QUARTERLY AND ANNUAL REPORT OF THE QUALITY OF MILK SOLD IN PROVIDENCE BY RETAIL DISTRIBUTORS

The following table gives the results of the average of analyses made by this department during the fourth quarter of the year 1952:

No distributor's name is listed under a particular grade of milk unless at least four samples of that grade were analyzed during the quarter. The standard plate count of colonies of bacteria is obtained by using the logarithmic average set forth in the United States Public Health Service Milk Code. While the butterfat standard varies for the different grades of milk the total solids standard of 12 per cent is the same for all grades.

CERTIFIED MILK

The legal standards for Certified Milk are those adopted by the American Association of Medical Milk Commissions, Inc. and in effect at the time of production.

Unless otherwise indicated on the label it shall contain an average of 4.0% of butter fat with a minimum of 3.5% for individual samples.

The average bacterial count of Pasteurized Certified Milk shall not exceed 500 colonies of bacteria per cubic centimeter.

GRADE A MILK—PASTEURIZED

Grade A Pasteurized milk is produced on farms scoring not less than 85% using the dairy score card of the U. S. Department of Agriculture. It shall have been pasteurized within 24 hours of the time of milking and delivered to the consumer within 30 hours after pasteurization. The butter fat shall average not less than 3.50% for any four samples taken in a period of not less than 30 days or more than 90 days. The bacteria count shall have a logarithmic average of not greater than 10,000 for any 4 consecutive samples.
