000 feet of forest access roads were graded and topped with gravel and 6,600 feet were cleared and improved. Five thousand hemlock, larch and white pine seedlings were planted on 9.4 acres of watershed property.

LABORATORIES—The chemical and bacteriological laboratories that check the quality of the water supply from the raw water impoundments to the tap at the consumer's premises conducted tests on 12,664 samples of water during the year. They were obtained from brooks, streams and raw water reservoirs as well as samples collected daily throughout the distribution system. Tests made on these samples included chemical, sanitary chemical and mineral analyses, and bacteriological and microscopical examinations. The total number of tests made during the year amounted to 102,572. Based on a 40-hour week, the water was receiving one test or another every 73 seconds.

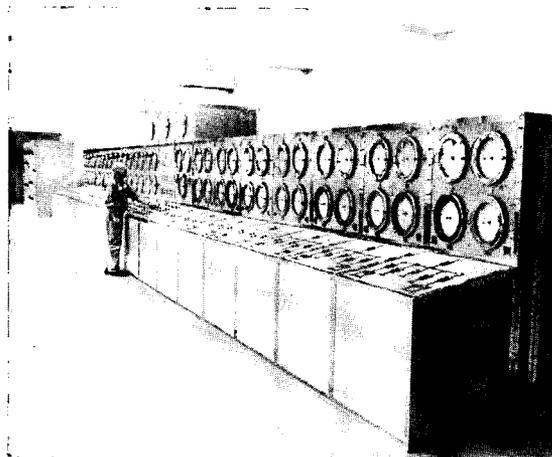

Chemists carried out frequent coagulation tests of the raw water with various amounts of chemicals, simulating all operations of the purification processes for the purpose of determining the most desirable dosage to produce an excellent quality of water at a reasonable cost. Rigid laboratory control over the quality of the water exceeded the sampling requirements of the U. S. Public Health Service Drinking Water Standards. The actual number of bacteriological samples collected from our distribution system amounted to 3,134 or an average of 261 per month, a figure 37% greater than recommended by the Standards and about equal to the number required for a population of 600,000.

PURIFICATION—The water supplied to communities from the Providence system is processed at one of the most modern filtration plants in the country. In 1939 the usual hydraulic operation of the equipment with manually-controlled tables spread all over the plant were replaced with all-electric operation from a central control board. There is no danger from loss of power to this all electrically operated plant as we have three sources of power.

All chemical feeding machines are automatically controlled in direct proportion to the volume of water being treated. They are installed in multiple units with standby machines that may be placed in service in case of mechanical failure. Chemicals are stored in large silos and materials are transferred pneumatically to hoppers over each chemical feed machine by remote control.

The treatment process consists of influent aeration, mixing, coagulation and sedimentation and, finally, filtration. Chemicals employed include ferric sulphate to coagulate microorganisms and particles that cause color and turbidity; lime to change the water from acid to alkaline, that reduces corrosion in the distribution system and assists in the precipitation of iron and manganese; and chlorine to destroy harmful bacteria. Finally, fluoride is added to reduce dental caries in children.

During the year, 17,562.53 million gallons were delivered into the distribution system equal to 48.12 million gallons daily. Peak loads for this period did not reach the record established in 1965. At that time the plant was called on to produce water at the rate of 102.44 million gallons a day for several hours and the maximum hourly demand in the system was at the rate of 134.06 million gallons daily. The difference in plant production and system demands was provided from storage reservoirs in our distribution system.

Original Central Control Board installed in 1939 for all-electric plant operation; to be replaced with new Centralized Control System.

Introduction of chemicals into the treatment process is automatically controlled by modern chemical feeding machinery.

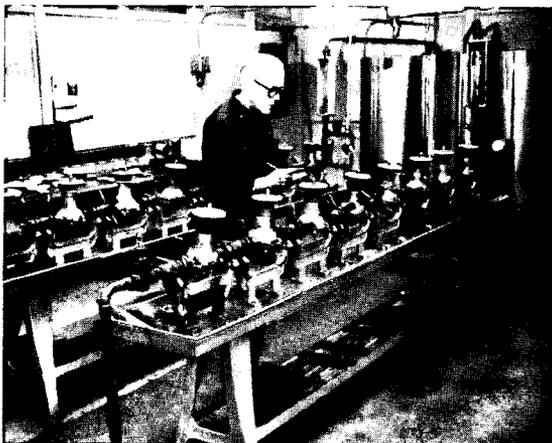

Filter gallery with electrically operated valves remotely controlled from Central Control Board.

Distribution main being extended into residential development by private contractor engaged by the department through competitive bidding.

Maintenance crew conducting annual valve inspection program with utility truck equipped with power-driven valve operator.

Double bank of meters being tested for accuracy in shop after mechanics complete repairs.

DISTRIBUTION

At the time water was first introduced into our distribution mains on Thanksgiving Day, November 30, 1871, the system contained 121,336 ft. (22.98 miles) of water mains ranging from 6" to 36" in diameter. Today we have a network of 4,241,013 ft. (803.22 miles) in the four communities supplied from our own distribution pipes in sizes from 6" to 66" in diameter. The distribution grid contains cast iron, steel, asbestos-cement and reinforced concrete steel cylinder pipe. There are 63,819 services, 15,707 valves and 4,858 hydrants installed.

During the year, we laid 54,677 feet of mains in sizes from 6" to 16" in diameter and installed 832 services, 193 valves and 198 hydrants. Maintenance crews carried out the annual inspection of all hydrants and valves throughout the distribution system.

The network consists of two sections, the so-called low service area that is a gravity supply and the high service system that furnishes water to higher elevations as well as the special fire service in the downtown business district of Providence. These areas are supplied from three pumping stations located in different parts of the system. Total water distribution was 17,561.32 million gallons or 48.11 million gallons per day. The low service area consumed the greater portion, 81.8%, and the high service 18.2%. Total registration on customers' meters was 16,747.48 million gallons which accounts for 95.4% of the water delivered into the system.

Leaks in the transmission and distribution mains totalled 62 throughout the year, 29 occurring at joints and 33 as a result of ruptured mains. Leaks at joints averaged one for every 28 miles of pipe and total leaks averaged one for every 13 miles of main.

Meters in our system are owned by the customer and total 63,931. After meters have been in service from 35 to 40 years and repairs to the meter become excessive, the property owner is compelled to purchase a replacement meter. Small size meters in residential properties are brought into our repair shop every seven years for test and repairs and larger meters more frequently. During the year, 8,337 meters were repaired in the shop and 159 in the field.

ENGINEERING OFFICE

The engineering staff played a major role in supervising all construction work and various technical operations throughout the department as well as planning and designing numerous capital improvements. Some of our projects are carried out as a joint venture with our own personnel preparing the plans and specifications for the engineering aspects of the work and outside architectural consultants are retained to prepare plans and specifications for their portion, both phases being combined in a single set of contract documents.

Our design engineers and draftsmen prepared plans and specifications for the construction of additional filters and a new central control system at the Water Purification Works, main extensions into numerous real estate developments along with the preparation of specifications covering the purchase of materials and equipment for the department. Other services included computations of quantities and the preparation of monthly estimates for periodic payments on all outstanding contracts.

During the year, our engineers supervised the construction of the Supplemental Tunnel and Aqueduct, the Raw Water Booster Pumping Station and the Additions, Alterations and Improvements to the Water Purification Works. The program consisted of twelve separate contracts and represents a capital investment of

Engineers and draftsmen engaged in preparation of plans and specifications and the maintenance of all records relating to plant operations and distribution system.

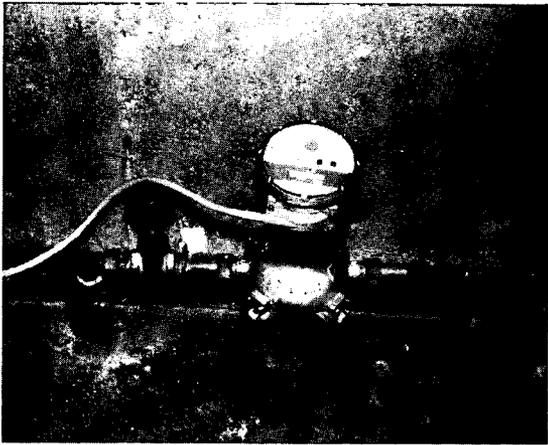

Project engineer inspecting 102-inch prestressed reinforced concrete pipe prior to installation.

Department's field engineers checking alignment and proper bedding of pipe prior to backfilling operations.

Business office responsible for customer accounts, payrolls and job cost system.

Encoder register placed on existing meter to transmit readings to outside house receptacle.

Meter reader inserts jack attached to visual recorder into outside receptacle in order to obtain remote reading on customer's meter.

over \$16,000,000.

COMMERCIAL AND ACCOUNTING

During the year, the department added 832 new accounts to its books bringing the total to 62,318. To meet the varying requirements of our customers, incoming telephone calls were received 24 hours daily. The usual operations were carried out such as the preparation of water bills, the collection of delinquent accounts, notifying customers of excessive water consumption, investigating complaints, processing new applications, preparing payrolls and job cost data.

For many years the department has been concerned with the growing problems faced by this division in obtaining data for the preparation of customer's bills. A recent survey showed that out of a total of 118,556 calls made by our meter readers for billing and intermediate readings, we were unable to gain access to the meter on 22,847 occasions. On the call-back, we managed to read 14,096 meters but there remained 8,751 accounts that would require an estimated bill unless the customer phoned or mailed in the reading. During the year, the department studied and reviewed the literature on remote reading systems and finally adopted the ARB system manufactured by the Neptune Meter Company. With the receptacle located on the outside of the house or building, the meter readers will be able to more than double the number of readings obtained daily. At the start, we will use the visual reader as an interim step but will eventually employ a magnetic tape recorder that will be forwarded to the data processing center for the preparation of the bills. The ARB method will insure accuracy and eliminate human errors that are bound to take place under our present arrangement.

FINANCIAL

The Providence Water Works is a self-supporting utility that operates entirely from revenue received from the sale of water and other miscellaneous department charges. Although the costs of labor and material have risen sharply over the years, there has been only one rate increase since 1923. This occurred 10 years ago, in 1957, and we have made no changes in the rate structure since that date. Gross revenue for the year amounted to \$3,402,948.17, a drop of 3.4% or \$119,437.93 below the previous year. This loss in income resulted from reduced water consumption due to an exceptionally wet summer compared to the last five years of drought plus considerable emphasis placed on the dry spell by the press and the desirability of curtailing the use of water. Current water sales which account for 89% of all water income was \$3,033,036.68, a drop of \$116,040.85 below the 1966 year. Operating expense moved up 6.8% to \$2,359,882.39, an increase of \$150,836.58.

Principal payments on the serial bonds and the floating debt was \$134,350. Interest on the bonded and floating debt was \$157,934.63. The department placed \$350,000 in the Water Depreciation and Extension Fund. This left a surplus of \$400,781.15, which under the law reverts to the Sinking Fund to retire water bonds.

The bonded debt as of September 30, 1967 was \$4,380,000 that includes one remaining issue of \$1,500,000 for the development of our present Scituate supply and \$2,880,000 issued in 1962 for the construction of Aqueduct Reservoir and improvements to the Water Purification Works. The \$1,500,000 bond issue will be retired in January, 1968 and the Sinking Fund to retire this issue contains \$3,309,279.10, a surplus of \$1,809,279.10.

PRESENT AND FUTURE CAPITAL PLANNING

Our present capital improvement program was originally estimated to cost \$14,500,000. Included in the program was a Supplemental Tunnel and Aqueduct from the Water Purification Works in Scituate to the Budlong Road area of Cranston, as well as the Alterations and Improvements to the Water Purification Works. These two projects were to be financed by a \$13,000,000 bond issue which had been approved by the voters. The Raw Water Booster Pumping Station would be financed by a transfer of \$1,500,000 from the Water Depreciation and Extension Fund. Contracts already awarded indicate the cost will be in excess of the early estimates. Mayor Joseph A. Doorley, Jr. succeeded in obtaining a 50% Federal grant from the U. S. Commerce Department,

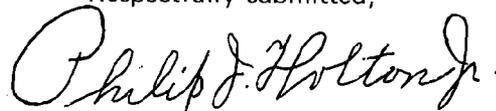

Economic Development Administration, of \$7,250,000. As a result of the Mayor's efforts, the cost of debt service on this program will be reduced by about \$450,000 annually.

For years, the department has recommended the development of Big River Reservoir located on the south branch of the Pawtuxet and the Wood River Reservoir on the Pawcatuck Basin as a supplementary source of water for the Providence system. Our long-range studies show that the demand on our system will reach the estimated safe yield of our present Scituate supply by the year 1983. As it will require four to five years to complete the field work and to prepare the construction plans for these new facilities, plus six to seven years to build them, it is urgent that work proceed at once. The Mayor and the City Council approved an appropriation that will enable the department to prepare preliminary plans in order to file an application with the newly created State Water Resources Board that will permit Providence to construct the reservoirs, purification works, pumping stations and other appurtenant work. Two years ago, the estimated cost of the project was \$48,000,000.

If our application is approved by the State agency, the department will endeavor to obtain a Federal loan to assist in financing the cost of the field work as well as the preparation of the construction plans.

Statistical data for the year ended September 30, 1967 is appended to the report.

Respectfully submitted,

Philip J. Holton, Jr.
Chief Engineer

Average	728.1													

Raw water treated with Ferri-Floc before Influent Aeration.

Quicklime added to Ferri-Floc treated water in conduit to tangential mixer.

Chlorine added to water after filtration from Oct. 1, 1966 to Jan. 22, 1967 and before filtration from Jan. 23 to Sept. 30, 1967.

Sodium Silicofluoride added to water after filtration.

Raw water drawn from lower intake at Gainer Memorial Dam all year.

HASTINGS, MINN., LOGAN, OHIO U.S.A.

THE CITY OF PROVIDENCE
STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS

CHAPTER

68 - 12

No. 99 AN ORDINANCE APPROVING AND ADOPTING THE OFFICIAL REDEVELOPMENT
PLAN FOR MOUNT HOPE PROJECT NO. R.I. R-18

Approved March 13, 1968

Be it ordained by the City of Providence:

WHEREAS, the Providence Redevelopment Agency (hereafter sometimes called "Local Public Agency") pursuant to the provisions of Title 45, Chapters 31-33 (inclusive) of the General Laws of Rhode Island, 1956, as amended, entitled "Redevelopment act of 1956", has formulated and submitted to the City Council on December 21, 1967 for its consideration, a Redevelopment Plan approved by the Local Public Agency, for a project area which said redevelopment plan is entitled, "Redevelopment Plan for Mount Hope Project No. R.I. R-18" and comprises a report consisting of 34 pages of text, ⁸ 7 maps and 2 exhibits; and 2.6.1
2-7-68

WHEREAS, a general plan has been prepared by the City Plan Commission and is recognized and used as a guide for the general development of the City of Providence as a whole; and

WHEREAS, the said redevelopment plan concerns itself with areas which has been designated Redevelopment Areas by the City Council of the City of Providence by Chapter 103 of the Ordinances of the City of Providence, approved July 6, 1948, as amended by Chapter 1159 of the Ordinances of the City of Providence, approved November 22, 1957, and as amended by Chapter 1798 of the Ordinances of the City of Providence approved November 7, 1966, in conformity with the provisions of Section 22 of Chapter 1802 of the Public Laws of Rhode Island 1946, as amended, and Title 45, Chapter 32, Section 4 of the General Laws of Rhode Island, 1956, as amended; and

WHEREAS, a copy of said Redevelopment Plan was transmitted to the City Plan Commission on January 9, 1968; and

WHEREAS, the City Plan Commission, which is the duly designated and acting official planning body for the City, has submitted to the City Council its report and recommendations respecting the Redevelopment Plan for the Project Area and has certified that said Redevelopment Plan conforms to the said general plan for the City as a whole, and the City Council has duly considered said report, recommendation and certification of the planning body; and

WHEREAS, the Plan indicates that an inspection of the dwelling units in the area by trained housing inspectors, using the "Appraisal Method for Measuring the Quality of Housing" developed by the American Public Health Association and recommended for use by the United States Public Health Service and supplemented by the Providence Building Code for all residential buildings, and an evaluation of non-residential structures performed by the inspectors of the Providence Building Inspection Department indicate that the area is a deteriorated blighted area under the provisions of Title 45, Chapter 13, Section 8 (4).

WHEREAS, the plan indicates that a survey, based upon a detailed inspection of 478 of the 509 structures within the said project area was made.

(1) Of the 458 residential structures within the area, 429 or 93.3% were inspected. These inspections revealed the following: basic dwelling deficiencies: 273 or 29% of the 955 dwelling units inspected were found to have at least one basic deficiency in essential dwelling facilities; 154 or 30% of the 509 total buildings were determined to be either deficient or substandard. Basic deficiencies include serious deterioration, serious overcrowding, lack of dual egress, lack of sanitary facilities and serious inadequacies in lighting and ventilation. A basic deficiency indicates a serious violation of minimum standards for continued dwelling occupancy and building safety which ordinarily would justify removing occupants from the dwelling until the violation was corrected.

(2) Surveying the non-residential structures were investigators who were inspectors of the Providence Department of Building Inspection. The standard of evaluation employed was the Providence Building Code.

Of the 49 non-residential structures surveyed, only 17 or 35% were found to be standard; 14 or 28% were found to be deficient; 18 or 35% were found to be substandard.

Of the total number of the project's structures, 509, 154 or 30% were found to be substandard, seriously deficient or unsafe.

WHEREAS, the plan as submitted contains a finding that the area included in the proposed redevelopment plan qualified as a deteriorated area under the provisions of Title I of the United States Housing Act of 1949, as amended, (hereafter sometimes called "Housing Act:") and as a deteriorated blighted area within the meaning of the "Redevelopment Act of 1956" as amended to date, because there exist in the area buildings or improvements, used or intended to be used for living, commercial, industrial or other purposes, which by reason of (1) dilapidation, deterioration, age or obsolescence, (2) inadequate provision for ventilation, light, sanitation, open spaces and recreation facilities, (3) defective design or insanitary or unsafe character or condition or physical construction, (4) defective or

inadequate street and lot layout, (5) mixed character, deterioration or shifting of uses to which they are put, or any combination of such factors and characteristics are conducive to the further deterioration and decline of the area and to injuriously effect the entire area. The project area is not restricted, nor does it consist entirely of, lands, buildings, or improvements which of themselves are detrimental but is an area in which such conditions exist, and injuriously affect the entire area.

WHEREAS, the Providence Redevelopment Agency has prepared a plan for the relocation of families that may be displaced as a result of carrying out the Project in accordance with said Redevelopment Plan and has submitted to the City Council a Relocation Plan for the Project, identified as "Relocation Plan for the Mount Hope Project No. R.I. R-18"; and

WHEREAS, there have also been presented to the City Council information and data respecting the Relocation Plan which have been prepared by the Providence Redevelopment Agency as a result of studies, surveys and inspections in the Project Area and the assembling and analysis of the data and information obtained from such studies, surveys, and inspections; and

WHEREAS, the members of this Body have general knowledge of the conditions prevailing in the Project area and the availability of proper housing in the locality for the relocation of families that may be displaced from the Project area and, in the light of such knowledge of local housing conditions, have carefully considered and reviewed such Relocation Plan; and

WHEREAS, under the provisions of Title I of the Housing Act of 1949, as amended, the United States Department of Housing and Urban Development is authorized to provide financial assistance to local public agencies for undertaking and carrying out of urban renewal projects; and

WHEREAS, the Providence Redevelopment Agency has applied for financial assistance under said Housing Act and has entered into a planning contract for financial assistance under said act with the United States of America, acting by and through the Secretary of the Department of Housing and Urban Development pursuant to which act Federal funds have been provided for the project; and

WHEREAS, the Providence Redevelopment Agency has applied for additional financial assistance under the Housing Act and proposes to enter into an additional contract or contracts with the Department of Housing and Urban Development for the undertaking of, and for making available additional financial assistance for the Project; and

WHEREAS, it is provided in said Act that contracts for financial aid under the Housing Act shall require that the redevelopment plan for the project area be approved by the governing body of the locality in which the project is situated and that such approval include findings by the governing body that (1) the financial aid to be provided in the contract is necessary to enable the land within the project area to be redeveloped in accordance with the redevelopment plan; (2) the redevelopment plans for the redevelopment areas in the locality as a whole, for the redevelopment of such areas by private enterprise; and (3) the redevelopment plan conforms to a general plan for the development of the locality as a whole; and

WHEREAS, there has also been presented to the City Council information and data respecting redevelopment plans for the redevelopment areas in the City of Providence including the following: Capital Improvement Programs for 1950-1956, 1951-1957, 1952-1958, 1953-1959, 1954-1960, 1955-1961, 1956-1962, 1957, 1963, 1958-1964, 1959-1965, 1960-1966 and 1961-1967, 1962-1968, 1963-1969, 1964-1970, 1965-1971 and the Annual Reports of the Providence Redevelopment Agency for 1948 through 1966 (inclusive); and

WHEREAS, at a public hearing held on January 24, 1968 following notice of the date, time, place and purpose of such hearing, the City Council Committee on Urban Redevelopment, Renewal and Planning duly considered the Redevelopment Plan, and all evidence and testimony for and against the adoption of such Plan in accordance with the provisions of the "Redevelopment act of 1956"; and

WHEREAS, said Redevelopment Plan for the Project Area prescribes certain land uses for the Project Area, and will require, among other things, but not by way of limitation, the widening, vacation and removal of streets, the construction and installation of streets, curbs and sidewalks grading and other public facilities and other public actions; and

WHEREAS, it is necessary that the City Council take appropriate official action respecting the Relocation Plan and said Redevelopment Plan for the Project, in conformity with the requirements of the "Redevelopment act of 1956" and the contract or contracts for financial assistance between the Providence Redevelopment Agency and the U.S.A. acting by and through the Secretary of Housing and Urban Development;

NOW, THEREFORE, be it ORDAINED by the CITY OF PROVIDENCE:

1. The project is hereby designated as "Mount Hope Project No. R.I. R-18".

2. It is hereby found and determined that for the purposes of the Redevelopment Plan the Mount Hope Project No. R.I. R-18 comprises that certain tract of land situated in the City of Providence and State of Rhode Island, which is bounded and described on Exhibit A, which is attached hereto and made a part hereof as if more fully set forth herein.

3. It be and hereby is found and determined in relation to the Mount Hope Project No. R.I. R-18 on the basis of the facts set forth in the reports and documents mentioned in the Preamble of this Ordinance and upon the basis of evidence and testimony presented at the public hearing on said plan:

(a) That within the Mount Hope Project No. R.I. R-18:

(1) 30% of the structures are substandard or seriously deficient or unsafe in that these structures contain serious deterioration, lack of dual egress, lack of sanitary facilities, serious inadequacies in lighting and ventilation, serious overcrowding.

(b) That within the Mount Hope Project No. R.I. R-18:

(2) There exists the following environmental deficiencies:

- a. Defective or Inadequate Street and/or Lot Layout.
- b. Incompatible or Shifting Uses.
- c. Obsolete or Aged Buildings, Not Suitable for Improvement or Conversion.
- d. Inadequate Provision for Ventilation, Light, Sanitation, Open Space and Recreation Facilities.
- e. Defective Design or Insanitary or Unsafe Character or Condition of Physical Construction.

4. It be and hereby is found and determined that because of predominance of conditions of dilapidation, deterioration, obsolescence, inadequate provision for light and sanitation, unsanitary and unsafe character and condition of physical construction, mixed character of uses which injuriously affect the entire area and constitute a menace to the public health, safety and welfare of the inhabitants of the area and of the community generally, said Project Area is a deteriorated and blighted area within the meaning of Section 2-8 inclusive of Chapter 31 of the "Redevelopment act of 1956" as amended, and that said Mount Hope Project No. R.I. R-18 is hereby determined to be a deteriorated blighted area.

5. It be and hereby is found that the Mount Hope Project No. R.I. R-18 requires clearance, replanning, redevelopment, and improvement and rehabilitation under the provisions of the "Redevelopment act of 1956".

6. It be and hereby is declared to be the purpose and intent of this body to eliminate the deteriorated and substandard conditions existing in the Mount Hope Project No. R.I. R-18, and the replacement of such conditions by a well-planned area in accordance with and by the means provided in the "Redevelopment act of 1956".

7. It is hereby found, declared and determined that:

(a) The Redevelopment Plan for Mount Hope Project No. R.I. R-18 will redevelop said Project Area in conformity with the provisions of the "Redevelopment act of 1956"; will effectuate the purposes and policy of said Act; and will promote the public health, safety, morals and welfare of the City of Providence.

(b) The Redevelopment Plan for said Project Area conforms to the general or master plan for the City of Providence as a whole.

(c) The Redevelopment Plan for said Project Area is feasible and the financial aid provided pursuant to the contract or contracts for financial assistance pertaining to the Project between the Providence Redevelopment Agency and the Secretary of the Department of Housing and Urban Development under provisions of Title I of the United States Housing Act of 1949, as amended, is necessary to enable the land in the Project Area to be redeveloped in accordance with the Redevelopment Plan for the Project Area.

(d) The acquisition of the real property in accordance with the said Plan for the Mount Hope Project No. R.I. R-18 is in the public interest.

(e) Adequate provision for payment for property which may be acquired by the exercise of eminent domain has been made in the Redevelopment Plan.

(f) The Redevelopment Plan contains adequate safeguards to assure the carrying out of the work of redevelopment in accordance with the Redevelopment Plan.

(g) The Redevelopment Plan provides for the retention of controls and the establishment of restrictions and covenants which may run with the land.

(h) The Redevelopment Plan will afford maximum opportunity, consistent with the sound needs of the City as a whole, for the redevelopment of other areas of the City by private enterprise.

8. The Providence Redevelopment Agency shall sell, lease or dispose of land in the project area only in accordance with the terms of the redevelopment plan and subject to the restrictions, covenants and conditions set forth therein and which are hereby found and declared to be necessary to effectuate the purposes of the "Redevelopment act of 1956".

9. In enacting this Ordinance, the City Council intends to comply with the provisions of the "Redevelopment act of 1956" which relate to adoption of a redevelopment plan for an approved project area so that the blighted and substandard conditions in this Project Area can be eliminated and the Project Area can be redeveloped in accordance with the Redevelopment Plan to attain the public purposes

and policy of the "Redevelopment act of 1956" and thereby to protect and promote and be in the interest of the public health, safety, morals and general welfare of the people in the State as a whole and particularly the people of this City.

10. The Redevelopment Plan for the Mount Hope Project No. R.I. R-18 which is attached hereto consists of a booklet containing a table of contents, 34 pages of text, 2 exhibits and 7 maps is hereby approved, adopted and designated as the Official Redevelopment Plan for Mount Hope Project No. R.I. R-18 and is herein incorporated by reference, made a part hereof and designated as "Exhibit B".

11. The Providence Redevelopment Agency is hereby fully authorized to carry out this Official Redevelopment Plan. Provided, however, that the Agency shall not enter into any contracts for disposition of property in the project area until at least ten days after the City Council of the City of Providence has received at a regular or special meeting a report from the Providence Redevelopment Agency concerning the proposed sale or lease.

12. In order to implement and facilitate the effectuation of the redevelopment plan hereby approved it is found and determined that certain official action must be taken by this body with reference to, among others, the vacation and removal of street, the relocation of sewer and water mains and other public facilities and, accordingly, this body hereby:

(a) Pledges its cooperation in helping to carry out said Official Redevelopment Plan;

(b) Requests the various officials, departments, boards and agencies of the City of Providence having administrative responsibilities in the premises likewise to cooperate to such end and to exercise their respective functions and powers in a manner consistent with said Redevelopment Plan;

(c) Declares that it will institute proceedings for the opening, closing, widening or changing the grade of streets and other modifications of the street layout as set forth in the Official Redevelopment Plan;

(d) Declares that it will provide the City's share of the Net Project Cost of the redevelopment of the Project Area, and hereby allocates, out of \$11,000,000 of the general obligation bonds authorized for redevelopment purposes in the referendum of November 1960, the amount of \$272,183 representing the estimated amount of its share of Net Project Cost;

(e) Authorizes the Mayor, upon the execution of a Loan and Grant Contract between the Providence Redevelopment Agency and the Secretary of Housing and Urban Development to convey to the Agency all of its rights, title and interest in the parcels of land or any building or structure thereon described below and

shall receive credit on its obligations hereunder for the full and fair market value thereof as approved by the government, now estimated at Thirty Six Thousand Six Hundred and Twenty Five (\$36,625) Dollars.

Parcel 10-1 (A.P. 5 - Lot 198)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the northeasterly corner of Assessor's Lot 198, Assessor's Plat 5 dated December 31, 1966;

thence, running southerly a distance of one hundred and twenty two (122) feet, more or less to a point;

thence, turning and running westerly a distance of thirty one (31) feet, more or less to a point;

thence, turning and running northerly a distance of one hundred and twenty one (121) feet, more or less to a point;

thence, turning and running easterly a distance of forty (40) feet to the point and place of beginning.

Said tract herein described contains four thousand, two hundred ninety five (4,295) square feet of land, more or less.

Parcel 9-5 (A.P. 5 - Lot 190)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the southwesterly corner of Assessor's Lot 190, Assessor's Plat 5 dated December 31, 1966;

thence, running northerly a distance of eighty (80) feet, to a point;

thence, turning and running easterly a distance of eighty (80) feet to a point;

thence, turning and running southerly a distance of eighty (80) feet to a point;

thence, turning and running westerly to the point and place of beginning.

Said tract herein described contains six thousand, four hundred (6,400) square feet of land, more or less.

Parcel 9-11 (A.P. 5 - Lot 265)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the southwesterly corner of Assessor's Lot 265, Assessor's Plat 5 dated December 31, 1966;

thence, running northerly a distance of eighty (80) feet, to a point;

thence, turning and running easterly a distance of forty (40) feet, to a point;

thence, turning and running southerly to a point on the northerly street line of Abbott Street;

thence, turning and running westerly along the northerly line of Abbott Street to the point and place of beginning.

Said tract herein described contains three thousand (3,000) square feet of land, more or less.

Parcel 14-15 (A.P. 5 - Lots 458, 459, 460 and 461)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the southeasterly corner of Assessor's Lot 458, Assessor's Plat 5 dated December 31, 1966;

thence, running westerly a distance of two hundred (200) feet, to a point;

thence, turning and running northerly a distance of eighty seven and 92/100 (87.92) feet, to a point;

thence, turning and running easterly to the northeasterly corner of Lot 458;

thence, turning and running southerly a distance of eighty nine and 47/100 (89.47) feet, more or less to the point and place of beginning.

The above tract may be further described as being all of lots 458, 459, 460 and 461. Said tract herein described contains seventeen thousand, seven hundred forty one (17,741) square feet of land, more or less.

Parcel 9-7 (A.P. 9 - Lot 7)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the southwesterly corner of Assessor's Lot 358, Assessor's Plat 5 dated December 31, 1966;

thence, running northerly a distance of forty (40) feet to a point;

thence, turning and running easterly a distance of eighty (80) feet, to a point;

thence, turning and running southerly a distance of forty (40) feet, to a point;

thence, turning and running westerly a distance of eighty (80) feet, to the point and place of beginning.

Said tract herein described contains three thousand, two hundred (3,200) square feet of land, more or less.

Parcel 15-1 (A.P. 5 - Lots 445 and 163)

That certain tract of land situated in the City of Providence, State of Rhode Island bounded and described as follows:

Beginning at a point, said point being the southwesterly corner of Assessor's Lot 163, Assessor's Plat 5 dated December 31, 1966;

thence, running northerly to a point, said point being the southwesterly corner of Lot 464;

thence, turning and running easterly a distance of seventy eight and 10/100 (78.10) feet, more or less to a point;

thence, turning and running northerly a distance of one hundred (100) feet, to a point;

thence, turning and running easterly a distance of two hundred eighty and 34/100 (280.34) feet, more or less to a point;

thence, turning and running southwesterly and southerly for a distance of two hundred thirteen and 18/100 (213.18) feet, more or less to a point;

thence, turning and running westerly to the point and place of beginning.

The above tract may be further described as being Lots 163 and 445. Said tract herein described contains fifty six thousand, seven hundred twenty eight (56,728) square feet of land, more or less.

(g) Declares that in addition it will furnish \$96,035 which sum represents a portion of the total estimated cost of the following public and supporting facilities: the Cypress Street Playground and the Pleasant Street Park.

(h) Declares that after completion of all street construction, and facilities, water line, storm and sanitary sewer construction the Redevelopment Plan, all ways within the Project Area scheduled to become public ways and all the aforementioned facilities and utilities shall be dedicated by the Agency to the public and the City shall accept such dedication.

(i) Stands ready to consider and take appropriate action upon any other proposals and measures designed to effectuate said Redevelopment Plan.

13. It is further found and determined that the method and means set forth in the Redevelopment Plan for relocating families who are to be displaced by the project is feasible; and that the proposals set forth in the Relocation Plan for the proper relocation of the families displaced in carrying out the Project in decent, safe, and sanitary dwellings in conformity with acceptable standards are feasible and can be reasonably and timely affected to permit the proper prosecution and completion of the Project; and that such dwellings or dwelling units available or to be made available to such displaced families are at least equal in number of the number of displaced families, are not generally less desirable in regard to public utilities and public and commercial facilities than the dwellings of the displaced families in the Project area, are available at rents or prices within the financial means of the displaced families, and are reasonably accessible to their places of employment.

14. That it is hereby found and determined that the objectives of the Official Redevelopment Plan for the Mount Hope Project No. R.I. R-18 cannot be achieved through more extensive rehabilitation of the area described, referred to in and made a part of said Official Redevelopment Plan.

15. It is hereby found and determined that the Official Redevelopment Plan gives due consideration to the provision of adequate park and recreational areas and facilities as may be desirable for neighborhood improvement with special consideration for health, safety and the welfare of children residing in the general vicinity of the site covered by said Plan.

16. It is hereby found and determined that there are educational institutions and a hospital located in or near the area covered by the Plan, and it is further found and determined that in addition to the elimination of slums and blight from such area, the undertaking of the Redevelopment Plan in such area

will further promote the public welfare and the proper development of the community (1) by making land in such area available for disposition, for uses in accordance with the Official Redevelopment Plan, to such educational institutions or hospital for redevelopment in accordance with the use or uses specified in the Official Redevelopment Plan, (2) by providing, through the redevelopment of the area in accordance with the Official Redevelopment Plan, a cohesive neighborhood environment compatible with the functions and needs of such educational institutions or hospital, or (3) by any combination of the foregoing.

17. It is hereby further found and determined that consideration has been given in the Official Redevelopment Plan for the project area to the development of a sewer system to serve the project area which will, to the maximum extent feasible, provide for effective control of storm and sanitary wastes.

18. To obtain the additional financial assistance under the provisions of Title I of the "Housing act of 1949", as amended, necessary to carry out the Official Redevelopment Plan for said Project Area, the filing by the Providence Redevelopment Agency of any application or applications for such additional financial assistance under Title I of the "Housing act of 1949" as amended, is hereby approved.

19. This Ordinance shall take effect on its passage and shall be filed with the City Clerk who is hereby authorized and directed to forward a certified copy of this Ordinance to the Providence Redevelopment Agency.

PROJECT NO. R. I. R-18

MOUNT HOPE PROJECT

THE REDEVELOPMENT PLAN

Introduction

The Mount Hope Project Area originally formed the major portion of one of six treatment areas selected for residential conservation by the Community Renewal Program prepared in 1964, and was then tentatively known as "Camp Street 2". The renewal project itself originated at a later date with the reported and confirmed readiness of area residents to participate in a needed program of neighborhood rehabilitation, and with the availability of a local grant-in-aid from a portion of the construction cost of the Lippitt Hill School which will serve the Mount Hope Area.

The project lies within an area bounded by Doyle Avenue, North Main Street, Rochambeau Avenue, and Camp Street, and at the time of the adoption of this Plan is located within Redevelopment Area D-7. With the designation of this area for urban renewal action, the last remaining portion of the Community Renewal Program treatment area on the East Side of the City will be included in a renewal program.

The Mount Hope Area contains a substantial amount of structures in a physically deficient, substandard or deteriorated condition. The Agency's housing and non-residential building inspections indicate that 153 or 30% of the 509 structures in the project area were in such condition as described more fully in section B-2 entitled "The Project Area as a Blighted Area".

B. Description of Project Area

1. Boundaries of Urban Renewal Area

(a) The project area boundaries are delineated on Map No. 1, "Existing Land Use and Zoning".

(b) A legal description of the boundaries of the project area is attached as Exhibit A.

The project area boundaries have been established without regard to race, creed, color, or national origin of area residents.

2. Redevelopment Plan Objectives

(a) The project area as a blighted area

The Mount Hope Project Area is a deteriorated, blighted area under the definition of the "Redevelopment Act of 1956" as amended to date since there exists in the project area buildings or improvements, either used or intended to be used for living, commercial, industrial, or other purposes, or any combination of such uses, which by reasons of (1) dilapidation, deterioration, age or obsolescence, (2) inadequate provision for ventilation, light, sanitation, open spaces, and recreational facilities, (3) high density of population and overcrowding (4) unsafe character or condition of physical construction, (5) defective or inadequate street and lot layout, (6) mixed character, shifting or deterioration of uses to which they are put, or any combination of such factors and characteristics, are conducive to the further deterioration and decline of the area to the point where it might become a slum blighted area, are detrimental to the public health, safety, morals, and welfare of the inhabitants of the community and state generally. The project area is not restricted, nor does it consist entirely of land, buildings, or improvements which of themselves are detrimental or inimical to the public health, safety, morals, or welfare, but is an area in which such conditions exist and injuriously affect the entire area.

Evidence of physical deterioration and deficiencies was compiled from data produced with the use of (1) the A.P.H.A.'s Appraisal Method for Measuring the Quality of Housing, supplemented by the Providence Building Code for all residential buildings, and (2) an evaluation of non-residential structures performed by the Inspectors of the Providence Building Inspection Department using standards which were derived from the Building Ordinance of the City of Providence.

The results obtained from the use of these criteria are summarized as follows:

APHA Appraisal Method for Residential Structure Quality

	<u>No.</u>	<u>%</u>
1. <u>Total Residential Buildings</u>	<u>458</u>	<u>100</u>
Number Standard	336	74
Number Deficient	89	19
Number Substandard	33	7
<u>Total Dwelling Units</u>	<u>955</u>	<u>100</u>
Without Deficiencies	682	71
With Deficiencies	273	29
2. <u>Total Related Public Buildings</u>	<u>2</u>	<u>100</u>
Number Standard	2	100

Evaluation for Non-Residential Buildings

	<u>No.</u>	<u>%</u>
3. <u>Total Non-Residential Buildings</u>	<u>49</u>	<u>100</u>
Number Standard	17	35
Number Deficient	14	28
Number Substandard	18	37

Total Building Condition in the Mount Hope Area

<u>Total Buildings</u>	<u>All Bldgs.</u>		<u>Res.</u>		<u>Non-Res.</u>		<u>Rel. Pub.</u>	
	<u>509</u>	<u>100%</u>	<u>458</u>	<u>100%</u>	<u>49</u>	<u>100%</u>	<u>2</u>	<u>100%</u>
Number Standard	355	70	336	74	17	35	2	100
Number Deficient	103	20	89	19	14	28		
Number Substandard	51	10	33	7	18	37		
Number Substandard & Deficient	154	30	122	26	32	66		

As indicated above, 154 or 30% of the 509 total buildings in the project area were determined to be either deficient or substandard. Of the 955 total dwelling units inspected, 273 or 29% were found to have at least one or more basic deficiencies in essential dwelling facilities.

Basic deficiencies that have been found to exist in residential buildings include serious deterioration, serious overcrowding, lack of sanitary facilities, and inadequacies in heating and electrical facilities. A substandard residential building indicates a serious violation of minimum standards for continued dwelling occupancy and building safety that would justify the removal of occupants from the dwelling until the violation was corrected.

Deficiencies that have been found to exist in non-residential buildings include serious deterioration of roof and chimney, general exterior and interior, and foundation. Other deficiencies include inadequacy of wiring, plumbing, heating, and sprinkler system.

Of the 49 non-residential buildings surveyed, 17 were found to be standard, 14 were considered deficient, and 18 were considered as substandard.

Environmental deficiencies within the Project Area include the following:

Overcrowding of Buildings on Land

The Providence Zoning Ordinance states that every lot which is located in a R-3 General Residence Zone shall have a minimum width of 50 feet and a minimum area of 5000 square feet. Of the 618 residential lots in the Project Area, 453 or 73% are between 4,999 square feet and 3,000 square feet; and 93 or 15% are under 3,000 square feet. Moreover, of the 509 main buildings in the Project Area, 93 or 18% are 10 feet or closer to any other main or auxiliary structure.

Poorly Designed, Unpaved Streets

There are poorly designed and unpaved streets in the Project Area. Many dead-end, unimproved streets characterize the southerly one-third of the area, while the remainder of the area contains lots with poor access, streets having poor connections or poorly designed relationship to the topography.

Inadequate Provision for Open Space and Recreation

Inadequate public open space and recreational facilities exist in the Project Area. Small children are in need of localized tot lots exclusively for their age groups, which are presently non-existent in the area. Older children are also in need of recreational facilities to suit their needs. Moreover, the area does not contain any parks or other passive recreation areas for the enjoyment of the area residents.

Other Identified Health Hazards

1. Physical Condition

Storm drainage now combines with sanitary sewage throughout the project area, causing frequent dumping of raw sewage into the Moshassuck River.

separation of these lines is necessary to end this unhealthy condition and the threatened nuisance and hazards of sewage backflow from lines normally loaded to capacity.

2. Social Indices

The impact which blighted and substandard condition in the area may have on public health, safety, morals, and welfare is indicated by the following evidence of social breakdown assembled for recent periods from the records of public health and welfare agencies. The findings for the area bounded by Doyle Avenue, North Main Street, Rochambeau Avenue, and Camp Street are compared to the incidence of the same items for the city as a whole.

Ill Health - January 1961 - December 1965, 1.13 times the incidence of tuberculosis.

Transmission of Disease - January 1961 - December 1965, 3.12 times the incidence of venereal disease.

Illigitimate Births - January 1963 - December 1965, 6.94 times the incidence of illegitimate births.

Public Assistance - January 1961 - December 1965, 1.80 times the incidence of public assistance.

(b) Redevelopment Plan Objectives

This plan sets forth an outline for the redevelopment of land in the Mount Hope Project Area in accordance with the provisions of Chapter 31-33 inclusive of Title 45 of the General Laws of Rhode Island, 1956, as amended, referred to in this Plan by its short title, "Redevelopment Act of 1956", and with the provisions of the Housing Act of 1949 as amended to date. This plan constitutes an Urban Renewal Plan for the project area within the meaning of the Housing Act of 1949 as amended to date.

The project undertaking outlined by this Plan is designed to attain the purposes of the Redevelopment Act of 1956 by eliminating and preventing the recurrence of blighted and substandard conditions in the project area and by insuring the replacement of such conditions by the development of well-planned, integrated, stable, safe and healthful neighborhood(s).

Accordingly, specific objectives of this Plan shall include:

1. Maintenance of the present variety of physically adequate housing in residential sections;
2. Prevention of the spread and recurrence of blight;
3. Renewal of deteriorating areas to a long term sound condition;
4. Wherever necessary, feasible, and/or desirable the: 1) modernization of kitchen and bathroom facilities; 2) provision of 100amp electrical service; 3) paving or repaving and landscaping of walks, drives, parking areas, and yards; 4) elimination of asphalt siding; 5) provision of central heating facilities; 6) provision or replacement of fencing; and 7) provision or replacement of garages;
5. Improvement of structural condition and maintenance throughout the area by providing for the intensification of the enforcement of City code standards and the encouragement of the attainment of higher-than-code standards in the rehabilitation of structures; wherever possible a degree of rehabilitation higher than such project standards.
6. Rehabilitation by the Agency for demonstration purposes or disposition by the Agency for private rehabilitation of deteriorated structures;
7. Clearance of those deteriorated structures not rehabilitated;

8. Relocation of rehabilitable or standard structures where necessary and feasible;

9. Displacement of as few as possible of the current residents except when clearance is necessary for: a) the elimination of deteriorated structures which are not rehabilitated; and b) the provision of community facilities, necessary commercial or institutional uses, new residential development, or other project improvements;

10. Provision of sites for the expansion or development of necessary public community facilities, private institutional facilities, and public recreational facilities;

11. Provision of sites for appropriate new development replacing inadequate or inappropriate existing development;

12. Assistance in the orderly growth of major institutions in or adjacent to the area and the protection of existing residential development;

13. Substantial improvement in the quality of individual properties and living conditions so as to justify the construction or reconstruction of public facilities and improvements;

14. Establishment of a continuing program to maintain the renewed individual properties, public facilities, and improvements;

15. Retention in residential portions of the project of existing non-residential uses serving the neighborhoods involved;

16. Promotion of sound development and redevelopment in the Area by the provision and enforcement of controls governing the use and maintenance of land;

17. Enhancement of the physical environment of the Area by the separation of incompatible land uses and, where necessary, by the removal of incompatible land uses;

18. Improvement of circulation in the Area by the establishment of off-street parking requirements for developers in clearance sections;

19. Use of vacant land acquired or of other sites cleared by the Agency for:

- a) Off-street parking
 - b) Open space
 - c) Relocated structures
20. Requirements for appropriate new construction
21. Provision of street trees and public green spaces
22. New sidewalks throughout the Project Area
23. Separation of storm and sanitary sewer lines
24. Repaving of streets

In the execution of this Project the Agency shall give due consideration to the foregoing objectives. Where conflict among the objectives exists, the Agency shall consider those objectives which, in its opinion, best carry out the objectives of the Urban Renewal Plan.

3. Types of Proposed Renewal Actions

Proposed redevelopment activities shall include, but not be limited to:

- (a) acquisition of either land or buildings or both;
- (b) rehabilitation of both residential and non-residential properties;
- (c) relocation of site occupants;
- (d) demolition and clearance;
- (e) installation of site improvements;
- (f) expansion of recreational and institutional facilities;

(g) changes in zoning; (h) intensified enforcement of local ordinances; and (i) disposition of land and/or buildings; (j) relocation of rehabilitated or standard structures.

(a) Private Improvements

The major activity in the Mount Hope Project Area will be the rehabilitation of residential and non-residential structures with some spot clearance. However, the clearance spots are not extensive and the entire project area is considered as a rehabilitation project. Therefore, no formal clearance program is proposed. The project area possesses residential qualities, desirable location, organized citizens' groups, and other evidences of vitality assuring that conservation activities will restore this area to be a sound condition. Minimum Property Standards have been established jointly by this Agency and the Federal Housing Administration (see Exhibit B) for residential rehabilitation throughout the area.

(1) Changes in rights-of-way including new streets to be established, proposed street widenings and other street adjustments, and utility easements to be extinguished and established are shown on Map No. 4, "Right-of-Way Adjustments".

(2) Modifications in public utility systems serving the project area including retention, abandonment, extension and improvement of sewer,

water and the fire and police alarm systems are shown on the following maps:

Map No. 5, "Public Utilities - Storm Drains and Sanitary Sewers".

Map No. 6, "Public Utilities - Water Distribution"

Map No. 7, "Public Utilities - Fire and Police"

All new public utilities will be placed underground.

(3) There will be street trees planted along all existing streets to remain, and along new streets, and public walkways.

(4) New concrete sidewalks will be provided where there is not presently a concrete or asphalt sidewalk in good condition .

(5) Separation of storm drainage from sewerage lines is to be carried out throughout the project area so as to end the dumping of raw sewage into the Moshassuck River, and to reduce the load on sewer lines that are now filled to capacity.

(6) Public walkways with appropriate street furniture and landscaping will be located generally within the rights-of-way of portions of Steele Street, York Street, Knowles Street, Abbott Street, Pleasant Court, and Bugbee Court. Other walkways will be provided within residential blocks, park and recreational areas so as to complete the pedestrian walkway system. (See Map No. 8, "Site Improvements").

Standards for the design and construction of site improvements are to conform with the standards and practices in effect in the City of Providence in the construction of municipal public works. Approval of plans for the installation of all public works are to be obtained from the Public Works Department, or other City agencies responsible for the improvements.

C. LAND USE PLAN

1. Land Use Map

See Map No. 2, "Proposed Land Use and Zoning"

2. Land Use Provisions and Building Requirements

a. Statement of Uses to be Permitted

In order to achieve the objectives of this Redevelopment Plan, the following controls shall restrict the use and development of those areas acquired for demolition or subject to rehabilitation. The various permitted land use categories are depicted on Map No. 2 "Proposed Land Use and Zoning". The construction of new public housing units is not contemplated for the project area.

(1) R-3 General Residence Zone

(a) Permitted Uses - Permitted uses shall be limited to:

((1)) One family, two family, row or multiple dwelling, park, playground or community center or other institutional or semi-public uses owned and operated by the government agency or by a charitable or non-profit agency provided that the same shall not be used for private profit; parking garages, and other such buildings and uses necessary and customarily incidental to these permitted uses; parking area where the area adjoins a commercial zone, as an accessory use to a commercial building, provided such transitional use does not extend more than 100 feet from the boundary of the less restricted zone;

((2)) The following uses will be allowed if their location is first approved by the Agency and then by the Zoning Board of Review:

Nursing or rest home.

(b) Development Controls

((1)) Maximum Dwelling Density - The maximum dwelling density shall not exceed twenty-one (21) family living units per acre.

((2)) Minimum Lot Size - The minimum lot size for single-family detached housing shall be 6,000 square feet; for two-family detached housing 7,000 square feet. The minimum frontage for single family detached housing shall be 60 feet; for two family detached housing, 65 feet.

If row housing is to be constructed and attached dwellings and premises are to be subsequently disposed of for single-family or two-family use in separate ownership, the minimum lot area requirements shall be 5,000 square feet per dwelling unit.

((3)) Maximum Land Coverage - Not more than 40 per cent of the area of lot may be covered by buildings or structures.

((4)) Minimum Building Setback - For one-or-two family structures the setback distances shall be (1) at least 15 feet from building to street line, (2) at least 10 feet from building to side lot line, and (3) at least 25 feet from building to rear lot line.

For all other permitted structures the setback distance from any dwelling structure or principal building shall be (1) at least 15 feet from building to street line or parking area (2) at least 15 feet from building to side lot or side site line; provided, however, that no such setback shall be required where the party wall of an attached dwelling is located on such lot line, and (3) at least 15 feet from building to rear lot line; provided, however, that where the building wall contains living room

windows, the setback from side or rear lot lines shall be at least 25 feet.

The minimum distance between principal buildings shall be 12 feet.

((5)) Maximum Building Height - Maximum 2 stories or 40 feet above the average grade of the adjoining ground along the front wall of the building.

((6)) Minimum Building Construction - The construction of buildings shall conform to the regulations set forth in Chapter 1079 of the Ordinances of the City of Providence known as the "Building Ordinance of the City of Providence" adopted December 21, 1956, as amended, and all future amendments thereto.

((7)) Minimum Dwelling Accommodations - All living units shall be full family dwelling accommodations having separate and private access, and complete bathroom and kitchen, and shall be otherwise in full conformity with the requirements of Chapter 1040, Ordinances of the City of Providence, "An Ordinance Providing Minimum Standards for Housing", as approved July 19, 1956 and as amended to the date of approval of this Redevelopment Plan by the City Council.

((8)) Permitted Signs - any exterior sign displayed shall pertain only to a use conducted on the premises, and shall not extend above the roof level.

No sign shall be flashing or animated. No freestanding sign shall be permitted.

In residential areas, one name plate for each dwelling unit not exceeding 1 1/2 square feet in area indicating the name of the occupant or any permitted occupation shall be permitted.

Wall signs shall not extend or project beyond any building line more than 12 inches or exceed four (4) square feet in area for every foot occupied by the front of the building displaying such sign.

All signs must be suitably integrated with the architectural design of the structure which they identify. The size, design, placement and number of signs must be specified in all Redevelopment proposals. All proposed signs as well as exceptions to the above controls, or the placement or replacement of any sign during the duration of the plan must be approved by the Redevelopment Agency.

((9)) Minimum Off-Street Parking - Off-street parking shall be provided in the ratio of one automobile space for (1) each individual or family dwelling accommodation, (2) every ten (10) seats in that portion of the building used as a place of assembly, (3) every 200 square feet of that portion of a building used as a place of assembly where there are no fixed seats, (4) every 500 square feet in that portion of a building used for office space related to public and/or institutional uses.

((10)) Minimum Off-Street Parking Space Construction - All off-street parking and loading areas on these sites including drives and other access ways, shall be adequately paved with bituminous or cement concrete or other equivalent surfacing material, and shall be provided with appropriate bumper and wheel guards where needed; driveways extending into the right-of-way shall be paved in concrete only, and illumination shall be so arranged as to shield the light source from adjoining lots and abutting streets;

((11)) Screening of Uses and Premises - The following uses shall be screened from the view of adjoining residential uses and streets by solid wall, compact evergreen screen, or uniformly painted board fences not less than 4 feet in height which will be approved by the Providence Redevelopment Agency; (1) off-street parking areas, containing 3 or more parking

spaces; (2) commercial parking areas which extend into or abut the R-3 General Residence Zone; (3) outdoor storage and utility areas.

((12)) Landscaping and On-Site Improvements and Maintenance -

All sites shall be properly graded and drained. All unbuilt areas of the site shall be provided where needed with suitable walks and access drives properly designed and constructed. All unbuilt and unpaved areas of the site shall be suitably planted and permanently maintained with either grass, ground cover, shrubs, and trees. After fully developed, the land, buildings and other improvements in all sites of the project area shall be maintained in good repair and in clean and sanitary condition. Sufficient and suitable refuse and garbage storage and disposal facilities, including structural enclosures where appropriate, shall be provided and properly maintained.

(2) C-4 Heavy Commercial Zone

(a) Permitted Uses - Permitted uses shall be limited to

((1)) Park, playground or community center; parking; bank; bird store, pet shop or taxidermist; blueprinting or photostating; catering establishment; department, furniture or radio store; film exchange, funeral parlor, interior decorating store, medical or dental clinic or laboratory; parking garage, pawnshop, self-service laundry, supermarket, theatre, wholesale merchandise broker excluding wholesale storage;

((2)) The following uses shall be conducted wholly within a building except for such off-street loading and automobile parking as shall be required by these regulations: bakery, barber shop or beauty parlor;

book or stationery store; clothes cleaning agency or pressing establishment; club, lodge (non profit) or fraternal association; confectionery store, custom dressmaking or millinery shop; drug store, dry goods or notion store; florist or gift shop; grocery, fruit, or vegetable store; hardware or electric appliance store; jewelry store, laundry agency, meat market or delicatessen; music store or newsstand; office, business or professional; package liquor store, photographer, restaurant, tea room or cafe; shoe store or shoe repair shop; tailor, clothing or wearing apparel store; variety store; local government enterprises;

((3)) The following uses shall be conducted wholly within a building except for such off-street loading and automobile parking as shall be required by these regulations: art or antique shop; second hand store; upholstering shop;

((4)) Greenhouse, nursery, flower or plant - provided all incidental equipment is kept wholly within a building;

((5)) Public Service - including electric distributing sub-station, fire or police station, telephone exchange and the like;

((6)) Sign painting or tire shop - provided all activities shall be conducted wholly within a building;

((7)) The following uses provided they shall be conducted wholly within a building except for such off-street loading of delivery

vehicles and automobile parking as shall be required by these regulations, and provided further, that where such uses are within 50 feet of a lot in an R Zone, the building wall facing said R Zone shall have no openings other than stationery window openings unless the same are necessary for emergency egress:

a. Carpenter, cabinet shop, laundry or dry cleaning establishment, printing and binding establishment, plumbing or sheet metal shop, garage repair shop, but excluding manufacture, and provided not more than a one horsepower motor may be used with any one machine and not more than a total of three horsepower per shop and further provided that said shops shall be at least 200 feet from any lot in an R Zone and such uses shall not be noxious or offensive by reason of the emission of odor, dust, smoke, gas, noise or vibration;

b. Building material sales office and accessory storage of materials with a floor area not to exceed 3,000 square feet and including incidental millwork.

(b) Development Controls

((1)) Maximum Land Coverage - The total ground floor coverage of buildings shall not exceed 50 percent of the lot area.

((2)) Minimum Building Setback - No setback is required between any building line and street line. All buildings on lots abutting the R-3 Zone shall have a setback of 20 feet from building to line of R Zone.

((3)) Maximum Building Height - Buildings shall not exceed a height of 3 stories or 45 feet in height above the average grade of the adjoining ground along the front wall of the building.

((4)) Minimum Building Construction - Same as paragraph C-2-a-(1)-((6)) above.

((5)) Permitted Signs - Same as paragraph C-2-a-(1)-((8)) above.

((6)) Minimum Off-Street Parking and Loading Space - The redeveloper must demonstrate that off-street parking and loading facilities are adequate in number, size, location, access and arrangement to meet the operational requirements of the land and building uses proposed; provided, however, that in lieu of such demonstration, off-street parking space shall be provided in the ratio of at least one square foot of total lot(s) area for every one square foot of gross floor area; and shall include in addition at least one off-street loading space of adequate size for access, maneuverability, and operational use for every 20,000 square feet or fraction thereof in excess of 4,000 square feet of floor area devoted to a use that involves the receipt or distribution by vehicles of material or merchandise.

((7)) Minimum Off-Street Parking and Loading Space Construction - Same as paragraph C-2-a-(1)-((10)) above.

((8)) Screening of Uses and Premises - Off-Street Parking, loading and outdoor storage and utility areas shall be screened from residential uses and in the manner described in paragraph C-2-a-(1)-((11)) above.

((9)) Landscaping and On-Site Improvement and Maintenance - Same as paragraph C-2-a-(1)-((12)) above.

b. Additional Regulations, Controls or Restrictions to be Imposed by the Plan on the Sale, Lease or Retention of Real Property to be Acquired

(1) Wherever the controls in this Plan restricting the use and development of areas acquired for redevelopment conflict with the provisions of the Zoning Ordinance of the City of Providence as approved September 21, 1951 and has amended to the date of approval of this Redevelopment Plan by the City Council, the higher standards of this Redevelopment Plan or of the Zoning Ordinance shall govern.

(2) The Agency may, when it deems it advisable, file a petition with the Zoning Board for exceptions or variances to the Zoning Ordinance as provided in said Ordinance.

(3) Land sold to an adjoining owner shall first be utilized to satisfy requirements of this Plan with respect to his adjoining non-acquired property.

(4) The purchaser of land from the Agency shall obligate himself to provide for the necessary rehabilitation of his property in the Area not acquired by the Agency to the standards established by this Plan (See Exhibit B); and, after receipt of notice from the purchaser to the Agency that he has complied with requirements as noted above, and after the Agency has made a finding of such fact, the Agency will tender to the purchaser a certificate of completion suitable for recording with the recorder of deeds.

(5) The priorities for the use of scattered sites made available by the Agency shall be: 1) as sites for residential structures relocated from clearance sites in the Project Area; 2) as sites for off-street parking; 3) as sites for such other use and development as is consistent with this Plan.

(6) A report concerning the proposed sale or lease of any land within the Area shall be submitted to the City Council as a regular or special meeting at least ten (10) days prior to the execution of said sale or lease.

(7) In all sections, all structures housing non-conforming uses which uses, in the opinion of the Agency, are neighborhood-oriented and/or are not a blighting influence on the neighborhood shall be allowed to remain.

(8) In all sections, all structures housing conforming uses which uses, in the opinion of the Agency, are a blighting influence on the neighborhood shall be removed.

(9) Architectural and landscaping plans and specification as well as any other information as may be necessary shall be submitted prior to the sale of land by all redevelopers to the Providence Redevelopment Agency for its approval to insure their conformance with the provisions of this Redevelopment Plan.

c. Statement on the Effective Date and Duration of the Land Use Provisions and Building Requirements

The Providence Redevelopment Agency shall obligate redevelopers and their successors and assigns by deed or contract containing restrictive covenants running with the land which shall commence on the date of adoption of the redevelopment plan by the City Council and shall run for a period of forty (40) years thereafter, except that the restriction mentioned in sub-paragraph c (3) below shall run for a perpetual length or period of time;

(1) To use and devote such real property only for the purposes and in the manner stated in the Redevelopment Plan.

(2) To comply with such terms and conditions relating to the use and maintenance of the real property as in the opinion of the Providence Redevelopment Agency are necessary to carry out the provisions of the Redevelopment Plan.

(3) To provide that at no time shall the acquisition, use, disposal, or conveyance of land or improvements within the project area to or by any persons be denied, restricted or abridged, nor his occupancy or possession thereof preferred, segregated or refused because of his race, religion, color, or nationality of ancestry. Furthermore, each redeveloper shall comply with all Federal, State, and local laws, in effect from time to time, prohibiting discrimination or segregation by reason of race, religion, color, or national origin in the sale, lease or occupancy of any project.

(4) To comply with such terms and conditions as are specified by the Providence Redevelopment Agency which will prevent holding of land for speculative purposes.

(5) To begin and complete the building improvements within a period of time deemed by the Providence Redevelopment Agency to be reasonable, subject to any provision which may be made for the extension of the time limit with the approval of the Agency.

(6) To maintain original construction and appearance of buildings, land and improvements and additions thereto on all sites of the project area which shall be maintained in good repair and in safe, clean and sanitary condition.

(7) That sale or other disposition of the land at a profit shall be prohibited until such time as the initial purchaser thereof has completed the construction of such initial improvements; provided, however, that the Providence Redevelopment Agency, when these improvements have been completed, shall forward to said purchaser a certificate to that effect.

(8) That the land and all improvements thereon shall be used and developed only for the purposes and in the manner stated in the Redevelopment Plan for the Mount Hope Project.

(9) That said land and any improvements thereon shall be maintained in such a manner as not to cause surrounding properties to be depreciated or impaired in value.

(10) That the redeveloper will be required to submit a progress schedule satisfactory to the Providence Redevelopment Agency.

(d) Applicability of Provision and Requirements under C-2a and C-2b to Real Property not to be Acquired.

Rehabilitation standards submitted herewith as Exhibit B and Controls in C-2a above applicable to both residential and non-residential properties within the project area. Properties not to be acquired will also conform to said controls subject to the physical limitations of the site and applicable state law.

(e) Zoning

1. Proposed Zoning

See Map No. 2, "Proposed Land Use and Zoning Plan", which shows the zone districts to be established within the Project Area.

2. Identification of All Changes in Existing Zoning

See Map No. 1, "Existing Land Use and Zoning", which shows the zone districts existing within the Project Area, and Map No. 2, "Proposed Land Use and Zoning Plan", which shows the zone district proposed within the Project Area.

The provisions of the Zoning Ordinance of the City of Providence, as approved September 21, 1951, and as amended to the date of approval of this Redevelopment Plan by the City Council shall apply to the Project Area in addition to the provisions of this Redevelopment Plan.

D. Project Proposals

1. Land Acquisition

a. Identification of All Real Property to be Acquired for:

(1) Clearance and Redevelopment

All real property in the project area proposed to be acquired as shown on Map No. 3, "Proposed Acquisition" shall be acquired by direct negotiation and/or by the exercise of the power of eminent domain granted by law to the Agency. The method by which the Agency shall acquire and make payment for this property will be in accordance with the provisions of the "Redevelopment Act of 1956" as amended to date. Funds for such payment shall be made available by the Federal Government under a Loan and Grant Contract and the City of Providence through a redevelopment bond issue.

However, the Mount Hope Project Area is a rehabilitation rather than a clearance project and thus there is no extensive clearance. But treatment through rehabilitation will include spot clearance to remove blighting influences and buildings infeasible of rehabilitation, or clearance to provide land for public improvements or facilities which are necessary to achieve the objectives of the Urban Renewal Plan.

All structures on land acquired by the Agency (see Map No. 3 "Proposed Acquisition") shall be demolished, rehabilitated for demonstration purposes, sold to a developer, or

relocated. No structure to be rehabilitated in the Area may be demolished by the Agency until the Agency is satisfied that:

(a) The current owner cannot, within a time deemed reasonable by the Agency, properly rehabilitate the structure; or

(b) No other developer is available and willing, within a time specified by the Agency, to undertake the proper rehabilitation; or

(c) It is not either practicable or feasible in the Agency's opinion for the Agency or some other public body to undertake the necessary rehabilitation; or

(d) The clearance of the given structure is in the opinion of the Agency necessary to effectuate the proper development of a section of the area.

(2) Public Facilities

Public and community facilities contemplated within the project area are indicated on Map No. 2, "Proposed Land Use and Zoning", and Map No. 8, "Site Improvements" and are as follows:

- a. Woodbine Street Tot Lot
- b. Knowles Street Walkway
- c. Knowles Street Tot Lot
- d. Cypress Street Tot Lot
- e. Cypress Street Playground
- f. Padelford Street Walkway
- g. Padelford Street Tot Lot
- h. Pleasant Street Park
- i. Pleasant Court Walkway
- j. Y. M. C. A.
- k. Day Care Nursery

l. Community Center

m. Occupational Industrial Center

(3) Rehabilitation and Conservation

Rehabilitation activities shall include, but not by way of limitation

(a) the systematic enforcement of requirements contained in relevant City Ordinances; (b) the provision of technical assistance to facilitate building rehabilitation by private owners to levels above minimum legal requirements; (c) the elimination of non-conforming uses of land and buildings which are or become detrimental to the area; (d) the incidental acquisition of scattered land and buildings, or both; (e) the disposition of land and/or buildings; and (f) the demolition of structures thereon which cannot be rehabilitated at least to the level of those requirements which establish minimum standards for health and safety, all as described more fully in Exhibit B.

((a)) Residential Rehabilitation Standards

(1) Minimum Housing Standards

Minimum housing standards for acceptable dwelling rehabilitation within rehabilitation sections of the Area shall be those set forth in that Ordinance of the City of Providence entitled "An Ordinance Providing Minimum Standards for Housing", Chapter 1040, approved July 9, 1956, as amended.

(2) Residential Project Standards

In addition to the minimum requirements for rehabilitation set forth above, voluntary project standards for desirable dwelling rehabilitation and improvement shall consist of those standards which the Federal Housing Administration has established for eligibility for FHA financing.

These standards as adopted from FHA Publication No. 950, as amended, entitled "The Minimum Property Standards for Urban Renewal Rehabilitation," shall be applicable to the Area. They are attached as Exhibit B.

The Agency shall encourage the application of FHA standards, as specified above, for properties which are not financed under FHA programs.

((b)) Non Residential Rehabilitation Standards

(1) Minimum Non-Residential Standards

The Redevelopment Plan, The Building Ordinance of the City of Providence and the Zoning Ordinance of the City of Providence shall control all matters concerning the construction, alteration, addition, repair, removal, demolition, use, location, occupancy, and maintenance of all buildings and other structures and their service equipment and shall apply to existing buildings and other structures, including all non-residential structures in the project not acquired by this Agency.

All buildings, other structures, all parts thereof including service equipment, both existing and new, shall be maintained in a safe and sanitary condition as required by state and local laws.

The owner or his designated agent shall be responsible for the safe and sanitary maintenance of the building or other structure and its service equipment at all times.

(2) Non-Residential Project Standards

Owner of all non-residential properties shall be encouraged to undertake:

1. The cleaning or repainting of all exterior and interior metal, masonry, glass and woodwork where required.

2. The screening of all open storage;
3. The replacement of all broken, loose, or unsafe windows, doors, and store fronts;
4. The grading or regrading of all lots in such a manner as to provide a satisfactory drainage of water runoff away from buildings and from the lot to a public street or drainage casement;
5. The suitable surfacing or resurfacing of all driveways, parking areas, walks and plazas so as not to constitute a nuisance to the surrounding areas;
6. The proper landscaping of all other open areas;
7. The replacement of existing undesirable signs by the placement of new signs which in either case are to be:
 - (a) Non-flashing
 - (b) Integrated with the overall appearance of the structure to which the signs are affixed;
8. The repair, painting or replacement of fencing as required.

The implementation of rehabilitation standards as well as the execution of rehabilitation activities outlined above will involve essentially: (a) the enforcement by the City of its Minimum Standards Housing Ordinance; (b) the enforcement by the City of its Zoning Ordinance; (c) the enforcement by the City of its Building Ordinance; (d) the enforcement by the City of all other applicable ordinances; (e) the provision by the Agency of technical assistance to property owners and other private persons to implement and facilitate the voluntary rehabilitation and improve-

ment of property to project standards; and (f) the exercise from time to time and as necessary by the Agency of its power of selective clearance in order to secure the acquisition of single or scattered parcels of real property within the Area through purchase, condemnation or otherwise; and the rehabilitation or restoration for demonstration purposes or relocation of structures; and the demolition and/or removal of buildings or improvements thereon where necessary.

The Agency may acquire those non-residential properties whose owners are either unable or unwilling to make necessary improvements required for compliance with relevant site or local law. The Agency is also empowered to acquire those non-residential properties whose acquisition if necessary to eliminate incompatible, detrimental or noxious uses in accordance with the objectives of this Plan.

b. Properties Not Designated for Acquisition That May be Acquired

The Agency will acquire those properties presently not scheduled for acquisition but for rehabilitation when structures are not brought up to the level of the Minimum Standard Ordinance, the Zoning Ordinance, the Building Ordinance, and all other applicable Ordinances within a reasonable period of time.

c. Properties Identified to Be Acquired that May Not be Acquired

Those scattered parcels of property which are indicated to be acquired (See Map No. 3, "Proposed Acquisition") may not be acquired when the structures contained in these sites are brought up to Minimum Property Standards prior to the approval and execution of this Plan. Designation can only be made when results from additional surveys of structures

becomes available.

2. Rehabilitation and Conservation

Property Rehabilitation Standards to be established for real property within the Project Area which is not to be acquired is contained herein as Exhibit B, Minimum Property Standards for Rehabilitation.

3. Redevelopers' Obligation

The redevelopers, their successors in interest, lessees, or assigns, will be required, as an effective part of all agreements and conveyances for the disposition of any part or parcel of land in the project area, to observe all provisions of the Redevelopment Plan. It will be provided that the Providence Redevelopment Agency may extend these time limits if necessary to accomplish the objectives of the Urban Renewal Plan.

4. Underground Utility Lines

All new public utilities will be placed underground.

E. Other Provisions Necessary to Meet Local Requirements of Local Law

1. Conformity to General Plan and Community Improvement Program

This Redevelopment Plan is in conformity with all elements of the Master Plan of the City of Providence.

Proposed redevelopment activity in the project area is intended to implement (1) definite local objectives for planning action and (2) definite local objectives for community rebuilding as set forth in the Workable Program.

The Redevelopment Plan is consistent with objectives for appropriate land use; improved traffic, recreational and community facilities and other

public improvements. Also it adheres to the objectives of the Workable Program which are (1) to prevent new slums and deterioration; (2) to eradicate the wreckage of past; (3) to conserve what is strong, and rehabilitate what is weakened; (4) to renew the city's housing; (5) to provide a decent, safe and sanitary home for every citizen of Providence.

2. Method of Relocation

Families and individual householders who are to be displaced by Agency action within this Project Area will have the services of the Family and Business Relocation Service of the City made available to them when the Agency acquires the property they occupy. Suitable accommodations of adequate size in the private housing market, at a rental family can afford, and certified as decent, safe, and sanitary by a trained housing inspector, will be offered to any eligible family in the Project Area. This Relocation Service will continue functioning until all eligible families and individual householders living in the Project Area on the date of acquisition have been satisfactorily relocated into acceptable housing. Families eligible for public housing will receive priority in the low-rent developments of the Providence Housing Authority.

Businesses to be displaced by Agency action within the Area will have the services of the Business Relocation and Division of Economic Development of this Agency.

Financial assistance for relocation purposes shall be made by the Agency to families and businesses displaced from the Area, under the terms of Federal participation in the project undertaking, and Section 114 of Title I of the Housing Act of 1949 as amended, as well as rules and regulations of the

U. S. Housing and Home Finance Agency. Such payments shall be consistent with amounts authorized by law.

3. Method of Financing

This Plan is to be financed under the provisions of Title I of the Housing Act of 1949, as amended, and the Plan shall not become effective until approval in its entirety by the Housing and Home Finance Administrator any substantial modification shall be submitted to said Administrator for determination by him that such modification meets the terms and requirements of the contract for Federal financial assistance.

The estimated costs of carrying out this Redevelopment Plan are as follows:

ELIGIBLE PROJECT COSTS FOR COMPUTING FEDERAL AID

GROSS PROJECT	\$ 4,511,592
LAND PROCEEDS	198,417
NET PROJECT COST	4,313,175
FEDERAL GRANT	3,234,882
LOCAL SHARE ;	1,078,293

Additional City Costs

Modification of Streets

and Utilities \$ 174,911

Real Estate Taxes 30,000

Cost of Land and Development of Cypress & Pleasant

Sts. Parks 96,035

TOTAL \$ 300,946

Provisions of Federal Grant

The estimated Federal Grant of \$3,234,882 will be provided under the terms and conditions of a Loan & Grant Contract between the Providence Redevelopment Agency and the U. S. Housing and Home Finance Agency which will provide either for direct borrowing from the Federal Government and the issuance of preliminary loan notes secured by the Federal Government in an amount necessary to pay project expenditures.

Provisions of Local Share

The local share of \$1,078,293 will be met by (1) donation of City owned land within the project area presently estimated at \$36,625; (2) a Tot Lot constructed by the City in the Cypress Street Playground at a cost of \$20,000; (3) supporting facilities, (Cypress and Pleasant Street Playgrounds) \$66,985 and Lippitt Hill School, \$682,500 and (4) cash in the amount of \$272,183 from the proceeds of the sale of long term general obligation bonds issued by the City of Providence for redevelopment purposes.

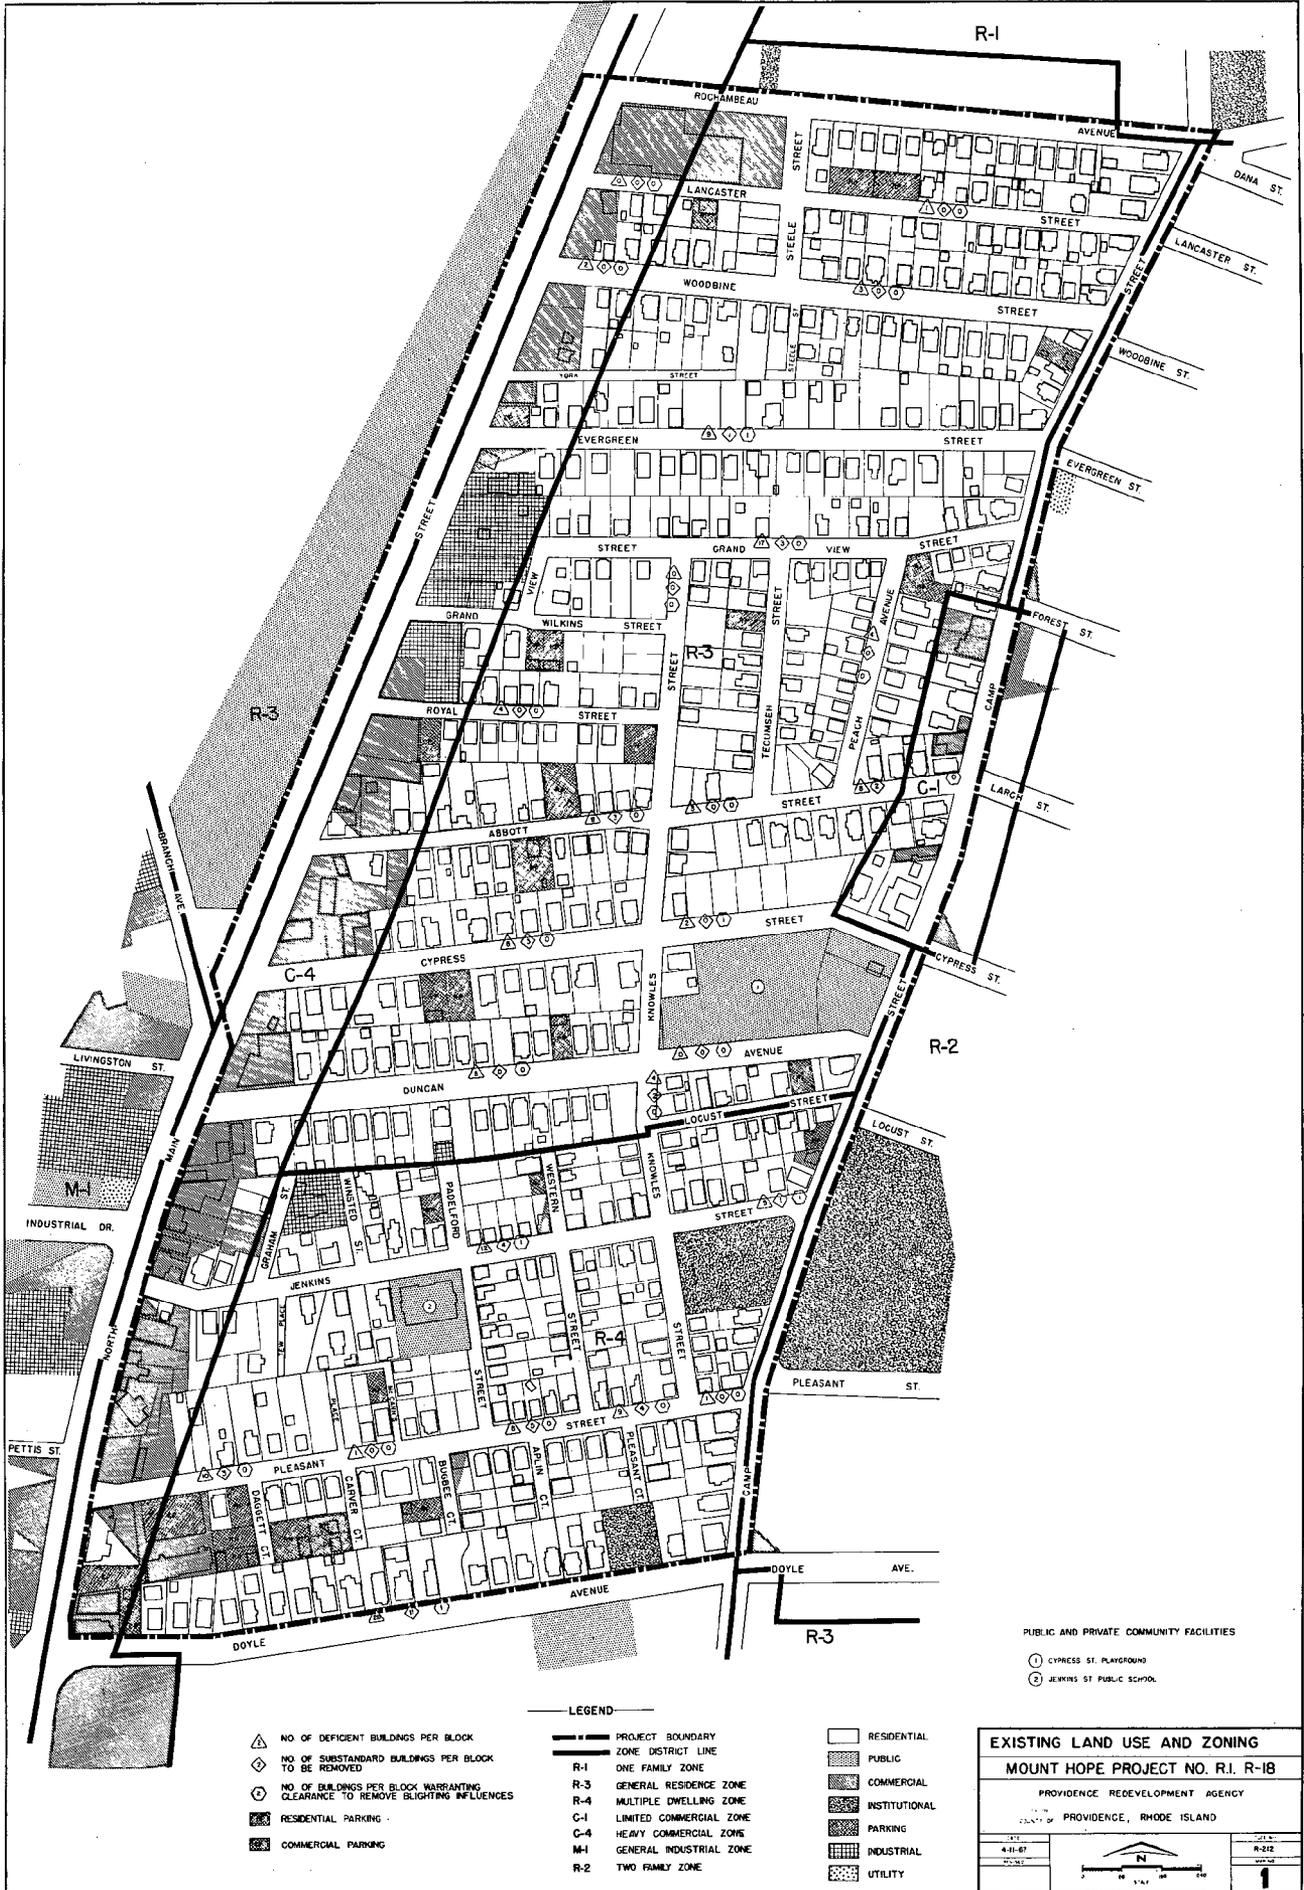

Provision of Additional City Costs

Additional city costs of \$300,946 for ineligible costs for streets and utilities, real estate tax payments and cost of land and development of the Cypress and Pleasant Streets Parks will be provided from funds set aside for these purposes.

F. Procedure for Changes in Approved Plan

Upon its own initiative or upon recommendation of the Agency, this Plan may be modified at any time by the City Council provided that if the Plan is modified after lease or sale by the Agency of real property in the Area, such modifications shall be subject to such rights at law and in equity as the lessee or purchaser or his successor or successors or assigns may be entitled to assert, provided however, that no change in any basic element of the Plan

shall be made without the prior approval of the Secretary of the Department of Housing and Urban Development and shall be conditional by the securing of an agreement to the change from all affected redevelopers. The term "basic element" shall mean any major change in any of the elements of the Plan.

INTRODUCTORY STATEMENT

PURPOSE AND INTENT

These Minimum Property Standards for Urban Renewal Rehabilitation of the Mount Hope Project Area have been developed to provide minimum design and construction standards for the rehabilitation of houses located in the conservation sections of the Project Area. It is intended that these standards be in the spirit of as well as aid in carrying out the objectives of the urban renewal program for neglected and run-down residential properties. By these objectives is sought the physical, social and economical regeneration of those properties and those portions of the conservation sections which have remained in a generally deteriorated condition.

The standards for urban rehabilitation are directed toward neighborhood improvement and the overcoming of deterioration and blight. The aim is not the creation of a neighborhood that necessarily compares well in design and construction with new neighborhoods. Likewise, the standards recognize the vast differences that exist among urban renewal areas and are designed specifically for the Mount Hope Project Area. The quality and condition of existing houses in Providence vary widely from one location to another and frequently, as is the case in Mount Hope, within a single area. Also, the amount of physical improvements which can be achieved will in some instances be sharply limited by the low incomes of the residents. Present residents, in general, are expected to continue living in the area after rehabilitation has taken place.

CHARACTERISTICS OF THESE STANDARDS

These Minimum Property Standards are significantly different from standards for new construction. This is necessary because most buildings in the Mount Hope Project Area were built long before FHA came into existence and by very different construction requirements and living customs. Some of these houses were built for a single family but have now been subdivided to accommodate two or more families. Thus, while satisfactory for one family by former patterns of living, these houses have now become sub-standard because of overcrowding and lack of sanitary and other conditions as well as lack of maintenance.

The many advances in building technology of the past generation which are now incorporated in new construction, being unknown at an earlier period, have never been included in older houses. Examples of this, among many, are the use of insulation, modern heating and cooling methods and easily installed new interior and exterior finishing materials. Therefore, these standards, in general, are lower than those that apply to new construction.

They have a built-in flexibility that permits judgment to be used by the local FHA insuring office in applying these provisions to the Mount Hope Project Area. However, there is a level of physical, social and economic conditions below which standards for rehabilitation should not be countenanced. The standards established for this area must result in a general upgrading and improvement of dwelling accommodations. The aim is to restore the area to a sound condition as to its economic life and its suitability for residential and other uses.

Throughout these standards there are some provisions that are mandatory. Items of this kind are expressed in the appropriate language of "shall be", "shall have", "provide", etc. Other items are included, which in addition to expressing the normal minimum standard, permit exceptions where conditions justify. Also, there are numerous statements which are advisory or guides to what constitutes minimum good practice, if obtainable, but where the practicability of the standard is left to be determined. Items of this kind are expressed as "in general, should be", "if possible", "it is recommended that", etc. and are identified by asterisks (*) on the right hand margin of the page. In these ways, essential flexibility is incorporated into these MPS.

APPLICATION

These Minimum Property Standards apply only to existing residential properties in the Mount Hope Project Area. These minimum standards are confined in their application to the individual property within its property lines. They are not concerned with improvements off the site except for the provision of streets for access and circulation, and for essential services and facilities.

APPLICABILITY OF OTHER CODES AND ORDINANCES

The requirements set forth in these Minimum Property Standards for Urban Renewal Rehabilitation in the Mount Hope Project Area shall supplement all state, county and municipal codes and ordinances applicable to the regulation and control of existing buildings or any repair, alteration, or renovation thereof. The rehabilitation of any building within the Mount Hope Project Area under the standards herein contained shall also be in compliance with all such applicable codes, ordinances and regulations. These include but are not limited to:

- a) Building Ordinance of the City of Providence, Chapter 1079 approved December 21, 1956, as amended by Chapter 1103 approved March 22, 1957, Chapter 1286 approved September 4, 1959, Chapter 1308 approved December 4, 1959, Chapter 1376 approved

December 16, 1960, Chapter 1474 approved May 18, 1962, Chapter 1532 approved March 8, 1963, and Chapter 1643 approved September 8, 1964.

This ordinance combines the structural, heating, plumbing, electrical and mechanical requirements into one comprehensive code.

- b) Minimum-Standards Housing Ordinance of the City of Providence, Chapter 1040 approved July 9, 1956, as amended by Chapter 1108 1513 approved December 21, 1962, and Chapter 1514 approved December 21, 1962.
- c) Zoning Ordinance of the City of Providence, Chapter 544 approved September 21, 1951, as amended as to text some 20 times to date and as to map changes more frequently.

It is recommended that for new construction and for rehabilitation of existing structures, the following publications of the Federal Housing Administration be consulted:

1. Minimum Property Standards for Urban Renewal Rehabilitation, One Through Eleven Living Units - FHA No. 950
2. Minimum Property Standards for One and Two Living Units- FHA No. 300
3. Minimum Property Requirements for Multifamily Housing - FHA No. 2600
4. Minimum Property Standards for Low Cost Housing - FHA No. 18

CHAPTER I

DEFINITIONS

R100 GENERAL

R100-1 Abbreviations, terms, phrases, and words and their derivatives used in these Minimum Property Standards shall have the meanings given in this section.

R100-2 The terms defined herein apply only for the purposes of these minimum property standards. Where differences exist in the terms herein defined from identical or similar definitions to be found in other applicable codes, ordinances or regulations, the more restrictive definitions shall be applied.

R101 DEFINITIONS

Accessory Building: A secondary building, the use of which is incidental to that of the main building and which is located on the same plot.

Addition: Any construction which increases the size of a building or adds to the building such as a porch or an attached garage or carport.

Alley: A service way providing a secondary public means of access to abutting properties.

Alteration: Construction which may change the floor plan, structural parts, mechanical equipment or location of openings but which does not increase the size of the building.

Area:

Building Area: The total ground area of each building and accessory building but not including uncovered entrance platforms, terraces, and steps.

Floor Area: The total area of all stories or floors finished as living accommodations. This area includes bays and dormers but does not include space in garages or carports or in attics. Measurements are taken to the outside of exterior walls.

Attic: Accessible space between top of uppermost ceiling and underside of roof. Inaccessible spaces are considered structural cavities.

Basement: A space of full story height below the first floor which is not designed or used primarily for yearround living accommodations. (See definition of First Story for below-grade space which is primarily used for habitable rooms.)

Basementless Space (Crawl Space): An unfinished, accessible space below the first floor which is usually less than full story height.

Bearing: That portion of a beam, truss, or other structural member that rests on the supports.

Building Line: A line established by law or agreement usually parallel to property line, beyond which a structure may not extend. This generally does not apply to uncovered entrance platforms, terraces and steps.

Carport: A roofed space having at least one side open to the weather, primarily designed or used for motor vehicles.

Cellar: That space of a building which is partly or entirely below grade having more than half of its clear height below the average grade of the adjoining ground.

Construction Classifications: A classification of buildings into types of construction which is based upon the fire resistance of walls, floors, roofs, ceilings and other elements.

Type 1, Fire-resistive Construction: That type of construction in which the walls, partitions, columns, floors, roof, ceilings and other structural members are noncombustible with sufficient fire resistance to withstand the effects of a fire and prevent its spread from one story to another.

Type 2, Noncombustible Construction: That type of construction in which the walls, partitions, columns, floors, roof, ceilings and other structural members are noncombustible but which have less fire resistance ratings than that required for Type 1, fire-resistive construction.

Type 3, Exterior Protected Construction: That type of construction in which the exterior walls are of noncombustible construction having a fire resistance rating as specified and which is structurally stable under fire conditions and in which the interior structural members and roof are wholly or partly of combustible construction. Type 3 construction includes two sub-types, namely heavy timber and protected constructions, the latter also being known as "ordinary" construction.

Type 4, Wood Frame Construction: That type of construction in which the exterior walls, partitions, floors, roof and other structural members are wholly or partly of wood or other combustible materials which may or may not be assembled to provide a specified fire resistance rating.

Court:

Inner Court: An open, outdoor space enclosed on all sides by exterior walls of a building or by exterior walls and property lines on which walls are allowable.

Outer Court: An open, outdoor space enclosed on at least two sides by exterior walls of a building or by exterior walls and property lines on which walls are allowable, with one side open to a street, driveway, alley, or yard.

Crawl Space: Same as Basementless Space.

Dampproofing: A treatment of a surface or structure which retards the passage of water. See Waterproofing.

Driveway: A private way for the use of vehicles and pedestrians.

Dwelling: A building designed or used as the living quarters for one or more families.

Detached: A dwelling which is completely surrounded by permanent open spaces.

Semi-detached: A dwelling, one side wall of which is a party or lot-line wall.

Row: A dwelling, the walls on two sides of which are party or lot-line walls.

End-row: Same as semi-detached.

Dwelling Unit: See Living Unit

Easement: A vested or acquired right to use land other than as a tenant, for a specific purpose, such right being held by someone other than the owner who holds title to the land.

Exit: A way to get from the interior of a building or structure to the outside at grade level. A secondary exit may, under certain conditions, provide only emergency egress to an adjacent building or roof, from which safe travel can be made to grade level.

Family: One or more persons occupying a single living unit. Such persons do not have to be related by birth or marriage to constitute a family unit.

Fire Area: The floor area of a story of a building within exterior walls, party walls, fire walls or any combination thereof.

Fire Door: A door, including its frame, so constructed and assembled in place to prevent or retard passage of flame or hot gases.

Fire-Proof: An obsolete term meaning fire-resistive. Usually used with Type I construction.

Fire Resistance: That property of construction assemblies, which under fire conditions, prevents or retards the passage of excessive heat, hot gases or flames.

Fire-resistance Ratings: Time in hours or fractional parts thereof that a material, construction or assembly will withstand fire exposure, as determined in an acceptable fire test.

Fire Resistive: That quality of materials and assemblies to resist fire and prevent its spread.

Fire Retardant Lumber: Wood so treated by a recognized impregnation process so as to reduce its combustibility.

Fire Separation: A construction of specified fire resistance separating parts of a building horizontally or vertically as required.

Firestopping: A barrier within concealed spaces which is effective against spread of flames or hot gases.

Flame-resistant: That property of a material which is flame resistant by nature or has been made so by an accepted method.

Flame Spread: The propagation of flame over a surface.

Flashing: Sheet metal or other impervious material used in roof and wall construction to protect a building from seepage of water.

Floor: See Story.

Foundation: Construction, below or partly below grade, which provides support for exterior walls or other structural parts of the building.

Garage: A building or enclosure primarily designed or used for motor vehicles.

Attached: A garage having all or part of one or more walls common to the dwelling or to a covered porch attached to the dwelling.

Detached: A garage which is completely surrounded by open space. A garage connected to the dwelling by an uncovered terrace is defined as a detached garage.

Built-in: A garage located within the exterior walls of a dwelling.

Grade, finish: The top surface elevation of lawns, walks, drives, or other improved surfaces after completion of construction or grading operations.

Gradient: The slope, or rate of increase or decrease in elevation of a surface, road or pipe, usually expressed in percent.

Habitable Room: See Room.

Height, Building: Vertical distance measured from curb or grade level, whichever is the higher, to the highest level of a flat roof or to the average height of a pitched roof, excluding penthouse or other roof appendages occupying less than 30 percent of the roof area. Where a height limitation is set forth in stories, such height shall include each full story as defined therein.

Joists: A series of floor, roof or ceiling framing members spaced not more than 30 inches o.c. Members supporting roofs having slopes over 3 in 12 are not defined as roof joists. See Rafter.

Kitchen: Space, 40 sq. ft. or more in area, used for cooking and preparation of food.

Kitchenette: Space, less than 40 sq. ft. in area, used for cooking and preparation of food.

Living Unit: A dwelling or portion thereof, providing complete living facilities for one family, including permanent provisions for living, sleeping, eating, cooking and sanitation.

Loads:

Design: Total load which a structure is designed to sustain safely.

Dead: The weight of all permanent construction in a building.

Live: The weight of all moving and variable loads that may be placed on or in a building such as snow, wind, occupancy, etc.

Lot: A parcel of land that is described by reference to a recorded plat or by metes and bounds.

Corner Lot: A lot abutting upon two or more streets at their intersection.

Interior Lot: A lot bounded by a street on one side only.

Double-fronted Lot: An interior lot bounded by a street on front and back.

Lot Coverage: That percentage of the plot area covered by the building area.

Lot Line: A line bounding the lot as described in the title to the property.

Noncombustible: Material or a combination of materials which will not ignite or support combustion at a temperature of 1,200 degrees F. during a 5 minute exposure.

Party Wall: See Wall.

Plat: A map, plan or chart of a city, town, section or subdivision, indicating the location and boundaries of individual properties.

Plot: A parcel of land consisting of one or more lots or portions thereof, which is described by reference to a recorded plat or by metes and bounds.

Property: A lot or plot, including all buildings and improvements thereon.

Property Line: A recorded boundary of a plot.

Rafters: A series of roof framing members, spaced not more than 30 inches o.c. in roofs having slopes over 3 in 12. Members supporting roofs having slopes 3 in 12 or less are defined as roof joists.

Rehabilitation: The restoration of one or more dwellings to a satisfactorily improved physical condition, and which overcomes the deterioration of a property or properties, and aids in the improvement of its neighborhood.

Repair: To restore to a sound and acceptable state of operation, servcability or appearance. Repairs shall be expected to last approximately as long as would the replacement by new items.

Replace: To remove an existing item or portion of a system, and to construct or install a new item of similar or improved quality as the existing item when new. Replacement will ordinarily take place where the item is incapable of repair or where repair would be more costly.

Rooms:

Habitable Room: A space used for living, sleeping, eating or cooking, or combinations thereof, but not including bathrooms, toilet compartments, closets, halls, storage rooms, laundry and utility rooms, basement recreation rooms and similar spaces.

Combined Rooms: Two or more adjacent habitable spaces which by their relationship, planning and openness permit their common use.

Shaft: A vertical opening or enclosed space extending through two or more floors of a building, or through a floor and roof.

Shall: Indicates that which is required.

Should: Indicates that which is recommended but not mandatory.

Space Heater (room heater): A self-contained above-the-floor device for furnishing heated air, through openings in its casing, directly into the space in which the device is located or immediately adjacent to it. The device may be free-standing or recessed in a wall or partition.

Story: That portion of a building between a floor and the next floor above.

First Story (First floor): The lowermost story that has at least half its total floor area designed for and finished as living accommodations. For the purpose of determining this area, the area of halls, closets, and stairs is included. The area of storage, utility or heating rooms or spaces is not included. The location of the first story as defined herein is based upon the use of the space rather than on the location of entrance doors or the finished grade.

Half Story: A story finished as living accommodations located wholly or partly within the roof frame and having a floor area at least half as large as the story below. Space with less than 4 feet clear headroom shall not be considered as floor area.

Top Story: The story between the uppermost floor and the ceiling or roof above.

Street: A public or private way which affords principal means of vehicular access to properties which abut thereon.

Ventilation:

Mechanical: Supply and removal of air by power-driven devices.

Natural: Ventilation by openings to outside air through windows, doors or other openings.

Walls:

Bearing Wall: A wall which supports any vertical load in addition to its own weight.

Cavity Wall: A masonry or concrete wall consisting of two wythes arranged to provide an air space within the wall in which the inner and outer wythes of the wall are tied together with metal ties.

Curtain Wall: A wall, usually nonbearing, between piers or columns.

Faced Wall: A wall in which the masonry facing and the backing are so bonded as to exert a common reaction under load.

Firewall: A wall with qualities of fire resistance and structural stability which subdivides a building into fire areas, and which resists the spread of fire.

Foundation Wall: A wall, below or partly below grade, providing support for the exterior or other structural parts of a building.

Lot Line Wall: A wall adjoining and parallel to the lot line used primarily by the party upon whose lot the wall is located. Lot line walls may share common foundations.

Masonry Wall: A bearing or non-bearing wall of hollow or solid masonry units.

Non-bearing Wall: A wall which supports no vertical load other than its own weight.

Parapet Wall: That part of any wall entirely above the roof.

Party Wall: A wall used jointly by two parties under easement, erected upon a line separating two parcels of land, each of which is a separate real estate entity.

Veneered Wall: A wall with a masonry face which is attached to but not so bonded to the body of the wall as to exert a common reaction under load.

Vertical Opening: Openings through floors, such as for stairways, elevators, ventilating shafts, etc., which if unprotected, may serve as channels for the spread of fire or smoke.

Waterproofing: A treatment of a surface or structure, which prevents the passage of water. See Dampproofing.

Way: A street, alley or other thoroughfare or easement permanently established for passage of persons or vehicles.

Window, Required: A window which provides all or part of the required natural light and ventilation in the room or space where it is located.

Wythe: The partition between two chimney flues in the same stack. Also the inner or outer wall of a cavity wall.

Yard: The open, unoccupied space on the plot between the property line and the front, rear or side wall of the building.

Front Yard: The yard across the full width of the plot facing the street extending from the front line of the building to the front property line. On a corner lot, both yards facing a street are considered front yards.

Rear Yard: The yard across the full width of the plot opposite the front yard, extending from the rear line of a building to the rear property line.

Side Yard: The yard between the side line of a building and the adjacent side property line, extending from the front yard to the rear yard.

CHAPTER II

GENERAL ACCEPTABILITY CRITERIA

R200 GENERAL

These general acceptability criteria apply to all existing one through eleven living unit properties in the Mount Hope Project Area as set forth on page 2, Application.

R201 LOCAL CODES AND REGULATIONS

R201-1 The minimum standards set forth herein have been established to accomplish certain basic objectives for urban renewal rehabilitation purposes and shall not be construed as relieving the property owner or his builder of his responsibility for compliance with local ordinances, codes and regulations including established requirements of a health or other authority having jurisdiction.

R201-2

R201-3 Where other applicable codes, regulations or requirements permit lower standards than required herein, these Minimum Property Standards shall apply.

R202 SERVICE AND FACILITIES

R202-1 Utilities shall be independent for each property without dependence upon other properties.

R202-2 Independent facilities shall be provided for each living unit except that common facilities such as laundry and storage space or heating may be provided for each property.

R202-3 Each building and each living unit within the building shall contain provisions for each of the following:

- a. A continuing supply of safe potable water.
- b. Sanitary facilities and a safe method of sewage disposal.
- c. Heating adequate for healthful and comfortable living conditions.
- d. Domestic hot water.
- e. Electricity for lighting and for electrical equipment used in the dwelling.
- f. Provisions for the removal of trash and garbage and its sanitary storage pending removal.

R203 ACCESS

R203-1 Access to the Property

R203-1.1 Each property shall be provided with vehicular access to and from the property at all times by an abutting public or private street. Private streets shall be protected by a permanent easement.

R203-1.2 Properties having no vehicular access shall have permanent pedestrian access at least 5 ft. wide by easement or held in fee simple. Vehicular parking shall be permanently available nearby. Likewise, small groupings of properties not having direct vehicular access shall have convenient and permanently available parking bays. *

R203-2 Access to the Building

Walks and steps shall be provided for convenient all weather access to the structure constructed so as to provide safety, reasonable durability and economy of maintenance.

R203-3 Access to Each Living Unit

Access to each living unit shall be provided without passing through any other living unit.

R203-4 Access to Rear Yard

R203-4.1 Access to the rear yard from each living unit is recommended. However, such access is not acceptable where it is dependent upon passage through another living unit. *

R203-4.2 Each building shall be provided with access to the rear yard. This access for a detached dwelling should be directly from a street. For a row dwelling, the access shall be by means of an alley, easement, open passage through the dwelling, or other acceptable means. *

R204 TYPES OF DWELLINGS

R204-1 Types of dwellings are: Detached, semi-detached, row and end-row dwellings. Each type may contain one through eleven living units.

R204-2 A semi-detached, row or end-row dwelling shall be separated from an adjoining dwelling or dwellings by a party or lot line wall extending the full height of the building. See paragraphs R502-1 and R502-2.

R204-3 Method of Determining Number of Living Units

- R204-3.1 Each dwelling or portions thereof providing complete living facilities for one family shall be counted as a living unit. All living units shall comply with these Minimum Property Standards.
- R204-3.2 A room or group of rooms, containing complete living facilities, such as an apartment of a janitor, caretaker or servant shall be counted as a separate living unit.

R205 PARTIAL NON-RESIDENTIAL USE

R205-1 Any non-residential use of the property shall be subordinate to its residential use and character. For properties of one through four living units, the extent of this non-residential use should not exceed 25 percent of the total floor area.

R205-2 For one or two story structures in properties not exceeding four living units, where the percentage of total dwellings in the neighborhood having non-residential space included is small, and the use is considered harmonious and architecturally compatible, a higher percentage of non-residential space, (than provided in R205-1), may be permitted up to but not exceeding 50 percent of the total floor area. *

R205-3 For properties which include five or more living units, the maximum space devoted to non-residential use shall not exceed 20 percent of the gross floor area devoted to residential use. The gross floor area includes corridors, stairs, elevators, lobbies, etc. Laundry, garage space for tenants up to a ratio of one space per living unit, all storage for the residential and commercial tenants, or project storage and other service spaces are not considered in area computations.

R205-4 A property, any portion of which is designed or used for non-residential purposes shall be harmonious with the residential character of the neighborhood. (1)

(1) An inharmonious use is one which by its unresidential appearance, excessive noise or odor, lack of sanitation, or unwholesome influence on people adversely affects the neighborhood in which it is located.

R206

DILAPIDATED OR BLIGHTED STRUCTURES

All dilapidated portions of existing properties, or blighted structures, which are not economically repairable shall be removed. Also, see paragraph R407-1 for exterior appurtenances.

R207

VARIATIONS TO STANDARDS

R207-1

A variation to mandatory provisions contained herein may be permitted for specific cases, only when the variation attains the stated objectives contained herein and when one or more of the following conditions justify the variation:

- a. Topography of the site is such that full compliance is impossible or impracticable.
- b. Long established local practices and customs in the area assure continued market acceptance of the variation.
- c. Design and planning of the specific property offers improved or compensating features providing equivalent desirability and utility.

R207-2

Variations shall be limited to specific cases and shall not be repetitive in nature or establish precedents for similar acceptance in other cases.

CHAPTER III

SITE CRITERIA

R300 OBJECTIVE

The individual site under consideration shall be appropriate to the neighborhood in which it is located, and not have characteristics which will induce or perpetuate neighborhood blight or obsolescence.

R301 OPEN SPACE

Every dwelling shall have yard space of such size and so planned as to permit convenient access for maintenance, adequate light and ventilation of rooms and spaces, and reasonable privacy. There should be adequate open space for laundry drying, gardening, landscaping and outdoor living. The open space may be at the rear, front, or one of the side yard areas. *

R302 LOT COVERAGE

In general, the maximum area of the individual dwelling plot which should be covered by the building or buildings are as given below: *

a. Detached dwelling:

- (1) Interior lot coverage - 45 percent
- (2) Corner lot coverage - 50 percent

b. Semi-detached dwelling:

- (1) Interior lot coverage - 55 percent
- (2) Corner lot coverage - 60 percent

c. Row and end-row dwelling: 70 percent

The building area includes the total ground area of each building and accessory buildings but does not include the area of uncovered entrance platforms, terraces and steps.

R303

PARKING

As a neighborhood planning guide, facilities available for street and "on site" parking and garage storage in the neighborhood should total, in general, not less than a ratio of 1 car space per dwelling in single family house neighborhoods. Where it is contemplated that there will be more than one living unit per dwelling in a majority of the houses, the parking and garage ratio should be not less than .75 per living unit within the neighborhood. Street parking space may not be included in this calculation for the reason that overnight on-street parking is prohibited by law in Providence.

R304

YARDS AND COURTS

R304-1

Yards

Yard dimensions should generally provide for at least the following:

- a. Front yard, 10 feet.(1)
- b. Side yard, 5 feet.(1)
- c. Rear yard, 15 feet.

R304-2

Courts

- a. Outer courts should have a least dimension of 8 feet if windows of habitable rooms occur in walls opposite each other and serve separate living units or buildings.
- b. The distance between building walls of outer courts under other conditions should be not less than 5 feet.
- c. Inner courts should have at least 50 square feet area and minimum dimensions as for outer courts.
- d. Covered light shafts, or open shafts less than 50 square feet area, are not acceptable as providing ventilation to bedrooms or living rooms.

(1) Where the Providence zoning ordinance permits less yard dimension than is recommended here, it may be considered acceptable for existing houses, but not for new construction.

R305 SITE IMPROVEMENTS

R305-1 The open space of each property shall provide (a) for the immediate diversion of water away from buildings and disposal from the lot, (b) prevent soil saturation detrimental to structures and lot use, and (c) where needed, appropriate paved walks, parking areas, driveways, exterior steps and landscaping.

R305-2 Any new site improvements installed should comply with Chapter XIII of the MPS for One and Two Living Units, or Chapter X of the MPR for Multifamily Housing, as feasible. *

CHAPTER IV

BUILDING PLANNING

R400 OBJECTIVE

To assure a living unit which provides for a healthful environment and complete living facilities arranged and equipped to assure suitable and desirable living conditions commensurate with the type and quality of the property under consideration.

R401 SPACE STANDARDS

R401-1 Objective

To provide each living unit with space necessary to provide suitable living, sleeping, cooking and dining accommodations, storage, laundry and sanitary facilities; also, to provide space of such size and dimensions so as to permit placement of furniture and essential equipment.

R401-2 General

R401-2.1 For existing work, dimensions for interior spaces are based upon measurements taken between finished floor, wall, ceiling or partition surfaces.

R401-2.2 The area occupied by a stair or by closets shall not be included in the determination of required room area.

R401-2.3 Habitable rooms in basements or below grade intended for year-round occupancy shall comply with building planning standards in the same manner as rooms above grade. See R402

R401-3 Minimum Room Sizes and Allowable Room Count

Room sizes shown below shall be the minimum permitted for any subdividing of existing spaces, or for the construction of any new rooms. Unremodeled existing rooms, where considered adequate in size and arrangement for the intended function by the local insuring office, may be acceptable if not more than 10 percent smaller than the minimums given in the following schedule. Room count is applicable only for properties having five, and in some cases eight, or more living units under FHA multifamily housing programs.

*

SCHEDULE

Name of Space (1)	Room Count	Minimum Area (sq. ft.) (2)		Least Dimension (3)
		1 & 2 BR LU	3 or more BR LU	
LR	1	140	150	10'-0"
DR	1	80	100	7'-8"
K	1	50	60	3'-0" (4)
K'ette (5)	1/2	40	NP	3'-4
BR	1	70	70	7'-0"
Total BR	---	1BR, 100 2BR, 170	3BR, 240 4BR, 340	(1st BR of each LU=8'-0"
OHR (6)	1	70	70	7'-0"
LR-DA	1-1/2	160	180	(9)
LR-DR	2	200	220	(9)
LR-DA-K (7)	2	210	240	(9)
K-DA (7)	1-1/2	80	100	(9)
K-DR (7)	2	120	140	(9)
K'ette-DA (7)	1	60	80	(9)
LR-DA-BR (8)	2	220	---	(9)
LR-BR (8)	1-1/2	190	---	(9)

NOTES

(1) Abbreviations

LU = Living Unit
 LR = Living Room
 DR = Dining Room
 DA = Dining Area
 K = Kitchen

K'ette = Kitchenette
 BR = Bedroom
 OHR = Other Habitable Room
 NP = Not Permitted

- (2) Minor variations to these areas may be permitted when existing partitions preclude compliance.
- (3) Least dimensions shown shall apply for 90 percent of the required room area. Minor variations to these dimensions may be permitted when existing partitions preclude compliance.
- (4) Clear passage space.
- (5) Permitted in LU of 0-BR or 1 BR only. Where the area of Kitchenette is less than 40 sq. ft., no room count shall be allowed, and no Kitchenette shall be less than 20 sq. ft.
- (6) An Other Habitable Room (OHR) shall meet all requirements for habitable rooms, have a closet of approximately 6 sq. ft., and shall have a means of complete separation from other rooms. Only one OHR is allowable for room count purposes, per living unit.

- (7) The combining of a Kitchen or Kitchenette with a Bedroom in a single room shall not be permitted. The designation of K in combination with other spaces may be considered either as a Kitchen or Kitchenette.
- (8) Permitted only in Living Unit having no separate Bedroom.
- (9) Least dimension of appropriate room function applies.

R401-4 Ceiling Heights *

The ceiling heights for habitable rooms, bathrooms and halls should be as follows:

R401-4.1 Habitable Rooms

- a. Average height for required room, 7 ft.-6 in.
- b. Floor area with less than 4 ft. clear headroom not to be included in required room area.

R401-4.2 Bathrooms, toilet compartments, utility rooms, etc., 6 ft.-8 in. clear.

R401-4.3 Halls, 6 ft.-8 in. clear.

R401-5 Privacy and Arrangement

R401-5.1 A degree of privacy shall be provided commensurate with suitable living conditions by means of the proper location of exterior openings to exterior conditions, and by the interior arrangement of rooms, particularly with reference to access to bathrooms from bedrooms.

R401-5.2 Access to all parts of a living unit shall be possible without passing through a public hall.

R401-5.3 Every water closet, bathtub or shower of a living unit shall be installed in a bathroom or toilet compartment which will afford privacy to the occupant.

R401-5.4 A bathroom location is not acceptable if it is used as a passageway to a habitable room, hall, basement or to the exterior. Also, the only access to a single bathroom is not acceptable through a bedroom in living units having more than one bedroom.

R401-5.5 A bathroom should not be separated from all bedrooms of a living unit by locating it a full story above or below the bedrooms. *

R401-5.6 A bedroom shall not be used as the only means of access to another bedroom or habitable room.

R401-6 Kitchen Facilities

R401-6.1 Each living unit shall have a specific kitchen space, which contains a sink with counter work space and having hot and cold running water, and adequate space for installing cooking and refrigeration equipment, and for the storage of cooking utensils.

R401-6.2 Minimum areas and dimensions of kitchen storage space should generally be as follows: *

- a. Total shelving in wall and base cabinets - 30 sq. ft.
- b. Drawer area - 5 sq. ft.
- c. Usable storage shelving in cooking range or under sink may be counted in the total shelving needed.

R401-7 Bath Facilities

Complete bathing and sanitary facilities shall be provided within each living unit consisting of a water-closet, a tub or shower, and a lavatory. Provide an adequate supply of hot water to the tub or shower stall and lavatory, and cold water to all fixtures. Arrangement of fixtures shall provide for the comfortable use of each fixture and permit at least a 90° door swing. Wall space shall be available for a mirror or medicine cabinet and for towel bars. Bathtub shall be not less than 4 ft. 6 in. long, and if a spare tub - 4 ft. minimum. Shower, if provided, should have a least dimension not less than 30 inches *

R401-8 Space for Laundry Facilities

Provide adequate space for laundry trays or equipment in either of the following locations:

- a. Within each living unit having two or more bedrooms, and located in the kitchen or other suitable service space, or
- b. In basement, cellar or other suitable public space within the building for the use of all occupants.

R401-9 Closets

R401-9.1 Clothes closet space shall be provided within each living unit on the basis of approximately 6 sq. ft. for each BR. *
The space provided should be, if possible, divided into separate closets serving each bedroom and having one closet located so as to open directly off a hall or living or dining room. None of the minimum clothes closet space shall be located within the kitchen. A guest closet (min. 6 ft.) should be provided

R401-9.2 Where separate closets for each existing bedroom are not possible, a closet elsewhere within the living unit may be acceptable provided the minimum area is obtained and is reasonably accessible to the bedroom. *

R401-9.3 Clothes closets shall have a shelf and rod.

R401-9.4 Within each living unit, total shelf area or built-in drawer space of at least 8 sq. ft. should be provided for linens. This space should be appropriately increased for living units having 3 or 4 bedrooms. *

R401-10 General Storage

Each living unit shall have a designated closet or other suitable space within the unit or locked space elsewhere within the building or other structure on the property, conveniently accessible, for general storage. The minimum volume of general storage space for each living unit shall be 100 cu. ft. and should be appropriately increased for 3 or 4 bedroom living units. *

R402 LIGHT AND VENTILATION

R402-1 Objective

To provide a healthful environment and an acceptable degree of comfort within all rooms and hallways of the dwelling, by having sufficient light and ventilation, and by the provision of natural ventilation of structural spaces to minimize conditions conducive to decay and deterioration.

R402-2 Habitable Rooms

R402-2.1 All habitable rooms, except kitchens, shall have natural light, provided by means of windows, glazed doors, or skylights. A glass area of at least 10 percent of the floor area shall be provided for new or remodeled rooms, or other spaces. Existing rooms not disturbed in the rehabilitation shall have a glass area not appreciably below a total of 10 percent of the floor area. For half stories, the above percentages are 5 percent.

R402-2.2 An acceptable means of natural ventilation shall exist or be provided for all habitable spaces, except that for kitchens a mechanical ventilation system may be substituted. A ventilation area of 4 percent of the floor area of the space shall be provided. For half stories the above percentage is 2 percent.

R402-2.3 Artificial light shall be provided and so distributed as to assure healthful and sanitary conditions in all rooms or spaces. See R906, Chapter IX.

R402-2.4 An interior room not having its own source of natural light and ventilation is acceptable only where the room is adjacent to an outside room which has adequate natural light and ventilation, calculated on the basis of the combined floor area of the two rooms, and where the separating wall between the two rooms has a clear horizontal opening approximately 6 feet wide. The interior room shall not be a bedroom.

R402-2.5 See R304-2 for minimum court dimensions.

R402-3 Kitchens

R402-3.1 Artificial light shall be provided, and distributed so as to give effective illumination throughout.

R402-3.2 Ventilation shall be provided by natural means in amounts as calculated for habitable rooms and not less than 3 sq. ft., or by mechanical ventilation in accordance with paragraphs R901-2 and R902, Chapter IX. Where a Kitchen is not separated from the Living Room by partitions and door or permanent screen, provide mechanical ventilation for the Kitchen.

R402-4 Bathrooms and Toilet Compartments

R402-4.1 Artificial light shall be provided.

R402-4.2 Ventilation shall be provided by natural means in amounts as calculated for habitable rooms and not less than 1 1/2 sq. ft., or by mechanical ventilation in accordance with paragraphs R901-2 and R902, or by gravity-type ventilation equipped with a wind-driven roof ventilator above the roof level.

R402-5 Public Spaces

R402-5.1 General

Adequate artificial light shall be provided for all public spaces.

R402-5.2 Public Entrance Spaces to Building

a. All public entrance space should have natural light provided by window, doorway or equivalent glass area of at least 5 percent of the floor area. *

b. Either natural ventilation of at least 4 percent of floor area or mechanical ventilation shall be provided. *

R402-5.3 Public Hallways and Stairways

- a. Public hallways and unenclosed stairways shall be provided with either natural ventilation (at least 4 percent of floor area) or mechanical ventilation.
- b. Where dependence is placed upon natural light for daytime use of hallways or unenclosed stairways, windows, skylights or the equivalent shall be provided containing at least 5 sq. ft. of glass area, or its equivalent, for each floor so served.
- c. Enclosed stairways shall be ventilated by a mechanical or gravity system to provide approximately 4 air changes per hour.

R402-6 Habitable Rooms of Living Units Below Grade

For habitable rooms below grade, the depth of the finish floor below its adjacent outside grade level shall not exceed 4 ft.-0 in. Natural light and ventilation standards for habitable rooms above grade shall apply.

R402-7 Ventilation of Utility Spaces

Utility spaces which contain heat producing, air conditioning and other equipment shall be ventilated to the outer air, and air from such spaces shall not be recirculated to other parts of the building.

R402-8 Ventilation of Structural Spaces

R402-8.1 Natural ventilation of spaces such as attics and enclosed basementless spaces shall be provided by openings of sufficient size to overcome dampness and minimize the effect of conditions conducive to decay and deterioration of the structure, and to prevent excessive heat in attics.

R402-8.2 All exterior ventilation openings shall be effectively and appropriately screened.

R403 DOORS AND ACCESS OPENINGS

R403-1 Objective

To provide openings adequate in size to admit furniture and equipment to all spaces and to permit inspection for repair and maintenance.

R403-2 Exterior Doors

R403-2.1 Existing doors in sound condition and to remain should approximate in size the following, and the minimum size of new doors installed in new openings shall be: *

	<u>Width</u>	<u>Height</u>
a. Main entrance door	3'-0"	6'-6"
b. Service doors	2'-6"	6'-6"
c. Garage doors, 1 car	8'-0"	6'-4" clear opening
d. Garage doors, 2 cars	12'-0"	6'-4" clear opening

(i) Where serving 5 or more Living Units = 3'-4" min.

R403-2.2 Where new doors are installed in acceptable existing door openings, the doors should approximate the sizes given above. *

R403-2.3 Exterior doors shall have safe locks.

R403-3 Interior Doors

R403-3.1 Provide a door for each opening to a bedroom, bathroom or toilet compartment. Doors to bathrooms and toilet compartments shall be hinged or sliding and shall have locks.

R403-3.2 Existing doors in sound condition and to remain should approximate in size the following, and minimum size of new doors installed in new openings shall be: *

- a. Habitable rooms, 2 ft.-6 in. wide.
- b. Bathrooms, toilet compartments and closets other than linen and broom, 2 ft.-0 in. wide.
- c. Service stair doors, 2 ft.-6 in. wide.
- d. Cased openings, 2 ft.-6 in. wide.
- e. To public stairway enclosures, single door = 3 ft.- 0 in. wide; double door = 2 ft.-4 in. wide.
- f. Height of all interior doors, 6 ft.-6 in.

R403-3.3 Where new doors are installed in acceptable existing openings, the doors should approximate the sizes given above. *

R403-4 Attic and Basement Spaces

Access to attics shall be provided by means of conveniently located scuttles, disappearing or permanently installed stairway. For attic and basementless spaces, the minimum access opening shall be 14 x 22 inches. However, if either are to contain mechanical equipment, the access opening shall be of sufficient size to permit the removal and replacement of the equipment, if any.

R404 STAIRWAYS

R404-1 Objective

To assure that all stairways provide safety of ascent and descent, and an arrangement of stairs and landings which have adequate headroom and space for the passage of furniture and equipment.

R404-2 Reference shall be made in all stairway planning to provisions given in Chapter V of this MPS. Likewise, provisions given on interior and exterior stairway planning in Section 607, Chapter VI, of MPS for One and Two Living Units, FEA No. 300, shall be used as a reference in the following ways:

- a. Existing stairways in sound condition to remain, or to be repaired, shall not be dangerously or to any serious extent below minimum standards as to rise and run of steps, headroom, obstructions, stair width, landings, or railing protection.
- b. New stairways to be constructed shall comply with the provisions of the MPS referenced just above.
- c. Winder-type steps should not be used in stairways of dwellings where more than one family use the stairway, unless a separate means of egress for each living unit is provided, which is not a secondary exit. *

R405 HALLWAYS

R405-1 General

Hallways shall provide adequate, safe and unobstructed circulation from living units or other spaces to various means of exit.

R405-2 Distance of Travel

Where a required stairway is not enclosed and is open to a hallway, the maximum distance of travel from the entrance door of any living unit to the stairway should not exceed 20 ft. *
Where the stairway is enclosed, this distance should not exceed 30 ft. *

R405-3 Width

Hallways providing access to stairways and serving more than one family should be not less than 3 ft.-6 in. wide. *

R406 ELEVATORS

R406-1 Where provided, an elevator shall furnish convenient and safe ascent and descent to all living units and service areas. The character and type of elevator service and equipment should be appropriate to the building being rehabilitated and to its occupants. *

R406-2 The provision of an elevator is recommended for buildings having four stories above grade level and containing more than two living units per floor. Where a building has five or more stories above grade and contains two or more living units per floor, an elevator shall be provided. *

R406-3 See Chapter V, R501-7 and R502-4.1 for related provisions.

R407 EXTERIOR APPURTENANCES

R407-1 All exterior appurtenances or accessory structures which serve no useful purpose, or those in a deteriorated condition which are not economically repairable, shall be removed. Such structures include porches, terraces, entrance platforms, garages, carports, walls, fences, miscellaneous sheds. Where a structure is needed for utility or privacy and the existing one requires removal, it should be replaced with a structure that appropriately serves the dwelling. *

R407-2 Reference to Section 610 and 611, Chapter VI of the MPS for One and Two Living Units shall be made for planning requirements for new accessory structures.

CHAPTER V

FIRE PROTECTION

R500 OBJECTIVE

To assure a high degree of safety to life and property preservation for the dwelling, by the separation of living units and the use of materials which will retard the spread of fire and prevent the passage of flame, smoke and hot gases through open or concealed spaces within the building, and by providing exits which will permit persons to leave the building with safety.

R501 EXITS

R501-1 Each one or two family dwelling and each living unit in multifamily properties shall have at least one exit, which is a doorway, protected passageway or stairway, providing unobstructed travel directly to the outside of the building at street or grade level. In addition, there shall be a suitable and separate secondary exit from each living unit by means of a doorway, stairway, protected passageway, or openable window. In buildings three or more stories above grade, the secondary exit from the third story, or from any additional stories, shall be by stairway, fire escape or horizontal passageway providing a safe path of escape in case of emergency.

R501-2 Access to either required exit shall not necessitate passage through another living unit, nor shall either exit be subject to locking by any device which would impede or prohibit ready egress.

R501-3

R501-4

R501-5 Where the secondary exit is by means of an openable window, the opening shall be at least 5 sq. ft. in area with a minimum dimension of 20 inches. The bottom of the opening, or sill height, shall not be more than 3 ft. 6 in. above the floor. Where storm windows, screens or burglar guards are used, these shall be readily openable from the inside.

R501-6 Every below grade living unit shall have direct and convenient access to the outside of the building at grade level.

R501-7 Elevators shall not be considered a required means of egress.

R502-1 Party or Lot Line Walls

Party or lot line walls shall extend the full height of the building from foundation to or through the roof, without openings. The wall shall effectively prevent the passage of fire at all floor-ceiling intersections with the wall. If of combustible construction, the wall shall have horizontal fire stopping located approximately midway between each floor and ceiling. The fire resistance rating of the wall, where it is new construction in connection with present rehabilitation shall be not less than 2-hours.(1) Existing walls shall have a fire resistance rating of not less than the following:

- a. 3/4-hr., where one or more party walls separate two, but not more than six, residential buildings having a combined total of not more than 12 living units, all of which are located between party, lot line or exterior walls of noncombustible materials having not less than a 2-hr. fire resistance rating;
- b. 2-hr., where a party wall separates two multifamily buildings either of which contains more than eight living units, or where the total living units contained in both buildings exceed twelve.
- c. 2-hr., where the residential building adjoins a non-residential building or property.

R502-2 Walls, Floor, and Ceiling Construction

- R502-2.1 Existing wall, floor and ceiling construction separating living units or separating a living unit from a public hallway, other than party or lot line walls, should be constructed so that at least 3/4-hr. fire resistance rating is provided. *
- R502-2.2 Where such existing construction is to be disturbed by new openings or stripped down, and where new walls, floors or ceilings are planned, the fire resistance rating shall be not less than 3/4-hr.
- R502-2.3 The underside of all flights of wood stairs to remain, if exposed, shall be covered with a noncombustible material. Existing plaster in this location which is in good condition may remain.

(1) Fire resistance ratings shall be in accordance with Standard Designation E119-61 of the American Society for Testing Materials. This test method is also NFPA Standard No. 251, and Underwriters' Laboratories No. UL 263.

R502-3 Interior Fire Protection - Materials

R502-3.1 Interior finish materials of walls, partitions (either fixed or movable), ceilings and other exposed interior surfaces, such as acoustic or fixed decorative treatment, and interior trim materials shall be appropriate to the location and conditions of service and not aid the surface flame spread, nor in burning give off excessive amounts of smoke or objectionable gases.

R502-4 Enclosure of Vertical Openings

R502-4.1 The enclosing walls of an elevator shaft shall be of noncombustible materials having not less than a 2-hr. fire resistance rating. Other vertical openings requiring enclosure shall be of materials and fire resistance rating appropriate to provide adequate fire safety.

R502-4.2 For properties containing more than four living units, stairways from the first floor, leading to below-grade open space or rooms containing heating equipment shall be enclosed with partitions providing at least a 1-hour fire resistance rating. This enclosure shall include all space beneath the stair. A self-closing door shall be provided at the bottom of the stairway conforming to Underwriters' Laboratories, Inc., Class C classification.

R502-5 Storage Space

Storage space located on the same floor as the house heater shall be at least 18 ft. away from the heater, or if closer, shall be separated from it by a noncombustible floor to ceiling partition.

R503 EXTERIOR FIRE PROTECTION

R503-1 Distance Separation

An existing residence less than 6 ft. distance from an adjoining building where the exterior walls of both have a combustible finish material should have a noncombustible exterior finish material added, to the wall so located, or replace the existing exterior wall finish with noncombustible materials. *

R503-2 Exterior Stairways

R503-2.1 An exterior stairway conforming to the design requirements of interior stairways may be acceptable as a required exit. See R404.

R503-2.2 Where an exterior stairway is used in place of a required interior stairway, or with buildings three or more stories above grade, it shall be self-supporting and constructed of noncombustible materials.

R503-3 Roof Covering

R503-3.1 Buildings of from One through Four Living Units

Existing roof coverings or new roof coverings contemplated shall provide a fire retardance equivalent to a Class-C roof according to the classification given by the Underwriters' Laboratories, Inc.

R503-3.2 Buildings of more than Four Living Units

Existing roof coverings or new roof coverings contemplated shall provide a fire retardance equivalent to a Class-C roof according to classification of U. L. except for the following additional provision. Where the roof area of the property is greater than 4000 sq. ft., or is without separation from adjacent properties by an adequate distance or by a continuous parapet wall, the requirements of Class A or Class B roofing of U. L. shall apply.

FIRE PROTECTION EQUIPMENT

In four or more story combustible structures, accommodating four or more families, an approved fire alarm system shall be provided of either a manual or automatic type. Where codes require fire protection equipment, it shall be provided in accordance with NFPA Standard No. 74M, and installed in conformity with NFPA Standard No. 72 and the National Electrical Code.

CHAPTER VI

MATERIALS AND PRODUCTS

R600 OBJECTIVE

To provide materials of such kind and quality which will assure that the dwelling will provide: (a) appropriate structural strength, (b) adequate resistance to weather and moisture, and (c) reasonable durability and economy of maintenance.

R601 STANDARDS FOR MATERIALS AND PRODUCTS

For specific requirements of new materials and products used as replacements or additions to dwellings being rehabilitated, reference shall be made to Chapter VII, MPS for One and Two Living Units, FHA No. 300.

CHAPTER VII

CONSTRUCTION

R700 OBJECTIVE

To assure that the construction of the dwelling will provide: (a) sufficient structural strength and rigidity, (b) adequate protection from corrosion, decay, insects and other destructive forces, (c) necessary resistance to the elements, (d) reasonable durability and economy of maintenance, and (e) acceptable quality of workmanship.

R701 STRUCTURAL SOUNDNESS

All structural components of the dwelling shall be in sound condition and considered serviceable for the expected useful life of the rehabilitated building. Sagging of floors, fireplaces, partitions or stairs, and bulging of exterior walls shall be restored as near as practical to an acceptably level or plumb position; and supported or braced so as to prevent a reoccurrence of these conditions. Stair railings shall be rigid. Individual structural members in a seriously deteriorated condition shall be replaced. Loose jointing of structural members shall be restored to original rigidity.

R701-1 All new construction work shall comply with MPS for One and Two Living Units, FHA No. 300, as feasible.

R702 EXTERIOR WALLS

R702-1 General

Exterior walls shall provide safe and adequate support for all loads upon them. Serious defects shall be repaired and cracks effectively sealed.

R702-2 Masonry Walls

Masonry walls, either solid or veneer, shall prevent the entrance of water or excessive moisture.

R702-3 Basement and Foundation Walls

R702-3.1 Exterior basement and foundation walls shall prevent the entrance of water or moisture into a basement or crawl space area. Cracks in the walls shall be effectively sealed, and loose or defective mortar joints shall be replaced. Where necessary, the interior or exterior face of the walls shall be dampproofed by bituminous coating and cement parging.

R702-3.2 Any deficiencies in proper grading or paving adjacent to the building shall be corrected, to assure surface drainage away from basement walls.

R703 FLOOR CONSTRUCTION

R703-1 General

All floor construction components shall provide safe and adequate support for all intended or likely loads and shall eliminate objectionable vibration.

R703-2 Basement or Cellar Floors

The floor of all basement or cellar furnace rooms, or basements containing habitable space, shall be paved in an acceptable manner, except under the following condition. Where the basement or cellar has existing wood floor construction and it is in a structurally sound condition, it may remain.

R704 CHIMNEYS AND VENTS

Chimneys and vents shall be structurally safe, durable, smoke-tight and capable of withstanding the action of flue gases.

R705 PROTECTION FROM RODENTS, TERMITES OR OTHER INFESTATION

Each dwelling and all exterior appurtenances on the premises shall be adequately protected against rodents, termites or other vermin infestation. An existing building where found to have defects which will permit the entrance into the structure of rodents, termites or other vermin shall be corrected by appropriate preventive measures.

R705-1 Inspection

A careful inspection shall be made of the dwelling and other structures on each property for evidence of actual or potential infestation.

R705-2 Preventive Measures

The following preventive and protective measures should be taken where necessary against the several forms of infestation: *

- a. Windows or other openings near grade to have snug-fitting screens;
- b. Exterior doors to fit tightly and be flashed at sill;
- c. Openings of pipes or ducts through floors or walls to have tight fitting collars;
- d. Cracks and crevices in foundations and above ground walls effectively sealed by pointing with mortar, and holes filled with materials appropriate to adjacent work;
- e. Provision of curtain wall below grade and supplementary to the foundations;
- f. Locating sidewalks, driveways or other impervious horizontal surfaces flush against the foundation;
- g. Cracked or broken shingles or decayed wood surfaces shall be replaced and joints caulked;
- h. Appropriate soil poisoning treatment adjacent to foundations and within hollow masonry foundations, and treatment of soil in enclosed spaces.
- i. Apply the precautions or corrective actions recommended by bonded exterminators.

CHAPTER VIII

EXTERIOR AND INTERIOR FINISHES

R800 OBJECTIVE

The use of exterior and interior finishes of the dwelling that will assure against the entrance or penetration of moisture and extremes of temperature; protect from damage by decay, corrosion, insects and other destructive elements; and provide reasonable durability and economy of maintenance.

R801 GENERAL

All new work shall comply with MPS for One and Two Living Units, FHA No. 300, as feasible.

R802 EXTERIOR WALLS

Repairs to existing siding, stucco, or other exterior wall finish method should use standards for new work as a guide.

R803 ROOF COVERING

All roofs shall have a suitable covering free of holes, cracks or excessively worn surfaces which will prevent the entrance of moisture into the structure and provide reasonable durability. See R503-3.

R804 GUTTERS AND DOWNSPOUTS

Each dwelling shall have a controlled method of disposal of water from roofs where necessary to prevent damage to the property, and avoid causing an unsightly appearance of walls and windows where adequate roof overhangs are not provided.

R805

FLASHING

All critical joints in exterior roof and wall construction shall be protected by sheet metal or other suitable flashing material to prevent the entrance of water.

R806

WINDOWS, DOORS AND OTHER OPENINGS

R806-1

Existing windows and doors, including its hardware, shall operate satisfactorily and give evidence of continuing acceptable service. Trim and the sash or door needing restoration should be guided by the following:

1. Repair, if work can be done in place;
2. Replace, if the entire component needs to be removed in order to restore;
3. Refinish, if only the surface needs work in order to restore to new condition.

R806-2

Screens should be provided for all windows, doors and other openings. *

R806-3

Existing screens, and storm sash, where provided, shall be in suitable condition to serve the intended purposes.

R807

INTERIOR WALL AND CEILING FINISH

All interior walls and ceilings of rooms and hallways shall provide (a) a suitable base for decorative finish, (b) a waterproof and hard surface in spaces subject to moisture, and (c) there shall not be noticeable surface irregularities or cracking. See paragraph R502-3 for additional consideration.

R808

FINISH FLOORS

R808-1

General

Finish floors shall be appropriate for the use of the space and provide reasonable durability and economy of maintenance.

R808-2 Kitchen and Bathroom Floors

Floors in kitchens and bathrooms should be of a durable, water-proof, non-absorptive material, such as asphalt, vinyl-asbestos, vinyl-plastic, rubber or ceramic tiles, terrazzo or linoleum. Wood finish flooring for these rooms is not acceptable. *

R808-3 Habitable Rooms (other than Kitchen)

Finish floors in habitable rooms should be wood flooring or a resilient tile or sheet material. Concrete as a finish floor should not be used. Carpeting over a suitable underlayment is also acceptable. *

R808-4 Public Hallways and Entrance Spaces

R808-4.1 In hallways, wood, a resilient flooring or carpeting are appropriate finish flooring materials. Noise control should be considered in making selection. *

R808-4.2 In public entrance spaces, ceramic tile, terrazzo or concrete are appropriate, in addition to floorings named under R808-4.1. A finish flooring that is resistant to water and dirt should be given special consideration in these locations. *

R808-4.3 Carpeting of stairways is not recommended. *

R809 PAINTING AND DECORATION

R809-1 Where needed, a protective and decorative finish coating shall provide, (a) adequate resistance to weathering, (b) protection of finish surfaces from moisture or corrosion, (c) an attractive appearance, and (d) reasonable durability.

R809-2 Where painted surfaces are in good condition and it is apparent that painting maintenance has taken place and the property is between such painting periods, and where the rehabilitation will not disturb that part of the building, painting and redecoration is not required.

R809-3 Appropriate cleaning of existing interior and exterior finish surfaces should be provided regardless of whether or not painting or other decoration work is done. *

CHAPTER IX

MECHANICAL EQUIPMENT

R900

OBJECTIVE

To provide mechanical equipment for the building and its living units that will appropriately meet the needs of the intended occupants and be of a quality and condition which will assure: (a) safety of operation, (b) adequate capacity for its intended use, (c) protection from moisture, corrosion or other destructive elements, (d) reasonable quietness of operation, and (e) reasonable durability and economy of maintenance.

R901

GENERAL

R901-1

See R202 Service and Facilities, for mechanical equipment. Also see R402-7 Ventilation of Utility Spaces.

R901-2

Provisions relating to mechanical equipment and wiring given in Chapter X of the MPS for One and Two Living Units, or Chapter IX of the MPS for Multifamily Housing, should be used as a guide in making determinations as to the suitability of existing equipment for continued use in the rehabilitated structure. *

R902

MECHANICAL VENTILATION AND AIR CONDITIONING

R902-1

Where mechanical ventilation is required for Kitchens, Bathrooms or Toilet Compartments, the installation of new equipment shall be in accordance with paragraph 1002 of the MPS for One and Two Living Units, FHA No. 300.

R902-2

Exhaust air should not be circulated from one living unit to another, except where the air circulation system is already installed, and where it is considered this system will cause no adverse effect on the marketability of the property. *

R902-3

Where summer air conditioning is to be included, whether a central system or packaged room or zonal air conditioners, follow the provisions of Section 1004, MPS for One and Two Living Units.

R903 HEATING

- R903-1 Each property shall be provided with a centralized heating facility, or appropriate and sufficient individual space heaters, capable of maintaining a temperature of at least 70 degrees F. when the outside temperature is 0° F. in all habitable rooms, bath and toilet rooms and hallways, within a living unit. All heating devices or equipment shall have an appropriate recognized approval for safety and performance, or shall be so determined by proper authority.
- R903-2 No open-flame radiant type space heaters shall be permitted.
- R903-3 Unvented, fuel burning, space heaters shall not be permitted.
- R903-4 Appropriate clearance around all room or space heaters shall be provided, and the floor shall be protected in an acceptable manner.(1)
- R903-5 Where space heaters are the sole source of heat, a sufficient number of heaters shall be provided to accomplish the objective. As a guide, the maximum distance between the space heater and the center of any room to be heated should not exceed 18 feet, or through not more than one intervening door.

(1) For gas - NFPA Standard No. 54, 54A; for oil - Commercial Standard 101; for coal fired - Temporary Commercial Standard 3443.

R904

DOMESTIC WATER HEATING AND STORAGE

R904-1

Capacities

Each building, or living unit within a building, shall have domestic water heating and storage equipment in serviceable condition supplying hot water in quantities equivalent to the table below:

Number Living Units Served	Storage Capacity In Gallons	Heating Capacity Gal. per hr. 100° F. Rise
1	20	20
2	30	30
3	40	35
4	50	40
5	60	45
6	70	50
7	80	55
8	90	65
9	100	70
10	110	80
11	120	95

Where replacement by new equipment is needed, the water heating equipment should be automatic. Where electric water heaters are used, appropriate additional storage capacity shall be provided to compensate for low heating capacity. *

R904-2

Capacities - Tankless Type

Instantaneous water heaters rated in gallons per minute - 100° F. Rise shall be at least equivalent to the following:

1	Living Unit served	- 2.75 G.P.M.
2	" " "	- 5.00 G.P.M.
3	" " "	- 7.75 G.P.M.
4	" " "	- 10.00 G.P.M.
5	" " "	- 12.75 G.P.M.
6	" " "	- 15.00 G.P.M.
7	" " "	- 17.75 G.P.M.
8	" " "	- 20.00 G.P.M.
9	" " "	- 22.75 G.P.M.
10	" " "	- 25.00 G.P.M.
11	" " "	- 27.75 G.P.M.

R904-3 Prohibited Locations

No water heater shall be installed in any room used or designed to be used for sleeping purposes. No gas or oil fired water heater shall be located in a bathroom, clothes closet, under any stairway, or in a confined space with access only to the above locations.

R904-4 Venting

All fuel burning water heaters shall be connected to a vent leading to the exterior.

R905 PLUMBING

R905-1 General

The plumbing system and its appurtenances for each dwelling shall provide satisfactory water supply, drainage, venting and operation of fixtures.

R905-2 Required Fixtures

For required plumbing fixtures see paragraphs R401-6 to R401-8, Chapter IV.

R905-3 New Plumbing Work

Where changes or additions are made to existing plumbing, the provisions of Section 1006, MPS for One and Two Living Units shall be used as a guide.

R905-4 Condition of Existing Plumbing

Plumbing systems including building sewers shall operate free of fouling and clogging, and not have cross connections which permit contamination of water supply piping or back-siphonage between fixtures.

R906 ELECTRICAL

R906-1 General

All habitable rooms and other appropriate spaces in each dwelling shall be provided with electric service by a system of wiring and equipment to safely supply electrical energy for proper illumination, and for the appropriate location and use of appliances or other equipment.

R906-2 Existing Wiring and Equipment

Existing wiring and electrical equipment to remain shall be determined to be in good and serviceable condition, and installed so as not to be a potential source of electrical hazard, or ignition of combustible materials. Replacement of existing wiring and equipment shall be made where these conditions are not fulfilled. Existing electrical facilities where considered inadequate shall be increased to fulfill the intent of paragraph R906-1.

R906-3 New Electrical Work

The provisions of Section 1007, Chapter X, of the MPS for One and Two Living Units, Section M907 of the MPR for Multi-family Housing, and appropriate provisions of the National Electrical Code shall be used as a guide for design layout and installation of electrical work in new construction. Not less than two general lighting circuits (15 amp.) and one appliance circuit (20 amp.) shall be provided for each living unit. Heavy duty equipment shall have individual branch circuits, as required to comply with the National Electrical Code.
