March, 1966

To All Rhode Island City and Town Councils:

One of your many and varied responsibilities is that of Dutch Elm Disease Control within your community. In most Rhode Island cities and town, this has been a rather cut and dried procedure until very recently when a great deal of new information about pesticides, DDT in particular, has indicated that Dutch Elm spraying may well be doing long-term and serious damage to certain important wildlife populations within your community.

There are very reasonable and sensible alternatives to the treatment which has been established in the past. The enclosed pamphlet will outline these new approaches to you. Please note that the pamphlet has been prepared and distributed as a cooperative venture between a private conservation organization and the Massachusetts Department of Natural Resources. While the pamphlet was designed principally for use in Massachusetts, it applies equally well in Rhode Island.

A principal recommendation of this pamphlet is a change from the use of DDT to an equally effective pesticide known as Methoxychlor. While Methoxychlor is slightly more expensive than DDT, it is far less damaging to many forms of animal life which are not intentional targets of your spray program. The cost of the pesticide itself is a relatively small per cent of most Dutch Elm control programs.

We have enclosed extra copies of the pamphlet in the hope that you will pass them along to your Conservation Commission and your local tree warden.

Thank you for your time and attention. If you have further questions, we urge you to contact this office at any time and we shall be happy to cooperate with you in any way possible.

Sincerely yours,

Alfred L. Hawkes

Deputy Inspector of Milk
Laboratory and Office at
Charles V. Chapin Hospital

QUARTERLY REPORT OF THE QUALITY OF MILK SOLD IN PROVIDENCE BY RETAIL DISTRIBUTORS

The following table gives the results of the average of analyses made by this department during the fourth quarter of the year 1965.

No distributor's name is listed under a particular grade of milk unless at least four samples of that grade were analyzed during the quarter. The standard plate count of colonies of bacteria is obtained by using the logarithmic average set forth in the United States Public Health Service Milk Code.

CERTIFIED MILK

The legal standards for Certified Milk are those adopted by the American Association of Medical Milk Commissions, Inc. and in effect at the time of production.

Unless otherwise indicated on the label it shall contain an average of 4.0% of butter fat with a minimum of 3.5% for individual samples and a minimum of 12% of total solids.

The average bacterial count of Pasteurized Certified Milk shall not exceed 500 colonies of bacteria per cubic centimeter.

GRADE A MILK—PASTEURIZED

Grade A Pasteurized milk is produced on farms scoring not less than 85% using the dairy score card of the U. S. Department of Agriculture. The butter fat shall average not less than 3.50% for any four samples taken in a period of not less than 30 days or more than 90 days. The bacteria count shall have a logarithmic average of not greater than 5,000 for any 4 consecutive samples.

The Milk Solids Not Fat shall average 8.50%.

*STANDARD PLATE COUNT—The counts as listed are not all in accord with the "Standard Methods for the Examination of Dairy Products" as at present in force. Inasmuch as Standard Methods tries to overcome human errors as much as possible, only plate counts between 30 and 300 are to be tabulated. Inasmuch as direct plating, without dilution, would render the plate difficult to count through the milk cloud, most dilutions are 1:10 or 1:100. As most of the plates show a count under 30, Standard Methods insists that such plates be listed and averaged as less than 300, (30 times 10), organisms per millilitre. It is our feeling, however, that our method serves as a goal and greater incentive towards purer milk. This heading should preferably read PLATE COUNT.
