Mrs. Rose Mendonca
City Clerk
City Hall
Providence, Rhode Island

Dear Mrs. Mendonca:

I am enclosing a copy of the Annual Report of the Water Supply Board for the fiscal year ended June 30, 1982

Twenty copies are being forwarded to your office for presentation to the Members of the City Council at the next scheduled meeting.

Very truly yours,

A handwritten signature in black ink, appearing to read "Wiley J. Archer".

ADMINISTRATIVE OFFICE

**Water Supply Board
City of Providence**

July 1, 1982

To the Honorable Vincent A. Cianci, Jr., Mayor
and the Honorable City Council:

In compliance with Chapter XX of the Charter of the City of Providence enacted by the General Assembly of the State of Rhode Island at its January Session, A.D. 1940, and approved April 26, 1940, we have the honor to present the forty-second annual report of the Water Supply Board, for the year ended June 30, 1982.

At a reorganization meeting held on January 29, 1982, Richard A. Carroll was reelected Chairman and Robert F. Howard was elected Vice Chairman. James A. Lombardi was reappointed Secretary.

On February 18, 1982, Daniel A. Triangolo was appointed a member of the Board to fill the vacancy brought about by the death of Alfred T. Ciccone.

The Board held regular weekly meetings throughout the year at which careful consideration was given to the many problems arising in connection with maintenance and operating activities, the department's financial structure, matters relative to taxes levied on property owned in nearby communities, and other departmental duties which properly come before the Board. Special meetings were held as required throughout the year for consideration of particular problems.

The report of the Chief Engineer is appended hereto. It contains important tables and statistical data to which we invite your attention for details and particular information regarding the finances of the department and conduct of the work during the above period.

Respectfully submitted,

A handwritten signature in cursive ink, appearing to read "Richard A. Carroll".

REPORT OF THE CHIEF ENGINEER

Providence, R.I.
July 1, 1982

WATER SUPPLY BOARD CITY OF PROVIDENCE

Gentlemen:

The following is the report of the Providence Water System for the fiscal year ended June 30, 1982.

Precipitation on the 92.8 square mile drainage area this past year amounted to 58.82 inches; this was 20.45 inches more than the total of 38.37 for the 1981 year and 8.64 less than the maximum of record . . . 67.46 inches which occurred during the year ended June 30, 1973. Runoff totaled 31.15 inches compared with 13.08 for the previous year and the 40.97 inches maximum of record for the fiscal 1956.

Consumption decreased to 62,437,000 gallons per day, down 3,850,000 gallons per day from the June 30, 1981 figure of 66,287,000 gallons. The maximum day's use was 103,679,000 gallons on July 9, 1981, the highest hourly rate that day being 165,240,000 gallons per day. These quantities compare with 66-year highs of 129,739,000 gallons and 192,624,000 gallons per day maximum hourly rate established July 21, 1980.

Water sold to the Kent County Water Authority, the City of Cranston (for distribution to its western section and southwestern Johnston), Warwick, East Providence, East Smithfield Water Company, Smithfield Water Department and the Greenville Water District totaled 7,109,902,812 gallons, an average of 19,479,186 gallons per day. These seven wholesale customers accounted for 31.20% of the total consumption. Summaries relating to quantities metered to these users are shown in Tables 36, 37 and 38 of the Appendix.

The department's two 16-millimeter sound films in color entitled "Pipeline for Tomorrow" and "Pure Water - Lifeline of Providence," were shown to groups during visits to the Philip J. Holton Water Purification Works. The first of the two, a pictorial review of the Major Construction Projects completed in 1970, was viewed mainly by student and professional engineers. The other film also was screened for these people, in addition to showings for lay persons and those students having a general interest in water supply. It describes the source of supply, forestry operations, the collection, treatment, transmission, distribution and pumping of the water, together with engineering activities, maintenance and servicing, metering and billing.

SOURCE OF SUPPLY

RAINFALL AND RUNOFF The rainfall on the 92.8 square mile Scituate watershed above Gainer Memorial Dam was measured by rainfall gauges at Rocky Hill, Hopkins Mills, North Scituate, Westcott District and Gainer Dam. A total of 58.82 inches was recorded which was 9.52 inches more than the 66-year (July 1916 - June 1982) average of 49.30 inches and 87.2% of the maximum, 67.46 inches, which occurred during the year ended June 30, 1973. The runoff totaled 31.15 inches; this was 6.20 inches more than the 66-year average of 24.94 inches and 76.0% of the maximum, 40.97 inches, which occurred during July 1955 - June 1956 year.

STORAGE, DRAFT AND YIELD On July 1, 1981 the combined storage on the watershed including Regulating, Westconnaug, Barden, Moswansicut, Ponaganset and Scituate Reservoirs amounted to 32,806,000,000 gallons or 79.5% of capacity. At the end of the year, the combined storage was 42,288,000,000 gallons or 102.5% of capacity.

The total draft from the Scituate watershed for the year was 40,733,450,000 gallons, an average of 111,600,000 gallons daily. The draft for water supply purposes was 23,656,340,000 gallons and discharge into the north branch of the Pawtuxet River totaled 17,077,110,000 gallons.

The yield from the watershed for the year totaled 50,215,450,000 gallons, an average of 137,580,000 gallons per day. This was 27,410,000 gallons per day more than the 110,170,000 gallons average daily yield for the 66-year period July 1916 - June 1982.

WATERSHED MANAGEMENT - FORESTRY OPERATIONS Water quality and the protection of valued water resources remains the cornerstone of management on the Scituate Reservoir watershed. Departmentally owned woodlands surrounding the Scituate Reservoir and its five tributary reservoirs help to maintain and insure runoff of high quality.

Seventy-five percent of the watershed, however, is privately owned, and land-use practices on these 68.87 square miles in five communities are a major concern. Much of this area is characterized by wetlands and soils with high water tables. A diminishing availability of open land increases the pressure to develop areas of marginal suitability. The department monitors any land use or alteration which may impact on the quality of water entering streams tributary to the reservoir system.

The department is monitoring ongoing studies of proposed corridors/designs for the upgrading of local and interstate roadways to assure that concerns regarding water quality impacts from such proposals are addressed.

Ten incidents of spills involving fuel oil, waste oil, or gasoline were known to occur on the watershed during the year. The sources of the spills included road accidents, private

businesses, and private homes. One incident of groundwater well contamination was discovered on the watershed in October 1981. State and local authorities assisted in cleanup and resolution of the incident which originated from deteriorating and leaking underground fuel tanks associated with an out-of-business service station. On February 21, 1982 a Pilgrim Airlines de Havilland twin-engine Otter made an emergency crash landing on Scituate Reservoir. Due to the thickness of the ice cover on the reservoir, the fire following the crash, and cleanup activities, no problems were encountered with contamination of the reservoir.

Departmental enforcement activities on the watershed, aqueducts, and distribution reservoirs yielded a total of 581 violation incidents. Prosecutions numbered 30. Acts of vandalism accounted for 56 percent of total violations with significant damage done to the facility at the Tunk Hill Fire Tower. Off-road vehicle impacts continue on aqueduct lands and upon certain sections of watershed property.

A wet spring resulted in a minimal number of high-hazard fire days during the spring of 1982. Tunk Hill Fire Tower was operated 26 days. Seven small fires occurred on departmental lands during the year, of which only one was reported on watershed property.

Gypsy moth (*Lymantria dispar* L.) infestations again enveloped portions of the watershed forest in 1982. Levels of infestation were generally lower and not as widespread as in 1981. In cooperation with the R.I. Department of Environmental Management, the U.S. Forest Service and local communities, 1,450 acres of watershed forests were included in aerial-spray control measures using the insecticide, carbaryl. Forest areas sprayed were selected based on egg-mass survey counts and forest stands where significant damage to high quality hardwoods or understory conifers was anticipated. Areas treated occurred in the southern and western portions of the watershed where preliminary estimates predicted extensive damage and mortality to understory white pine, hemlock, and spruce. Valuable high-quality hardwood stands in these areas were treated to lessen the impact of two consecutive years of defoliation. Gypsy-moth populations are not expected to be high on the watershed in 1983. Endemic levels of other forest insect and disease populations continue to be monitored by the department's foresters.

Forest-culture operations were limited to reforestation and contractual cordwood harvest. Low-quality hardwoods were removed from forest stands to provide for release of understory white pine. Reforestation efforts centered on low-quality hardwood sites where white pine, hemlock, and Norway spruce were underplanted to create resource diversity.

Turfed areas at the Purification Works, Gainer Dam, Rockland Cemetery, distribution reservoirs, aqueducts, pumping stations and other facilities received necessary maintenance. Downstream areas at Ponaganset Reservoir were cleared of tree-vegetative growth in response to Phase I Corps of Engineers studies. Various other operations included repair of vandalized structures and facilities; installation, maintenance, and repair of fencing, gates, and no-trespass signs; and routine maintenance of pipelines, firelanes, and grounds.

LABORATORIES The chemical and bacteriological laboratories that check the quality of the water supply from the raw water impoundments to the taps at the consumers'

premises conducted tests on approximately 13,000 samples during the year. They were obtained from brooks, streams and raw water reservoirs, as well as daily samples collected throughout the distribution system. Tests made on these samples included chemical, sanitary chemical and mineral analyses, and bacteriological and microscopic examinations.

Chemists carried out coagulation tests on raw water with various amounts of chemicals, simulating all operations of the purification process for the purpose of determining the most desirable dosage to produce an excellent quality of water at a reasonable cost. Rigid laboratory control over the quality of the water exceeded the sampling requirements of the U.S.E.P.A. Primary Drinking Water Regulations. The actual number of bacteriological samples collected from our distribution system amounted to 3,033, an average of 253 per month. A re-evaluation of our Brook and Stream sampling program was initiated, aided by a report prepared for the Water Supply Board entitled **Stream Sampling on the Scituate Reservoir Watershed** by Kenneth Lynk (February, 1982).

PURIFICATION The water supplied to the communities from the Providence system is processed at one of the most modern filtration plants in the country. Operation is all electric from a centralized control system. Power loss is minimized and almost nil, due to the availability of three sources . . . public, hydro-generated and auxiliary diesel generator.

All chemical feeding machines are automatically controlled in direct proportion to the volume of water being treated. They are installed in multiple units, providing standby machines that may be placed in service in case of mechanical failure. Ferri-Floc and quicklime are stored in large silos and are transferred pneumatically, by remote control, to hoppers located above each feeder. Sodium silicofluoride is received in 400-pound drums and is conveyed pneumatically to collectors above the fluoridizers. Chlorine is handled in one-ton containers which are stored in a room directly above the chlorinizers.

The treatment process consists of influent aeration, mixing, coagulation and finally, filtration. Chemicals employed include Ferri-Floc (ferric sulfate) to coagulate micro-organisms and particles that cause color and turbidity, lime to change the water from acid to alkaline to assist in the precipitation of iron and manganese and reduce corrosion in the distribution system, and chlorine to destroy harmful bacteria. Finally, fluoride is added to reduce the incidence of dental caries in children. The following quantities of chemicals were used during the year (July 1981 - June 1982): 2,630,117 pounds of Ferri-Floc before influent aeration, 2,443,639 pounds of quicklime after influent aeration and before mixing, 98,308 pounds of chlorine prior to filtration and 275,410 pounds of sodium silicofluoride after filtration . . . a grand total of 5,447,474 pounds.

During the year, 22,787.80 million gallons were delivered into the distribution system, an average of 62.43 million gallons daily. The maximum hourly demand in the system was at a rate of 165.24 million gallons daily; consumption during the maximum day, July 9, 1981, amounted to 103.68 million gallons. The difference between plant production and system demand was provided from storage reservoirs on our distribution system.

Improvements made at the Purification Works included the complete revamping of the existing heating system within the Filter Gallery. During the winter of 1981-1982 the old heating system was completely abandoned in favor of more modern, practical and efficient units.

DISTRIBUTION

At the end of the year the Water Supply Board distribution system in Providence, Cranston, Johnston and North Providence contained 4,548,994.93 feet (861.45 miles) of water mains ranging from 6-inches to 66-inches in diameter. The network consists of iron, steel, asbestos-cement and reinforced concrete steel cylinder pipe. There were 69,323 services, 17,134 valves and 5,191 hydrants in use on June 30, 1982.

The amount of pipe laid during the year totaled 4,408.82 feet; 1,819.83 feet were removed, resulting in a net increase to the system of 2,588.99 feet. Services installed and removed were 240 and 46 respectively, a gain of 194. There was an increase of 39 valves, 48 having been installed and 9 removed. The number of meters on active services totaled 70,055.

Total water distribution was 22,789.44 million gallons or 62.44 million gallons per day. The low service, a gravity supply, consumed 74.0%; the high service system, furnishing water to the higher elevations as well as the special high pressure fire service in the downtown business district of Providence, used 26.0%. Registration on customers' meters totaled 20,392.11 million gallons, accounting for 89.5% of the amount distributed.

Leaks in the transmission and distribution mains totaled 70 during the year, 23 occurring at joints and 47 as a result of ruptured mains. Leaks at joints averaged one for every 37 miles of pipe and total leaks averaged one for every 12 miles of main. Of the 70 leaks, 2 were caused by various contractors excavating while performing unrelated work.

ENGINEERING

The engineering staff has been engaged in the preparation of various specifications and estimates, plans for extensions of the distribution system into real estate developments, including domestic and fire services, and problems related to the operation and maintenance of water works structures and equipment. Work included real estate surveys, inventories and appraisals, consumer demands with respect to service requirements and proper size meters, inspection of water pipe installations, observing and conducting flow

tests at various points in the distribution system, electrical energy conservation studies and compiling pertinent data and records. Services included computations of quantities and preparation of monthly estimates for periodic payments on all outstanding contracts.

Construction of the new 24-inch high service force main from Neutaconkanut Pumping Station in Johnston to Longview Reservoir in North Providence has been completed. It is anticipated that work on the discharge manifold will commence in the fall.

Work on the Dean Estates Booster Pumping Station in Cranston is nearing completion and the station will be put into operation in the coming year.

COMMERCIAL AND ACCOUNTING

At the end of the fiscal year the Water Supply Board had 69,323 services. To meet the various requirements of our customers, we operated as usual on a 24-hour schedule. This included switchboard operators around the clock and two-way radio communication with our crews in the field. Day to day operations of the division also were carried out during the year such as reading of meters, preparation of water bills, collection of delinquent accounts, investigating complaints, furnishing information to title companies and banks, processing new applications and preparing payrolls and job cost data.

FINANCIAL

The gross income for the year totaled \$8,780,779.82. Revenue from sale of water alone amounted to \$8,187,648.26. The remaining income of \$593,131.56 was received from other sources, including hydrant rentals, installation of services and fire supplies, and

miscellaneous items. At the end of the year unpaid water bills for all previous and the present year totaled \$1,769,579.29 or 19.9% of this year's total net billing.

Expenses for the year, including principal payments of \$370,000.00 on serial bonds outstanding and \$592,483.75 in interest charges, amounted to \$7,758,874.27 . . . down \$204,920.93 from the previous year. Bonded debt at the close of the year was \$10,325,000.00.

It is anticipated that for the year ending June 30, 1983 expenses will rise substantially due to higher material costs, higher wages and fringe benefits, and higher energy costs.

Financial accounts of the department, together with other statistical data for the year ended June 30, 1982, are appended to this report.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Wiley J. Archer".

Raw water treated with Ferri-Floc before Influent Aeration.

Quicklime added to Ferri-Floc treated water in conduit to tangential mixer.

Chlorine added to water before filtration.

Sodium Silicofluoride added to water after filtration.

Raw water drawn from lower intake at Gainer Memorial Dam all year.

TABLE 40
FINANCIAL STATEMENT**
YEAR ENDED JUNE 30, 1982

Operating Revenue	
Sale of Water	\$8,187,648.26
Hydrant Rental	335,108.58
Setting Meters	3,597.50
Installation of Services	118,376.09
Installation of Mains	27,100.10
Meter Repairs	<u>3,990.00</u>
Total Operating Revenue	\$8,675,820.53
Operating Expenses	
Administration	\$1,052,842.42
Commercial	791,255.58
Operations	2,503,989.67
Planning & Engineering	347,148.92
Property Taxes	1,621,489.57
Contributions to Retirement	317,616.00
Federal Old Age	<u>162,048.36</u>
Total Operating Expenses	*\$6,796,390.52
Operating Income	\$1,879,430.01
Add Non-Operating Income	
Rental of Property	\$ 4,959.87
Miscellaneous	<u>99,999.42</u>
Total Non-Operating Income	\$ 104,959.29
Sub-Total	\$1,984,389.30
Less Non-Operating Expenses	
Interest on Bonded Debt	\$ 592,483.75
Retirement of Bonds	<u>370,000.00</u>
Total Non-Operating Expenses	\$ 962,483.75
SURPLUS	\$1,021,905.55

*See Table 41 for detailed account of Operating Expenses.
**Unaudited

Receipts - July 1, 1981 to June 30, 1982	46,974.47
Total Available	<hr/> \$ 68,210.99
Expenditures July 1, 1981 to June 30, 1982	<hr/> 41,875.52
Total Disbursements	41,875.52
Unencumbered Balance - June 30, 1982	<hr/> \$ 26,335.47

TABLE 46
TAXES PAID TO VARIOUS CITIES & TOWNS
July 1, 1981 to June 30, 1982

Location of Property	Land Area (Acres)	ASSESSED VALUATIONS			TAX	
		Land	Buildings and Improvements	Total	Rate per \$100	Amount Paid
City of Warwick	0.060	\$ 450.00	\$ 0	\$ 450.00	\$---	\$ ---
City of Cranston	110.627	62,840.00	1,241,240.00	1,304,080.00	8.26	107,756.15
Town of Foster	1,617.470	1,993,300.00	0	1,993,300.00	3.84	76,542.72
Town of Gloucester	73.300	20,665.00	0	20,665.00	8.75	1,862.43
Town of Johnston	103.130	42,163.00	321,937.00	364,100.00	7.63	14,064.26
Town of North Providence	8.529	29,880.00	185,100.00	214,980.00	3.90	8,384.22
Town of Scituate	13,149.030	24,392,250.00	15,219,680.00	*42,770,060.00	3.30	1,411,411.98
Town of West Warwick	8.940	32,955.00	0	32,955.00	7.57	2,569.54
Total Real Estate	15,071.086			\$ 46,700,590.00		**\$1,622,591.30

*Includes \$3,158,130.00 Tangible Personal.

**In addition to this amount \$91.97 was paid to West Gloucester Fire District and \$21.50 to the Harmony Fire District.

NOTE: Taxes paid to the Town of Johnston were for 1980 and 1981. A yearly credit of \$20,000.00 was applied to the tax bills as a result of the sale of water lines to the Town.

TABLE 47
SUMMARY OF STATISTICS
PROVIDENCE WATER SUPPLY BOARD
YEAR ENDED JUNE 30, 1982

*PROVIDENCE (City or Town)	PROVIDENCE (County)	RHODE ISLAND (State)
GENERAL STATISTICS		
Population of Providence (1980 Federal Census)		156,421
Estimated population supplied in suburbs		293,579
Total population supplied		450,000
Date of Construction	1870-76; 1915-28; 1935; 1938-40; 1954; 1960-1962; 1966-1970	
By whom owned		City of Providence
Source of Supply	Surface water collected in Scituate Reservoir and five smaller reservoirs on north branch of Pawtuxet River.	
Available storage capacity of six impounding reservoirs		39,746 m.g.
Mode of Supply	74.0% by gravity; 26.0% by pumping	
STATISTICS OF CONSUMPTION OF WATER		
1. Estimated population supplied		450,000
2. Total raw water influent for the year, gallons		23,656,327,000
3. Average daily raw water influent, gallons		64,812,000
4. Raw water consumption per capita, gallons daily		144.0
5. Total consumption for the year, gallons		22,789,442,000
6. Total registration on customers' meters, gallons		20,392,113,195
7. Percentage of consumption accounted for on customers' meters		89.5%
8. Average daily consumption, gallons		62,437,000
9. Per capita consumption, gallons daily		138.7
10. Gallons per day to each tap		956

*Supplying Providence, Cranston, East Providence and portions of Johnston, North Providence, Warwick, Smithfield, Greenville, Coventry, West Warwick and Scituate.

TABLE 47 (Continued)
 SUMMARY OF STATISTICS
 PROVIDENCE WATER SUPPLY BOARD
 YEAR ENDED JUNE 30, 1982

FILTRATION

1. Type of filters	Rapid Sand
2. Number of filter units	18
3. Capacity of filter plant	18 units @ 8.0=144 m.g.d.
4. Chemicals	Ferri-Floc, Quicklime, Chlorine and Sodium Silicofluoride
5. Total water filtered during year, gallons	23,103,973,000
6. Average quantity filtered per day, gallons	63,299,000
7. Total filtered water delivered to the distribution system during the year, gallons	22,787,802,000

TRANSMISSION SYSTEM

90-inch Scituate aqueduct (concrete). Also, 78-inch and 102-inch supplemental tunnel and aqueduct (prestressed reinforced concrete steel cylinder pipe).

STATISTICS RELATING TO THE DISTRIBUTION SYSTEM

1. Kind of pipe	Asbestos-Cement, Cast Iron, Ductile Iron, Steel and Concrete
2. Sizes	From .6 to 66 inches
3. Installed	4,408.82 feet
4. Removed	1,819.83 feet
5. Net increase	2,588.99 feet
6. Total now in use	861.45 miles
7. Number of leaks per mile	0.08
8. Range of pressure on mains	14 to 95 pounds
9. Range of pressure on mains (special high pressure fire service)	94 to 130 pounds
10. Number of hydrants installed	70
11. Number removed	70
12. Net increase	0
13. Number of hydrants now in use	5,191
14. Number of stop gates installed	48
15. Number removed	9
16. Net increase	39
17. Number of stop gates now in use	11,872

TABLE 47 (Continued)
SUMMARY OF STATISTICS
PROVIDENCE WATER SUPPLY BOARD
YEAR ENDED JUNE 30, 1982
STATISTICS RELATING TO THE DISTRIBUTION SYSTEM
(Continued)

18. Kind of services	Brass, Lead, Copper, Cast Iron and Ductile Iron
19. Sizes	$\frac{1}{2}$ -inch to 42 inches
20. Number of service taps installed	240
21. Number removed	46
22. Net increase	194
23. Number of services now in use	69,323
24. Number of meters installed	283
25. Number removed or condemned	55
26. Net increase	228
27. Number of meters now in use	*70,055
28. Per cent of services metered	100

*Many large services have batteries of meters.

YEAR ENDED JUNE 30, 1982

COMPARISON OF PROVIDENCE DISTRIBUTION
SYSTEM WATER CHARACTERISTICS WITH
E.P.A. REGULATIONSE.P.A. Regulations
(Maximum Permissible)

Physical Characteristics:

*Color	15 units	4
Turbidity	1 unit	0.2
*Odor	3 threshold number	no odor
Taste	----	no taste

Characteristics (milligrams per liter)

Arsenic	0.05	less than 0.005
Barium	1.	less than 0.02
Cadmium	0.010	less than 0.002
Chromium	0.05	less than 0.02
*Copper	1.	less than 0.02
Fluoride	2.0	0.99
*Iron	0.30	0.06
Lead	0.05	less than 0.005
Mercury	0.002	less than 0.001
*Foaming Agents	0.05	less than 0.1
Nickel	----	less than 0.02
Nitrate (as N)	10.	0.04
Potassium	----	0.8
Selenium	0.01	less than 0.005
Silver	0.05	less than 0.02
Sodium	----	8.
*Total Dissolved Solids	500.	71.
*Zinc	5.	less than 0.02

Characteristics

Total Trihalomethanes (micrograms per liter)	100.	7.7 p.p.b.
Aldrin	----	less than 0.2 p.p.b.
Chlordane	----	less than 2. p.p.b.
DDT	----	less than 1. p.p.b.
Dieldrin	----	less than 0.06 p.p.b.
**Endrin (micrograms per liter)	0.2	less than 0.2 p.p.b.
Heptachlor	----	less than 0.1 p.p.b.
Heptachlor Epoxide	----	less than 0.1 p.p.b.
**Lindane (micrograms per liter)	4.	less than 1. p.p.b.
**Methoxychlor (micrograms per liter)	100.	less than 3. p.p.b.
**Toxaphene (micrograms per liter)	5.	less than 5. p.p.b.
**2,4-D (micrograms per liter)	100.	less than 0.05 p.p.m.
**2,4,5-TP Silvex (micrograms per liter)	10.	less than 0.005 p.p.m.

*E.P.A. Secondary Regulations (Federal Register, Vol. 42, No. 62, p. 171433/31/77)
based on aesthetic consideration and not MCL's (Maximum Contaminant Levels) as set forth in E.P.A. Interim Primary Drinking Water Regulations.

**Drinking water standard at time of analysis.

NOTE: p.p.b. {parts per billion}
p.p.m. {parts per million}
