

CITY DOCUMENT

ANNUAL REPORT

of the

WATER SUPPLY BOARD

of the

CITY OF PROVIDENCE

RHODE ISLAND

For the Year Ended June 30, 1970

ADMINISTRATIVE OFFICE
WATER SUPPLY BOARD
IN CITY COUNCIL

FEB 18 1971

READ:

WHEREUPON IT IS ORDERED THAT
THE SAME BE RECEIVED.

John A. Doherty
CLERK

July 1, 1970

FEB 11 3 08 PM '71
DEPT. OF CITY CLERK
PROVIDENCE, R.I.

TO THE HONORABLE JOSEPH A. DOORLEY, JR., MAYOR
AND THE HONORABLE CITY COUNCIL:

In compliance with Chapter XX of the Charter of the City of Providence, enacted by the General Assembly of the State of Rhode Island at its January Session, A. D. 1940, and approved April 26, 1940, we have the honor to present the thirtieth annual report of the Water Supply Board for the year ended June 30, 1970.

On January 9, 1970, John A. Doherty was reappointed a member of the Board for the ensuing term ending on the first Monday in January, 1974.

At the reorganization meeting held on January 9, 1970, John A. Doherty was reelected Chairman and John J. Deary was reappointed Secretary.

The Board held regular biweekly meetings throughout the year at which careful consideration has been given to the many problems arising in connection with maintenance and operating activities, the Department's financial structure, matters relative to taxes levied on property owned in nearby communities, and other miscellaneous departmental duties which properly come before the Board. Special meetings were held as required throughout the year for consideration of particular problems.

The report of the Chief Engineer with many important tables and statistical data is appended hereto, to which we invite your attention for details and particular information regarding the finances of the Department and conduct of the work during the above period.

Respectfully submitted,

John A. Doherty

WATER SUPPLY BOARD
John A. Doherty, Chairman
Earl H. Ashley

John J. Tierney
David R. McGovern, Ex-Officio

REPORT OF THE CHIEF ENGINEER

Providence, R. I.
July 1, 1970

WATER SUPPLY BOARD CITY OF PROVIDENCE

Gentlemen:

As you know, the fiscal year was changed from the October – September period to July – June. Many of the statistics in this report are for the 12-months July, 1969 – June, 1970; others, such as those applying to financial operations, extensions to the distribution system, installation of services, etc. are for the October, 1969 – June, 1970 “year”.

In the Department’s annual report for the year ended September 30, 1969, it was mentioned that this 1970 report would describe the multimillion-dollar improvements begun in 1966 and completed in 1970. This description, together with information relating to the system’s operation, is presented as follows:

MAJOR CONSTRUCTION PROJECTS

TUNNEL AND AQUEDUCT—The 23,000 feet, 78-inch and the 27,200 feet, 102-inch prestressed reinforced concrete steel cylinder transmission aqueducts, together with tunnel connections from the Purification Plant to the 78-inch and from the 78 to the 102-inch, were completed and disinfected. The total cost amounted to \$14,528,440. (Subject to final audit).

Reinforcement to the Kent County Water Authority system, supplying West Warwick, Coventry and parts of Scituate, is provided by a 30-inch connection from the 78-inch aqueduct to the Authority’s new pumping station on Clinton Avenue in Hope, R. I.

A 96-inch diameter connection was installed at portal No. 4 to receive an additional supply of 56 million gallons daily from the proposed Big and Wood River Reservoir development. A quantity of 44 million gallons daily from our plant and 56 million gallons daily from Big and Wood River, together with the capacity of 100 million

gallons daily through our existing tunnel and aqueduct, will mean an eventual capability of delivering 200 million gallons daily to the system. The 102-inch section of aqueduct from tunnel portal No. 4 to Budlong Road in Cranston is designed to carry 100 million gallons daily; 44 from the 78-inch aqueduct and 56 from Big and Wood River.

There are seven connections off the 102-inch aqueduct:—a 42-inch to increase the supply to the growing City of Warwick system, a 42-inch for the western area of the City of Cranston and the Town of Johnston, a 24-inch in the vicinity of Wilbur Avenue to provide reinforcement to our system in the Oaklawn Avenue area of Cranston, a 42-inch in Budlong Road, Cranston, for the City of East Providence, a 24-inch in the same general area for the Bristol County Water Company and two rider connections, one to our 66-inch steel aqueduct and one to the 42-inch cast iron main in Budlong Road.

ADDITIONS AND IMPROVEMENTS AT THE WATER PURIFICATION WORKS

ADDITIONAL FILTERS—The sand in five of the existing filters was replaced with a coarser size to conform with the material in the other nine units that were changed in 1954. Four additional beds were constructed, bringing the total to 18 units. This will permit processing of 144 million gallons daily at a filtration rate of 3.2 gallons per minute per square foot. This is the full potential that may be withdrawn from the Scituate system based on maximum daily demands.

CENTRALIZED CONTROL SYSTEM—The new centralized control system was completed at the end of the year with the exception of a few final calibrations and adjustments. It replaced the original control board installed in 1939 and monitors and controls the performance of the filter plant, pumping stations, distribution reservoirs, flow measuring stations and other related functions such as the emergency diesel-driven generator located in the new Raw Water Booster Pumping Station. All pumping stations, including the Raw Water Booster Pumping Station at the base of Gainer Memorial Dam in the Town of Scituate as well as the three pumping stations in the distribution system, are unattended and their operation is regulated by a single operator stationed at the control board. Phasing-out of the manned Neutaconkanut Pumping Station permitted us to remove four men from that payroll and transfer two of them to the Purification Plant operational staff which was much in need of qualified personnel to fill existing vacancies. The additions and improvements at the Purification Works amounted to \$2,048,900. (Subject to final audit).

RAW WATER BOOSTER PUMPING STATION—This new facility, built at a cost of \$1,210,481, provides the means necessary to deliver water from Scituate Reservoir to the Purification Works whenever the reservoir level recedes to a point where normal gravity flow will not furnish a sufficient quantity to meet system requirements. The first of these two situations would arise during times of extended drought and the

second would occur with a lowered reservoir during the dry summer months, combined with the demands of the maximum day.

The station has four pumps, two with a capacity of fifty million gallons daily each, driven by either 300 or 600 horsepower motors, and two with a rating of thirty million gallons daily each, driven by 150 or 400 horsepower motors. Based on variable head conditions, eight different rates of flow are possible, from thirty to one hundred and sixty million gallons daily, providing ample flexibility to satisfy varying conditions.

Operation of the switchgear and diesel-driven generator is remotely controlled from the new central control system at the Purification Works. There are 53 command and reportback signals for general start and stop operations, indication of generator fault, overheating of motor windings and bearings and the changeover from public power to our own. This station was placed in service in 1968 and has been inspected daily and test-operated on a weekly basis.

SOURCE OF SUPPLY

RAINFALL AND RUNOFF—The rainfall on the 92.8 square mile Scituate Watershed above Gainer Dam was measured as usual by rainfall gages at Rocky Hill, Hopkins Mills, North Scituate, Westcott District and Gainer Dam. A total of 53.98 inches was recorded, which was 5.75 inches more than the 54-year (July, 1916 — June, 1970) average of 48.23 inches and 85.4% of the maximum of 63.19 inches established during the year ended June 30, 1956. The runoff totaled 25.65 inches; this was 1.23 inches greater than the 54-year average of 24.42 inches and 15.32 inches less than the maximum of 40.97 inches which occurred during the July, 1955 — June, 1956 year.

STORAGE, DRAFT AND YIELD—On July 1, 1969 the combined storage on the watershed, including Regulating, Westconnaug, Barden, Moswansicut, Ponaganset and Scituate Reservoirs, amounted to 40,620,000,000 gallons, or 98.4% of combined total capacity. At the end of the year the combined storage was 40,890,000,000 gallons, or 99.1% of capacity.

The total draft from the Scituate Watershed for the year was 41,121,320,000 gallons, an average of 112,660,000 gallons daily. The draft for water supply purposes was 20,515,560,000 gallons and the discharge into the north branch of the Pawtuxet River totaled 20,605,760,000 gallons.

The yield from the watershed for the year totaled 41,391,320,000 gallons, an average of 113,400,000 gallons per day. This was 5,570,000 gallons per day more than

the 107,830,000 gallons average daily yield for the 54-year period July, 1916 — June, 1970.

FORESTRY OPERATIONS—Management of the Scituate Reservoir Watershed is practiced with the primary aim of insuring the highest quality of raw water from our storage reservoirs. The forest resource is a vital part of our water supply system. The natural filtration properties of the forests marginal to the Scituate and tributary reservoirs provide a continuous supply of pure water.

Protection of our water and forest resources is given priority managerial consideration in water pollution abatement, forest fire control and forest insect and disease problems. The encroachment of suburbia on the watershed has necessitated increased departmental efforts in the surveillance of potential sources of pollution and enforcement of its regulations. To reduce the possible development of major forest fires, provision has been made to equip patrolling inspectors with fire-fighting outfits capable of quickly suppressing small roadside fires. The fire tower on Tunk Hill was manned 34 high-hazard days during the July, 1969 — June, 1970 year.

In keeping with our concern in the field of forest insect and disease control, the department cooperated with the U. S. Forest Service in an extensive survey of Fomes annosus infestations in the many coniferous plantations on the watershed.

Forest-culture operations concentrated on improvement of existing stands of timber, thinning of plantations and aesthetic development of forestland at Gainer Memorial Dam, Barden Reservoir spillway and other roadside sites. Contractual woods operators harvested over one million board feet of timber products consisting of sawlogs, pulpwood and fuelwood. During the year, some form of forest management activity was conducted on an estimated 1500 acres of the City's watershed forests.

Turf management was intensively carried out at the dams, distribution reservoirs and Purification Works. Modern brush control techniques were applied to 32.9 miles of forest access roads, 4.5 miles of roadside fenceline, and other miscellaneous sites. An additional 3.8 miles of forest access roads were cleared or improved by gravelling and grading during the 21-month period October, 1968 — June, 1970. A system of forest access road classification was established and marked in the field. Other operations included the planting of 5000 tree seedlings, salvage of storm damaged trees, roadside slash disposal and maintenance of fencing, gates and other facilities.

LABORATORIES—The chemical and bacteriological laboratories that check the quality of the water supply from the raw water impoundments to the taps at the consumers' premises, conducted tests on more than 13,000 samples during the year. They were obtained from brooks, streams and raw water reservoirs, as well as daily samples collected throughout the distribution system. Tests made on these samples included chemical, sanitary chemical and mineral analyses, and bacteriologic and

microscopic examinations. The total number of tests made during the year (July, 1969 – June, 1970) amounted to 108,796. Based on a 35-hour week, the water was receiving one test or another every 60 seconds.

Chemists carried out frequent coagulation tests of the raw water with various amounts of chemicals, simulating all operations of the purification process for the purpose of determining the most desirable dosage to produce an excellent quality of water at a reasonable cost. Rigid laboratory control over the quality of the water exceeded the sampling requirements of the U. S. Public Health Service Drinking Water Standards. The actual number of bacteriological samples collected from our distribution system amounted to 3,098 or an average of 258 per month, a figure 35% greater than recommended by the Standards and about equal to the number required for a population of 600,000.

PURIFICATION—The water supplied to communities from the Providence system is processed at one of the most modern filtration plants in the country. Operation is all-electric from a central control board. Power loss is minimized and almost nil, due to the availability of three sources: public, hydro-generated and auxiliary diesel-generator.

All chemical feeding machines are automatically controlled in direct proportion to the volume of water being treated. They are installed in multiple units, providing standby machines that may be placed in service in case of mechanical failure. Chemicals are stored in large silos and are transferred pneumatically, by remote control, to hoppers located above each feeder.

The treatment process consists of influent aeration, mixing, coagulation, and finally filtration. Chemicals employed include ferric sulfate to coagulate microorganisms and particles that cause color and turbidity, lime to change the water from acid to alkaline to assist in the precipitation of iron and manganese and reduce corrosion in the distribution system, and chlorine to destroy harmful bacteria. Finally, fluoride is added to reduce the incidence of dental caries in children. The following quantities of chemicals were used during the year (July, 1969 – June, 1970):—1,807,200 pounds of ferric sulfate before influent aeration, 1,980,648 pounds of quicklime after influent aeration and before mixing, 85,091 pounds of chlorine prior to filtration and 240,664 pounds of sodium silicofluoride after filtration, a grand total of 4,113,603 pounds.

During the year, 19,853.48 million gallons were delivered into the distribution system, an average of 54.39 million gallons daily. The maximum hourly demand in the system was at the rate of 137.28 million gallons daily; consumption during the maximum day, July 17, 1969, amounted to 94.04 million gallons. The difference between plant production and system demands was provided from storage reservoirs in our distribution system.

DISTRIBUTION

At the end of the year our distribution system in Providence, Cranston, Johnston and North Providence contained 4,284,104 feet (811.39 miles) of water mains ranging from 6" to 66" in diameter. The network consists of iron, steel, asbestos-cement and reinforced concrete steel cylinder pipe. There were 64,867 services, 16,047 valves and 4,946 hydrants in use on June 30, 1970. The amount of pipe laid during the October, 1969 – June 30, 1970 period totaled 12,131 feet; 1,623 feet were removed, resulting in a net increase to the system of 10,508 feet. Services installed and removed were 404 and 354, respectively, a gain of 50. 58 valves were installed and 14 removed, an addition of 44. 83 hydrants installed and 69 removed resulted in a net increase of 14.

Total water distribution was 19,852.24 million gallons, or 54.39 million gallons per day. The low service area, a gravity supply, consumed 80.9%; the high service system, furnishing water to the higher elevations as well as the special high pressure fire service in the downtown business district of Providence, used 19.1%. Registration on customers' meters totaled 18,177.56 million gallons, accounting for 91.6% of the amount delivered into the system.

Leaks in the transmission and distribution mains totaled 95 during the October, 1969 – June, 1970 year, 20 occurring at joints and 75 as a result of ruptured mains. Leaks at joints averaged one for every 41 miles of pipe and total leaks averaged one for every 9 miles of main. Thirty-four of the 95 leaks were caused by various contractors excavating while performing unrelated work.

The number of meters on active services totaled 65,087. Small size meters in residential properties are brought into our shop every seven years for test and repairs; testing and servicing of larger meters are carried out more frequently.

ENGINEERING OFFICE

The engineering staff has been engaged in the preparation of various specifications and estimates, plans for extensions of the distribution system into numerous real estate developments, and the usual problems related to the operation and maintenance of water works structures and equipment. Other work included real estate surveys, inventories and appraisals, consumer demands with respect to service requirements and proper size meters, inspection of water pipe installations, observing and conducting flow tests at various points in the distribution system and compiling pertinent data and records. Other services included computations of quantities and the preparation of monthly estimates for periodic payments on all outstanding contracts.

During the year, our engineers continued to supervise the construction work which started in 1966. The Raw Water Booster Pumping Station was completed in 1968. The Supplemental Tunnel and Aqueduct, and the Additions, Alterations and Improvements to the Water Purification Works were completed during the past year. This program consisted of twelve separate contracts and represents a capital investment, including \$350,000 for land fees and easements, of \$18,137,821. (Subject to final audit).

The staff has cooperated with officials in East Providence, the Greenville Water District, Cranston and Warwick to expedite connections to our system. Both East Providence and Greenville will be receiving Providence water during the latter part of calendar 1970, East Providence from a 42-inch connection off the new 102-inch aqueduct in Budlong Road, Cranston and the Greenville Water District from a 12-inch connection off our 24-inch prestressed reinforced concrete steel cylinder main in George Waterman Road near Putnam Pike, Johnston. The City of Cranston has prepared plans and specifications for the construction of a pumping station in the vicinity of Aqueduct Reservoir and a 5-million gallon covered underground reservoir in the Lawton Hill area. They have installed several thousand feet of pipe in the western section of the city and upon completion of their pumping and storage facilities will receive Providence water from a 42-inch connection off our 102-inch aqueduct. Warwick is progressing with their transmission system which will be supplied through a 42-inch connection to the 102-inch aqueduct. In addition, plans submitted by the Bristol County Water Company have been reviewed by our engineers.

A contract will be let out for bids during the next fiscal year to remove the electrically-driven 2700 GPM pump from the Neutaconkanut High Service Pumping Station and furnish and install a 7000 GPM pump in its place. This station will then have three electrically-driven units, (two 7000 GPM and one 3800 GPM) and a 7000 GPM gasoline engine-driven pump. The contract also calls for removing the existing 0.5 MGD fire pump at the Purification Plant, and furnishing and installing a 1 MGD unit. In addition to the pump installations at both locations, the contract requires that all necessary appurtenances be furnished and installed.

Neutaconkanut Reservoir was removed from service November 18, 1968. After draining, structural repairs were made to the gate house and roof deck. It was then disinfected, flushed, refilled and returned to service on March 5, 1969.

Bids were received and a contract awarded for the rehabilitation of the superstructures at the Siphon Chamber off Scituate Avenue in Cranston and the Gate Houses at Neutaconkanut Reservoir in Johnston and Longview Reservoir in North Providence.

The work covered repointing, caulking, scrub coating and weather-proofing exterior masonry at the three structures. At the Siphon Chamber the window openings were bricked up, whereas the steel sash at the two gate houses were replaced with aluminum sash and screening. All louvers were replaced with stainless steel units and stainless steel

insect screens. Necessary carpentry work was completed and painting of wood, metal surfaces and pipes, both interior and exterior, together with the interior walls, ceilings and floors was accomplished. The total cost of this work amounted to \$16,000.

COMMERCIAL AND ACCOUNTING

At the end of the fiscal year the department had 64,867 services. To meet the various requirements of our customers, we operated as usual on a 24-hour schedule. This included switchboard operators around the clock and two-way radio communication with our crews in the field. Day to day operations of this division also were carried out during the year, such as reading of meters, notifying customers of excessive water use, preparation of water bills, collection of delinquent accounts, investigating complaints, furnishing information to title companies and banks, processing new applications and preparing payrolls and job cost data.

Conversions of the old style meters to a remote reading system has progressed satisfactorily. During the year (October, 1969 – June, 1970) 2,646 installations were made bringing the total to 10,217 since the program was initiated in May, 1968.

FINANCIAL

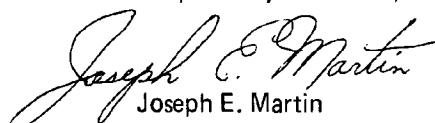

The gross income for the 9-month year (October, 1969 – June, 1970) totaled \$2,549,946.77. Revenue from the sale of water alone amounted to \$2,332,916.90. The remaining income of \$217,029.87 was received from other sources, including hydrant rentals, installation of services and fire supplies, miscellaneous items and the surplus in the Meter Revolving Fund. At the end of the fiscal year, unpaid water bills totaled \$359,125.35, or 12.8% of the total net billing.

Operating expenses continued to increase. The total for the 9-month period amounted to \$1,862,841.65. This item will become greater due to inflation, higher wages and the cost of money to float bond issues such as the one which will be necessary for the new Supplemental Tunnel and Aqueduct.

Principal payments on serial bonds outstanding amounted to \$80,000. Net bonded debt was \$2,650,000 at the close of the fiscal year; interest charges paid during the year came to \$87,425.

Financial accounts of the department, together with other statistical data for the year ended June 30, 1970, are appended to this report.

Respectfully submitted,

Joseph E. Martin
Chief Engineer

APPENDIX

L I S T O F T A B L E S

Table

1. SCITUATE WATERSHED--Monthly Rainfall in Inches--Year Ended June 30, 1970.
2. SCITUATE WATERSHED--Monthly and Yearly Rainfall in Inches for 54 Years, 1916-1969. (Years Ended Sept. 30)
3. SCITUATE WATERSHED--Monthly and Yearly Rainfall in Inches for 54 Years, 1917-1970. (Years Ended June 30)
4. SCITUATE WATERSHED--Monthly and Yearly Runoff in Inches for 54 Years, 1916-1969. (Years Ended Sept. 30)
5. SCITUATE WATERSHED--Monthly and Yearly Runoff in Inches for 54 Years, 1917-1970. (Years Ended June 30)
6. SCITUATE WATERSHED--Monthly and Yearly Percent of Rainfall Collected for 54 Years, 1916-1969. (Years Ended Sept. 30)
7. SCITUATE WATERSHED--Monthly and Yearly Percent of Rainfall Collected for 54 Years, 1917-1970.
8. SCITUATE WATERSHED--Statistics of Storage--Year Ended June 30, 1970.
9. SCITUATE WATERSHED--Monthly Elevations for 42 Years, 1929-1970. (Scituate Reservoir)
10. SCITUATE WATERSHED--Statistics of Draft and Yield--Year Ended June 30, 1970.
11. SCITUATE WATERSHED--Reforestation, Number and Kinds of Trees Planted in Various Years.
12. GAINER DAM--Hydro-Electric Power Generation Statistics.
13. WATER PURIFICATION WORKS--Operating Statistics.
14. WATER PURIFICATION WORKS--Chemicals Used and Their Cost.
15. WATER PURIFICATION WORKS--Chemical and Physical Characteristics of Water in Process of Filtration.
16. WATER PURIFICATION WORKS--Chemical and Physical Characteristics of Water in Various Brooks and Reservoirs on Scituate Watershed.
17. WATER PURIFICATION WORKS--Chemical and Physical Characteristics of Water in the Distribution System.
18. WATER PURIFICATION WORKS--Bacteriologic Examination of Water in Process of Filtration--48 Hours on Agar at 20°C.
19. WATER PURIFICATION WORKS--Bacteriologic Examination of Water in Process of Filtration--24 Hours on Agar at 35°C.
20. WATER PURIFICATION WORKS--Bacteriologic Examination of Water in Process of Filtration--Coliform Bacteria.
21. WATER PURIFICATION WORKS--Bacteriologic Examination of Water in Various Brooks and Reservoirs on Scituate Watershed.
22. WATER PURIFICATION WORKS--Bacteriologic Examination of Water in the Distribution System.

Raw water treated with Ferri-Floc before Influent Aeration.

Quicklime added to Ferri-Floc treated water in conduit to tangential mixer.

Chlorine added to water before filtration.

Sodium Silicofluoride added to water after filtration.

Raw water drawn from lower intake at Gainer Memorial Dam all year.

*Includes \$12,500.00 Tangible Personal.

**In addition to this amount, \$8.25 was paid to the Harmony Fire District.

Notes: City of Providence Fiscal Year changed - now ends on June 30.
 Foster, Johnston and Warwick will be paid in the next fiscal year.
 Scituate was paid three installments.
 West Gloucester Fire District will be paid in the next fiscal year.

Land Areas changed as follows:

Scituate
 Exchange of Property - City of Providence & Town of Scituate:-Elmdale Road

Acquired	0.314 Acre
Reduced	0.836 Acre
Total Reduced By	0.522 Acre

TABLE 58
SUMMARY OF STATISTICS
PROVIDENCE WATER SUPPLY BOARD
YEAR ENDED JUNE 30, 1970

*PROVIDENCE (City or Town)	PROVIDENCE (County)	RHODE ISLAND (State)
GENERAL STATISTICS		
Estimated population of Providence (1970)		176,920
Estimated population supplied in suburbs (1970)		204,331
Total population supplied.		381,251
Date of Construction	1870-76; 1915-28; 1935; 1938-40; 1954; 1960-1962; 1966-1970	
By whom owned		City of Providence
Source of Supply	Surface water collected in Scituate Reservoir and five smaller reservoirs on north branch of Pawtuxet River.	
Available storage capacity of six impounding reservoirs		39,746 m.g.
Mode of Supply		80.9% by gravity; 19.1% by pumping
STATISTICS OF CONSUMPTION OF WATER		
1. Estimated population supplied		381,251
2. Total raw water influent for the year, gallons		20,515,563,000
3. Average daily raw water influent, gallons		56,207,000
4. Raw water consumption per capita, gallons daily		147.4
5. Total consumption for the year, gallons		19,852,240,000
6. Total registration on customers' meters, gallons		18,177,564,000
7. Percentage of consumption accounted for on customers' meters		91.6%
8. Average daily consumption, gallons		54,390,000
9. Per capita consumption, gallons daily		142.7
10. Gallons per day to each tap		838

*Supplying Providence, Cranston, and portions of East Providence, Johnston, North Providence, Warwick, Smithfield, Coventry, West Warwick and Scituate. (All of East Providence will be supplied by the end of 1970).

TABLE 58 (Continued)
 SUMMARY OF STATISTICS
 PROVIDENCE WATER SUPPLY BOARD
 YEAR ENDED JUNE 30, 1970

FILTRATION

1. Type of filters	Rapid Sand
2. Number of filter units	18
3. Capacity of filter plant	18 units @ 8.0=144 m.g.d.
4. Chemicals used	Ferri-Floc, Quicklime, Chlorine and Sodium Silicofluoride
5. Total water filtered during year, gallons	20,025,534,000
6. Average quantity filtered per day, gallons	54,864,000
7. Total filtered water delivered to the distribution system during the year, gallons	19,853,483,000

TRANSMISSION SYSTEM

90-inch Scituate aqueduct (concrete). Also, 78-inch and 102-inch supplemental tunnel and aqueduct (prestressed reinforced concrete steel cylinder pipe).

STATISTICS RELATING TO THE DISTRIBUTION SYSTEM

1. Kind of pipe	Asbestos-Cement, Cast Iron, Steel and Concrete
2. Sizes	From 6 to 66 inches
3. Installed (Oct., 1, 1969-June 30, 1970)	12,130.67 feet
4. Removed (" " " " ")	1,622.64 feet
5. Net Increase (" " " " ")	10,508.03 feet
6. Total now in use	811.39 miles
7. Number of leaks per mile	0.12
8. Range of pressure on mains	14 to 95 pounds
9. Range of pressure on mains (special high pressure fire service)	94 to 130 pounds
10. Number of hydrants installed (Oct. 1, 1969-June 30, 1970)	83
11. Number removed (" " " " ")	69
12. Net increase (" " " " ")	14
13. Number of hydrants now in use	4,946
14. Number of stop gates installed (Oct. 1, 1969-June 30, 1970)	34
15. Number removed (" " " " ")	8
16. Net increase (" " " " ")	26
17. Number of stop gates now in use	11,131

TABLE 58 (Continued)
 SUMMARY OF STATISTICS
 PROVIDENCE WATER SUPPLY BOARD
 YEAR ENDED JUNE 30, 1970

STATISTICS RELATING TO THE DISTRIBUTION SYSTEM
 (Continued)

18. Kind of services	Lead, Copper and Cast Iron
19. Sizes	$\frac{1}{2}$ -inch to 30 inches
20. Number of service taps installed (Oct. 1, 1969-June 30, 1970)	404
21. Number removed (" " " " ")	354
22. Net increase (" " " " ")	50
23. Number of services now in use	*64,867
24. Number of meters installed (Oct. 1, 1969-June 30, 1970)	722
25. Number removed or condemned (" " " " ")	491
26. Net increase (" " " " ")	231
27. Number of meters now in use	**65,087
28. Per cent of services metered	100

*In addition, there is a 30-inch connection off the 78-inch Aqueduct to the Kent County Water Authority pumping station on Clinton Avenue, Hope, R. I.

**Many large services have batteries of meters.
