ANNUAL REPORT
OF THE
SCHOOL COMMITTEE

REPORT OF THE SUPERINTENDENT OF SCHOOLS

TO THE HONORABLE SCHOOL COMMITTEE:

This report for the school year 1958-59 covers a period in which the importance of education as an essential element of national strength has been universally recognized, frequently with anxious concern regarding its effectiveness. In the words of the recent report of the President's Science Advisory Committee,

"The American educational system has been the subject of major concern to Americans throughout our national history. In each generation new educational objectives have been sought and new educational methods designed to achieve them. Each generation has seen new educational achievements, has seen a more adequate adaptation of the educational system to the national needs. But now many of the national needs are changing more rapidly than ever before. The nature of our society has changed as much in the last decade as it once changed in a century.

"No educational system should attempt to meet the changing fancies of each passing hour, and yet it must provide its students with the intellectual tools to meet the problems both of today and of the future. The educational system must always have as its primary objective the development of men and women of noble character and high moral purpose who have also the intellectual capacities and the sense of values to lead fruitful and satisfying lives in modern society. Four specific tasks require special em-

phasis today in the light of our ambitions towards intellectual development.

These are:

"To build well-rounded curricula and in each subject to stress intellectual content and provide for recognition of intellectual achievement.

"To recognize that teaching is a task of primary importance in modern society and therefore to encourage, aid, and reward competent teachers in all fields.

"To recognize that our modern society needs human talents of a wide variety, and that it is essential that every individual be given the maximum opportunity to develop his particular talents to their utmost.

"To understand that the advances of science and technology need special attention to the end that (1) all citizens of modern society acquire reasonable understanding of these subjects, and that (2) those with special talents in these fields have full opportunity to develop such talents."

In the light of this statement, what has been the record of the Providence schools during the past year? I believe that its personnel has been aware of the high challenge. It has been a year of effort, with some success, in adapting the curriculum to new developments and new knowledge, especially in Science and Mathematics. Academically talented youth in the junior high schools have been selected and given accelerated programs. Special assistance has been provided to help teachers, especially those young in service, to increase their effectiveness. Two experiments with educational TV have been carried on. An increase in salaries of personnel, made at the expense of non-salary items, has expressed, as generously as funds permitted, your respect for teachers and gratitude for their service. The adoption of a new salary schedule for administrative and supervisory personnel recognizes the importance of their leadership in the schools and community. The Joslin Street Elementary School will be opened about October 1; sites have been selected and planning begun on the Mary E.

Fogarty School in South Providence, and on the Smith Hill School; the school modernization program continues.

Curriculum Research

It is important that the curricula be constantly studied in order to maintain and strengthen the fundamentals that are to be preserved and to make the modifications required by developments and discoveries in subject matter and by new or changing educational objectives. The study is conducted, under the leadership of the Director of Curriculum Research and the Assistant Superintendents of Elementary and Secondary Education, by a committee of teachers in each subject matter area. These committees also evaluate the text books in their respective fields, and recommend changes when necessary. Sixty-four meetings in all grade levels and all areas were held during the year and the following bulletins were published:

- General Science for Grades 7, 8, and 9
- Science in the Senior High School
- Home Economics, Grades 7, 8, and 9
- Syllabus for Accelerated Classes in Junior High Schools
- Foreign Languages in the Junior and Senior High Schools
- Junior High School Music
- Tentative Guide to Kindergarten
- Home Economics for Senior High School
- Junior High School Social Studies
- Roger Williams and Early Rhode Island

Mathematics and Science

In the fields of Mathematics and Science, startling and revolutionary new developments have necessitated fundamental changes in content and organization. The recent report of the Commission on Mathematics of the College Entrance Examination Board, states that "contemporary mathematics is characterized by:

- 1) a tremendous development quantitatively;
- 2) the introduction of new content;
- 3) the reorganization and extension of older content; and

- 4) renewed, increased, and conscious emphasis upon the view that mathematics is concerned with abstract patterns of thoughts."

The following quotation from "The Pursuit of Excellence," published by the Rockefeller Brothers Fund, summarizes the need for a thorough revision of the mathematics program:

"First, the crisis in our science education is not an invention of the newspapers, or scientists, or the Pentagon. It is a real crisis.

"Second, the U.S.S.R. is not the "cause" of the crisis. The cause of the crisis is our breath-taking movement into a new technological era. The U.S.S.R. has served as a rude stimulus to awaken us to that reality.

"The heart of the matter is that we are moving with headlong speed into a new phase in man's long struggle to control his environment, a phase beside which the industrial revolution may appear as a modest alteration of human affairs. Nuclear energy, exploration of outer space, revolutionary studies of brain functioning, important new work on the living cell—all point to changes so startling as to test to the utmost our adaptive capacities—

"The immediate implications for education may be briefly stated. We need an ample supply of high caliber scientists, mathematicians and engineers—We need quality and we need it in considerable quantity."

I have included these quotations to emphasize the need for new courses of study in mathematics and science. In few periods of history has the need for change been so great or so fundamental.

The revolutionary changes demanded cannot be made immediately. Teachers must learn the new concepts and skills, and gradually modify the program. Sixteen teachers pursued a course held throughout the last year at Brown University which emphasized the changing concepts in mathematical thinking. One of our mathematics teachers has obtained a leave of absence for the year 1959-60 to attend Brown University as a full time graduate student on a scholarship provided by the National Science

Foundation. Another of our mathematics teachers has just completed a course in modern mathematics at Boston College.

In Mathematics, the advanced study of the teachers has influenced their teaching. In the senior high schools new topics have been introduced, new courses offered, and special groups formed to study the revised subject.

In Science, the senior high school science committee completed a guide for biology, chemistry and physics which was distributed in September, 1958. Later in the year the curriculum committee issued a new section to the high school science guide which further revised the physics area, placing more emphasis on principles and the mathematics of physics in line with recommendations made by various science curriculum study groups. Topics were added to the syllabus for a recommended third semester of high school physics for advanced students.

In junior high school science, a new guide was distributed in September, 1958. It made significant changes in the sequence and scope of the general science content in the junior high school. It introduces the more difficult concepts earlier in the program, expands the unit on chemistry, and adds units on atomic energy, rockets, guided missiles and artificial satellites.

A few years ago a course in science was introduced in the elementary grades. The following account of its progress has been prepared by Miss Doris Haslehurst, Elementary Supervisor:

The introduction of the 1954 Science Curriculum to the Elementary Schools presented a challenge to our teachers, for which, I believe, they felt quite inadequate. There were a few science-minded instructors who were already doing commendable work as enrichment; but, for the most part, science was not taught as such.

From a cautious beginning, which was mostly pupil-teacher-book, there has been developed by 1958-59 a lively interest, which now includes observation, experimentation, research and field trips; and which extends from the classroom into the home, the

neighborhood, the community, and the newspaper—even to the front page.

Four elementary schools, (Broad Street, John Howland, Lexington Avenue and Regent Avenue) have held All-School Science Fairs. The exhibits represented not only learning in Science, but were correlated with Art and Social Studies as well. Parents and friends attending made many favorable comments, including Miss Casserly's remark "If this represents science in the Elementary School, then our Junior High School Science Curriculum should be revised."

Teachers from other schools acted as judges at these fairs.

Many classrooms shared their programs with other groups in the school. At Branch Avenue School a 4th and 5th grade room entertained not only their schoolmates, but the children from Benefit Street School as well. The kindergartners at John Howland School explained clearly to their parents the workings of this world of ours. A chance visit to Asa Messer School revealed a 6th grade holding its own Room Science Fair for the rest of the school. Every child worked on some exhibit and the sum total would have done credit as an entire school project, had it been held in the auditorium. At Webster Avenue School a "magic show" was presented using chemicals. I have reason to believe that there were similar science culminations which were not publicized.

I would like to commend the Science Workshop of a year ago as a stimulating and worthwhile experience. I believe that both teachers and pupils worked hard on preparation before it and that there was a spurt of interest and enthusiasm for science after it. However, there is always a cooling-off period and I recommend that there be another such workshop, perhaps including selected pupils, at a future date.

Most of our schools own and use Science Kits and worn-out contents are replaced. In addition, teachers and pupils have contributed much equipment, from discarded eye-glass lenses used as magnifying glasses to space-maps. Also, a use has been found for many waste materials—tin cans, wire, broomsticks, cartons, etc. Whatever the need, children will fill it.

Newer science books are emphasizing experimenting and our schools are well equipped with textbooks of recent date. Science books are also available at neighborhood libraries and children have shared their personal collections with their classmates.

Some very good collections of rocks, shells, leaves, cocoons, moths, butterflies, etc. have turned up in several schools as well as gardens started from seed. In several kindergartens seedlings, carrot tops, or potato sprouts were transplanted to pots for Mother's Day gifts. One third grade class had a flower show. Live turtles, guppies, goldfish, rabbits, and chicks hatched in the classroom have also appeared on the scene.

News items were responsible for stimulating some activities. The Chicago fire brought about a lesson with experiments on air, heat, and combustible materials. Children tried to keep abreast of space travel experiments and, strange to say, they can explain what teachers cannot. Conservation was in the classroom as well as in the newspapers, and men using tools at work inspired a study of machines to make work easier. The bat discovered at South Providence School turned an annoyance into an asset when it was put into a large jar and studied first hand.

Beth Chollar, whom the children knew from WPRO-TV, visited some of the schools and her talks and films on Kindness to Animals were enjoyed. The Channel 2-TV Science Series was considered excellent by teachers and children. Fifth and sixth graders from the following schools took part in this program,—Candace, Fox Point, Gilbert Stuart, John Howland, Lexington, Regent, Reservoir, Ruggles and South Providence.

Our own Audio-Visual Department has contributed to the science program through films and filmstrips. In one school two teachers took the responsibility of getting and showing films every Wednesday morning. Science films were also shown through the courtesy of the New England Telephone and Telegraph Company which also loaned Telezonia equipment.

One of the joys to which children look forward is the school excursion. There have been several. Primary children enjoy the

Zoo trip to Roger Williams Park, Hillside Farm in Cranston, and the Airport. Older children have had science trips to the Weather Bureau, the Telephone Company, and to the Planetarium at Roger Williams Park.

One teacher described the Planetarium visit as "One of the most graphic and well demonstrated astronomy lessons that I have ever seen." The comment of one of his pupils was, "It made hard things easy and dull things interesting."

Our Science Program has a long way to go, but also, it has come a long way. The outlook is good when the elementary student says, "Mother, I won't be directly home from school. We're working on a project and I have to finish the Universe."

Special Opportunities for Children of Exceptional Ability

The challenge to the schools went beyond the field of new or revised subject matter. It directed attention to the importance of identifying the unusually bright students, and providing a program for them appropriate to their ability and promise.

For many years the Providence schools have been concerned with individual differences among children in their classroom work. Special classes for slow learners, ungraded classes for children with irregular progress through the grades, ability grouping in the junior high schools, and differentiated courses in the senior high school have been provided for many years. Hope High School has prepared pupils for admission to college with advanced standing since 1954.

In September, 1958, the schools undertook an experiment with academically talented pupils in two junior high schools. Two classes were organized, one at Nathan Bishop Junior High School, the other at George J. West Junior High School. One additional class entered George J. West Junior High School in January, 1959. Pupils, to be admitted to these classes, were required to have an I.Q. of 130 or better, and to have achieved scores on reading and arithmetic achievement tests at least two grades above the norm for the 7B grade.

The classes in both schools are experimental. The main emphasis in the work was on acceleration; an attempt was made to complete the regular work of the 7th and 8th grades in the first year, to introduce biology and to increase the pace in the second year of the program. French was introduced in the seventh grade. There was delay in beginning the work at both schools, and no accurate judgments can be made regarding the actual time required.

It can be said, however, that it is quite possible for these talented children to complete successfully two years work in one year. The teachers of the groups are, for the most part, enthusiastic about the results. A few quotes from teachers will indicate the general feeling at the end of the experiment's first year:

Mathematics teacher: "Having worked with these youngsters (accelerated) for the past few months has made me fully aware of the injustice done to their equals in the past."

Counselor: "Their originality expressed so freely is a joy to the class and the teacher. New ideas are questioned and discussed as would happen in a meeting of mature minds. My greatest concern is to be eternally alert for signs of fatigue and discouragement."

While almost all of the teachers' comments were favorable, one teacher expressed a word of caution: "What have these children gained and what have they lost this year? On the positive side, it may be safely stated that these gifted children had been intellectually challenged in this program. It can be said that they have been required to do a great deal of work in a short time; they have had to use their abilities to the maximum, and, in addition, have had to acquire the necessary study and organizational skills to keep pace with a rapidly changing and often new subject matter.

"It must be said, however, that this rapid pace, necessary for the covering of the curriculum, has precluded the possibility of depth in the study at any particular point in the curriculum. The demands of the rapid schedule necessitated a superficial approach

in many instances where thorough work would have been a preferred plan.

"Although these children have shown that they are proficient readers with good reading comprehension, and, in many cases, real sensitivity to literature, they have had less success in their written and oral work."

The parents of a small number of pupils have withdrawn them from the experiment. Some parents have expressed concern that the pressure for speed is too intensive. The teacher must guard against the possibility that depth and reflection are sacrificed at the attempt to cover subject matter.

The teachers of these talented children believe in the necessity of providing a special program for them, and in the continuance of the experiment.

At Hope High School the courses designed to prepare students for advanced standing in college had sixty-one students the first term and fifty-six the second term.

Educational TV

Recent experimentation with educational television as a medium of instruction has established it as an instrument of great potential effectiveness. Educators have come to recognize it as a powerful new tool to enrich, broaden and enliven the learning experiences of students.

The use of educational television has grown enormously. In the six years since the first educational television station was established in Houston, Texas, the number of such television stations in operation has grown to thirty-nine, with a dozen more under construction. There are more than 150 closed-circuit installations in schools and colleges throughout the country, and twenty-one military installations use closed-circuit television for instruction and training.

Although the Federal Communications Commission has allocated a UHF band to Rhode Island, the possibility of establishing an educational TV station here seems remote. Fortunately, it

has been possible to participate in the programs prepared by the Eastern Massachusetts Council for School Television, and broadcast over WGBH TV. This body, through its Administrative and Operations Committee establishes program policies. The Massachusetts Executive Committee for School Television, appointed by the Massachusetts State Board of Education, is the legal administrative agent for funds appropriated for school television purposes within the Commonwealth.

During the school year 1958-59, the Providence elementary schools participated in the school programs broadcast by the Massachusetts group. Five programs were broadcast as follows:

Physical Science	Grade Six
Natural Science	Grade Five
Social Studies	Grade Four
Literature	Grade Three
Music	Grade Two

Study guides for all programs were provided. In addition, two kinescoped program series from St. Louis, "Lines and Shapes" and "Here and Now," were broadcast.

Although several schools have no TV sets, and reception at some schools is unsatisfactory, the results of experiment indicate that it should be continued. Twelve elementary schools were selected to evaluate the programs last year with the following result:

Was the Material Directed to the Age and Grade?

Yes 430 No 45

Did the program Enrich the Experience of the Group?

Yes 420 No 56

The programs planned for the current year are very promising. A course in French for elementary grades, a course in Natural Science, a discussion of American foreign policy, and Kinescopes of the President's press conference are planned.

There are now 120 contributing educational agencies, representing a potential audience of over 500,000 children, participat-

ing. The representatives of the project have promised Providence representation on its planning and policy committees.

Television Course in the Humanities for Secondary Schools.

During the year Providence participated in an experiment that demonstrated that educational television, properly planned, can be extremely effective in the study of literature.

At the suggestion of the Fund for the Advancement of Education, established by the Ford Foundation, a group became incorporated as a Council for a Television Course in the Humanities for Secondary Schools. Its job was

- 1) To create a course in the humanities (literature, fine arts, drama, dance, music, etc.) which would replace the conventional third year English course in high schools.
- 2) To produce the course on film for use through educational television stations.
- 3) To attempt, with a pilot series of twelve lesson-films to interest public, parochial and independent schools in pioneering in the cooperative use of such a course.

A group of twenty-six IIA students at Classical High School, taught by Miss Elizabeth J. MacDonald, participated in the course. Clifton Fadiman presented one lecture introducing the course, another lesson introducing drama, and two lessons on *Our Town*. Teaching four lessons on *Hamlet* were Maynard Mack, professor of English, Yale University. Four lessons on *Oedipus the King* were handled by Bernard M. W. Knox, also of Yale.

Portraying the actual drama were some of the world's most respected Shakespearian artists, those appearing at the Shakespearian Theatre in Stratford, Ontario. Students, in addition to watching and listening to television, made notes, took tests, discussed, read required books and plays, and wrote essays.

I have described this experiment at some length, because it illustrates the tremendous possibilities of television in education. Here are some of the appraisals of teachers and pupils:

Teacher: "As a teacher of twenty-eight years' experience I have never enjoyed a project more. I never worked so hard, nor have I ever reaped more satisfaction."

Student: "Although the course was time consuming and often very laborious, the ultimate goal of the course— the stimulation of an interest in the drama not only as art, but also as the study of the Humanities,—has been achieved for this student, at least."

Student: "One achievement of the course, however, stands supreme above the actual knowledge and enlightenment we have gained; the awakening of an avid desire to know more. I feel I must read more Shakespeare, more of the Greek dramatists, more of the contemporary authors. I had started the search for the truth, for my true identity previously, but I know now where the answers lie—in books, in music, in art; the answers can be found in the humanities."

Student: "The most lasting reward derived from the course is the stimulation that is a direct result of studying literature in such a manner (i.e. under such instructors as Professor Mack and Dr. Knox)."

Unfortunately the Ford Foundation has decided not to finance to its completion the entire project of 96 lessons. While we regret its decision, we are grateful for its demonstration of the real possibilities of educational TV.

In-Service Training

As in all professions, continuous improvement on the part of all personnel is not only desirable but necessary. In-service education is meant to include those activities sponsored by the school system itself rather than formal courses taken at colleges and universities.

In the elementary schools, two consultant teachers were appointed to assist teachers, especially beginning and probationary teachers, in their classroom work. These were in addition to the two regular supervisors, Miss Thornton and Miss Haslehurst, who performed brilliantly in the elementary schools.

Miss Elizabeth A. Gibson, one of the consultant teachers was assigned forty-four teachers. With the exception of two teachers, all desired help and cooperated with her. She demonstrated part of the program, gathered material, presented a dramatization of several stories, helped prepare a puppet show, assisted in planning lessons, and brought help, new ideas and recognition to the beginning teachers.

Miss Pauline D. Mullins made 148 classroom visits to 29 probationary teachers, 6 substitute teachers and 5 regular teachers, covering grades one, two and three. She demonstrated teaching methods and motivation in various areas of Arithmetic, Language, Penmanship, Reading, Science and Social Studies. She observed methods of teaching and conferred with teachers on a multitude of problems. She also conferred with principals regarding assistance to teachers and pupils.

In the Junior High Schools, the appointment of Miss Catherine M. Casserly as Supervisor of Junior High Schools resulted in a number of activities designed to improve instruction in the junior high schools. The following report summarizes her work:

The objectives of supervision in the junior high schools during 1958-59 were two-fold: (1) to provide service to teachers and (2) to give recognition for good teaching. The following procedures were used to reach these objectives:

1. An introductory coffee hour was held the second week in September at which forty new teachers chose a time for the first individual conference in his classroom.

2. The individual conferences revealed that teachers wanted materials of instruction such as teachers' manuals, teachers' editions of textbooks, demonstration lessons, and opportunities to see master teachers at work. Each teacher was requested to select a date for a full-period classroom visit for one of three purposes:

- a. to observe a class with which the teacher was having some difficulty.
 - b. to observe a class with which the teacher was having success.
-

c. to observe a class with which the teacher was trying something different.

3. Classroom visits were made within a three-week period so that problems might be detected and progress made toward their solution early in the school year.

4. Followup letters containing commendations and suggestions were sent to each teacher.

The following workshops were held during the year:

1. A workshop at the South Providence Elementary School for seventh grade teachers to help them bridge the gap between elementary and junior high school.

2. An English workshop for all new English teachers at which master teachers of English spoke to the group.

3. A mathematics workshop with emphasis on teaching mathematics to the slower pupils.

4. A science workshop at which master teachers presented demonstrations.

Fifty-seven teachers took part in the in-service workshop program and eighty-five teachers were assisted through classroom visitation.

During the year the Supervisor gave demonstration lessons in science, social studies, English, mathematics, after-school procedures for working with individual pupils, and also assisted long-term substitutes. Several experienced teachers also gave demonstration lessons for new teachers.

In the Senior High Schools, the emphasis on curriculum revision has been described in another section of this report.

Community Cooperation

While a report of this nature must deal with general issues and policies, two instances of cooperation with the community are of unusual interest.

Distributive Education

A Distributive Education Class was inaugurated at Hope High School. This class provides an opportunity for students who are interested in merchandising to spend eight hours per week in the various department stores of Providence in addition to their regular academic program. The initial class has proved to be very successful from the viewpoints of the instructor, Mr. Charles Matoian, and the personnel managers involved. This year's experience suggests success in the future for this activity.

Committee of Consultants on Business Education

To make the curriculum of the business education departments of our high schools more meaningful and realistic, a committee composed of heads of commercial departments and representatives of business and industry in our community has been set up. The members of the committee are as follows:

Representatives from Business

National Association of Accountants, Providence Chapter
Mr. John R. Dolan, National Cash Register Company
Mr. James L. Cavanaugh, Grinnell Corporation
Mr. Joseph E. Kochhan, Brown & Sharpe Manufacturing Company

National Office Management Association, Providence Chapter

Mr. Ernest E. Field, Grinnell Corporation
Mr. Allen M. Newman, B-I-F Industries
Mr. William A. Orme, Jr., General Electric Company

Representatives from the Providence School Department

Miss Mary D. Basso, Supervisor of Guidance & Placement, Chairman
Mr. Theodore Carter, Head of Commercial Dept., Central High School
Miss Mary B. Fenton, Head of Commercial Department, Mount Pleasant High School
Miss M. Barbara Murray, Head of Commercial Department, Hope High School

Mr. Edmund A. Quinn, Assistant Superintendent in charge of Secondary Schools

Mr. Anthony J. Russo, Director of Curriculum Research

Dr. Ralph W. Wilkins, Research Assistant

The committee has held four meetings and we are now awaiting a report from the members of the committee who represent business and industry. This report will not be available until the fall.

The main objective of this committee is to appraise objectively our curriculum in business education both as to courses offered and as to the instructional materials used. We wish to know whether we are teaching the skills best suited to business occupations and which skills are most in demand. Also we wish to ascertain whether the instructional equipment and materials in use in our schools are best suited to prepare students for business occupations.

Another objective is to keep abreast of the changes which are constantly occurring in the field of business education which would apply to procedures, appliances, and other equipment. A third objective would give office managers an opportunity to observe how our schools are preparing students for business occupations in the community.

As an outcome of these meetings the business representatives of the committee have recommended tentatively the possibility of procuring from business concerns commercial machines that would be less obsolete than ours. For example, much of our machinery is twenty years of age or older. These representatives feel that business concerns would be willing to present to the School Department machinery that they are replacing which would be no older than ten years of age. The School Committee has given its approval to the acceptance of business machines of this type and already the Plantations Bank of Providence has presented us with a billing machine which has not been assigned to a particular school as yet.

Department of Physical Plant

This department, in the year just closed, experienced more than its normal portion of activity and excitement. The destruction

of the Administration building by fire on July 25, 1958, a few weeks after the Classical High School Fire; the hasty establishment and emergency functioning of the Administration in new quarters; the impact of the Chicago School fire on our own plant; the gas explosion in a boiler at Lexington Avenue School with its own train of events and investigations; the construction and equipping of the new Joslin School, together with the preliminary planning of the Danforth and Mary E. Fogarty Elementary School—all these events, superimposed on normal functions, served to keep this department operating in high gear.

The following paragraphs describe the activities of the Department of Physical Plant during the past year.

Condition of the Physical Plant

A glance at the annual Survey of School Building Repair and Improvement Needs as of April 1, 1959 shows a total of \$1,506,220 in much needed repairs and \$212,900 in needed improvements. These projects are not chargeable to modernization funds.

Against these needs, the sum of \$400,000. is allotted for the year 1959-60, 23 % of the total required. The remaining 77 % must be deferred. This deferment has been an annual occurrence, and if continued must lead inevitably to a critical situation.

The current allocation has been reduced considerably from its original amount. No repairs and alterations of consequence were executed during the summer, the normal time for large projects. Almost every building, save the two new elementary schools, needs some major repair.

In spite of the perennial shortage of funds, the department has been able to improve somewhat the conditions of several of our poorer buildings. The work done in the school year is described in another section.

Modernization Program

Since November, 1954, when the people voted \$500,000 for school modernization, a "new look" is becoming more evident in our old buildings. To date \$2,500,000 has been voted.

At the outset, only fire protection, new lighting, new sanitary facilities and automatic fuel burners were eligible for inclusion in the program. As time went on it became increasingly evident that these four items were inseparable from other aspects of modernization. Eligibility now applies to asphalt floors, cork tackboard, furniture and heating boilers. Painting is not normally considered as chargeable to modernization.

It can be seen, then, that modernization funds cannot be counted on for taking care of the annual repairs which would normally be required. Thus we are faced with a backlog of major repairs and have insufficient funds to accomplish these repairs.

The modernization program is now proceeding on schedule. Chart A shows the complete status of modernization progress to date.

CHART A

SCHOOL MODERNIZATION PROGRESS AS OF AUGUST 1, 1959

1st Bond Issue	\$ 500,000	voted November, 1954
2nd Bond Issue	\$1,000,000	voted November, 1956
3rd Bond Issue	\$1,000,000	voted June, 1958

Fire Protection

Following the Point St. School fire in 1940, Manufacturers Mutual Fire Insurance Company, as a public service, made a comprehensive survey of all Providence Public Schools. The recommendations in the ensuing report called for installation of automatic sprinklers, non fire resistant buildings as the major protective feature, together with minor changes in structural features for added protection.

All the sprinklers were installed as recommended except at Branch Ave. and Jenkins Street Schools. Because of lack of funds execution of the minor recommendations was deferred.

For the past five years, the schools have been inspected quarterly by officers of the Fire Department and monthly by privates. The standard self-inspection blank was used.

On February 14, 1957 a fire broke out in Classical High School. It was confined to the third floor auditorium. Considerable water damage resulted. The building was cleaned up and put back into use within a week.

On May 6, 1958, Classical was again hit by fire and badly damaged. The Fire Department reported this to be the work of an arsonist, who had shut off the sprinklers before setting the blaze. The building was unusable until repairs were completed in late August.

On July 25, 1958 an arsonist struck again—this time completely destroying the school department Administration Building. Hurred alterations were made in Central High, Annex A, and Veazie St. Schools to house administrative departments. All were in new quarters when school opened in September.

On December 1, 1958 the Chicago School fire took its heavy toll. School and public officials throughout the nation re-assessed their own fire protection measures. Rigorous inspections were made in Providence and the schools were found to be, on the whole, in excellent shape. As a measure of added protection, it was decided to speed up completion of the minor structural changes in

the remaining schools and to improve the already efficient fire warning equipment.

The unexpended balance of the second modernization bond issue was made immediately available for this purpose.

When the first modernization program was approved in 1954, the structural changes recommended by Manufacturers Mutual Fire Insurance Company were included. By the time of the Chicago School fire, the structural changes in sixteen schools had been completed.

Schedule A in this report shows the progress of the additional work, but in essence it is as follows:

Contracts for fire escape rehabilitation at Roosevelt, Candace, Oxford, Messer, Annex A, and Temple St. Schools were awarded on April 20, 1958, and work is now completed.

Contract for sprinkler fire alarm modification in 18 schools was awarded on June 22, 1959. This work is practically complete now.

Contract for installation of sprinklers in Branch and Jenkins Street Schools was awarded on June 22, 1959. Jenkins is about 25% complete and Branch is just being started.

A second contract for sprinkler fire alarm modifications in nine additional schools was awarded on July 7, 1959. This work is proceeding apace.

Contracts for structural changes in Asa Messer, Academy Avenue and Vineyard Street Schools were awarded on July 28, 1959.

Bids were received on August 4, 1959 for sprinkler fire alarm modifications in twenty-four additional schools; also for structural changes in Lexington and Thomas A. Doyle Schools.

When this additional work is completed, Providence schools will be as fire safe as it is humanly possible to make them.

On Saturday, April 18, 1959 an explosion occurred in a gas fired boiler at Lexington Avenue School. The cause of the explosion has not been officially announced at this writing.

As a result of the accident, gas burners in ten buildings were turned off until all had been re-inspected and additional safety measures taken. At this writing all required work has been completed, except for that to be recommended at Lexington and Temple Street Schools. (These schools have burners of the type involved in the explosion.)

New Buildings

This department is now functioning in its normal role in the new building program. It provides technical advice and consultative service to the Administration. It acts as liaison between the School Department and other agencies involved in planning and constructing new buildings.

In addition to the above activities, the department works up educational specifications for the use of architects and engineers. It provides the specifications for all furniture, equipment and educational supplies for new buildings.

Joslin School — This new building will be ready for occupancy in early fall of this year. The contract was awarded on June 17, 1958 to A. C. Beals Inc. This building has a gross floor area of 47,000 sq. ft. and contains 16 regular classrooms, audio-visual room, kindergarten, cafetorium, administrative and accessory areas.

Danforth School — The new Danforth School is in the process of design and will go on the market for bids about December 1, 1959. This building will contain about 40,000 sq. ft., and will have 23 classrooms, kindergarten, audio-visual, administrative and accessory areas. The cafeteria facilities, and auditorium will be in the gymnasium of the Recreation Department's building. This building should be ready for occupancy in the Spring of 1961.

Mary E. Fogarty School — Planning for this school is in the preliminary study stage. No approvals other than land taking have yet to be given by School Committee. The plans for this building should be ready for bids about January 1, 1960 and building should be complete during the summer of 1961.

Conclusion

An annual report of a large school system presents a problem of selection. Of necessity it leaves out many interesting and significant matters. The picture it should portray is of an active organization, conscious of its great responsibility and dedicated to meeting it.

I am grateful to the School Committee for its confidence and cooperation.

Respectfully yours,

JAMES L. HANLEY

Superintendent

September 28, 1959

ANNUAL REPORT
OF THE
SCHOOL COMMITTEE

REPORT OF THE SECRETARY

SCHOOL SYSTEM

During the past year, day schools were maintained as follows:

Senior high	4

**SUMMARY OF EXPENDITURES
FOR SCHOOL YEAR ENDING JUNE 30, 1959**

Expended from current revenue:

By school committee:

General control	\$ 423,031.22
Instruction	7,290,303.35
Operation of school plant	1,416,118.03
Maintenance of school plant	636,389.18
Auxiliary agencies	312,640.67
Capital outlay	15,301.20
Fixed charges	432,730.39
	\$10,526,514.04

By city council:

Interest	\$ 235,679.06
Sinking funds	498,819.36
	\$ 734,498.42

**Maintenance and Per Capita Cost
For School Year Ending June 30**

(Not including expenditures by the City Council)

Expenditures are charged to the separate schools, as far as possible; including: salaries of teachers, clerks, and custodians; books, supplies, fuel, light and power, water, furniture, repairs, alterations, and incidentals.

They do not include the general expenses such as salaries of the superintendent and his assistants, directors, supervisors and their assistants, secretary, purchasing agent, truant officer, clerks, and items not chargeable to any school.

1958 — 1959*

Schools	Amount Charged	Average Membership	Cost Per Capita	Cost Per Capita Inc. General Expenses
